# TABLE OF CONTENT

Table of Contents .....	i
List of Statistical Tables .....	iii
Abbreviations .....	xv
 Chapter I Background of the Survey .....	 1
1.1 Introduction .....	1
1.2 Objectives of the Survey .....	2
1.3 Contents the Survey Questionnaire .....	3
1.4 Definition of Key Concepts and Terms .....	5
1.5 Limitation of the Survey .....	6
1.6 Training of Field Staffs.....	7
1.7 Organization of the Field Work .....	8
1.8 Organization of the Report.....	9
1.9 Data Processing .....	9
 Chapter II Survey Methodology and Data Processing .....	 11
2.1 Coverage.....	11
2.2 Sampling Frame .....	11
2.3 Sample Design .....	11
2.4 Sample Size and Selection Scheme .....	12
 Chapter III Size and Socio- Demographic Characteristics of the Population ---	 17
3.1 Introduction .....	17
3.2 Population Distribution Size and Distribution.....	17
3.3 Population Characteristics .....	18
 Chapter IV Economic Activity Status .....	 83
4.1 Introduction .....	83
4.2 Data Collection Approaches .....	84
4.2.1 Current Activity Status Approach .....	85
4.2.2 Usual Activity Status Approach.....	85
4.3 Current Activity Status .....	86
4.4 Economically Active and Not-Active Population and Activity Rate ----	87
 Chapter V Characteristics of the Employed Population.....	 133
5.1 Introduction.....	133
5.2 Employment to Population Ratio .....	133
5.3 Occupation and Industry .....	134
5.4 Status in Employment .....	135
5.5 Number of Hours Worked.....	135
5.6 Earning from Paid Employment.....	137
5.7 Absence from Work.....	138
5.8 Labour Mobility and Job Satisfaction .....	138
5.9 Availability to Work Additional Hours.....	139
5.10 Formal and Informal Employment Sectors of the economic activity	139

Chapter V I	Characteristics of Unemployed Population .....	319
6.1	Introduction .....	319
6.2	Measurement of Unemployment .....	320
6.3	Unemployment Rate.....	322
6.4	Characteristics of Unemployed Population .....	323
Annex I	Survey Questionnaire .....	449
Annex II	Estimation Procedures of Total, Ratio and Sampling Errors.....	455
Annex III	Estimates and CV's for Selected Tables.....	459
References.....		462

ILO- International Labour Organization

CSPRO- Census and Survey Processing system

ISCO- International Standard Classification of occupation

ISIC- International Standard Industrial Classification of all economic activities

ICLS- International Conference on Labour Statistics

KILM- Key Indicators of Labour Market

MDGs- Millennium Development Goals

NIHSP- national Integrated Household Survey Program

NLFS - National Labour Force Survey

NS- Not Stated

NOIC- National Occupation and Industrial Classification

PASDEP- Plan for Accelerated and Sustained Development to End Poverty

PSU- Primary Sampling Unit

RLFS- Rural Labour Force Survey

SNA- System of National Account

SNNPR- southern Nations, Nationalities and peoples Region

TVET- Technical Vocational Educational Training

# **CHAPTER I**

## **BACKGROUND TO THE SURVEY**

### **1.1 Introduction**

Statistical information on all aspects of the population is vital for the design, implementation, monitoring and evaluation of economic and social development plan and policy issues. Labour force survey is among the important sources of data to assess the participation of the population in the economic and social development process of the country. It is useful to indicate the extent of available and unutilized human resources that must be absorbed by the national economy to ensure full employment and economic well being of the population. The survey provides data on the main characteristics of the work force engaged or available to be engaged in productive activities during the given reference period and the distribution of employed population in the various sectors of the economy. Seasonal and other variations and changes over time in the size and characteristics of employment and unemployment could also be monitored using up-to-date information from labour force survey. The labour force data also serves as an input to assess the achievement of the Millennium Development Goals (MDGs) as well as to monitor and evaluate the five years Growth and transformation Plan/GTP/ of the country.

The Central Statistical Agency (CSA) has been providing labour force and related data at different levels for the last three decade. These include the 1976 Addis Ababa Manpower and Housing Sample Survey, the 1978 Survey on Population and Housing Characteristics of Seventeen Major Towns, the 1980/81 and 1987/88 Rural Labour Force Surveys (RLFS). The 1984, 1994 and 2007 Population and Housing Censuses, and the 1999 and 2005 National Labour Force Surveys provided a comprehensive national labour force data representing both urban and rural areas. The 1996 and 2002 surveys of the informal sector and other household and establishment surveys also provide information related to the work force.

Considering the development process of the country and dynamic nature of the sectors and fulfilling the demands of different data users, the CSA has been launched National Labour Force Survey program (NLFS) every five years, while Urban Employment Unemployment Survey /UEUS/ every year. The 2013 survey is the third series next to the 1999 and 2005 NLFS. The survey covers both urban and rural areas of all the regions in particular and the country in general.

This survey primarily provides data on the size, distribution and socio- economic and demographic characteristics of employed and unemployed population. In addition, data on economic activities of children were also collected to measure child labour in both urban and rural areas. For this purpose, the former minimum age limit 10 years was lower down to 5 years because children in rural and urban areas used to work at their early age such as collection of fire wood, looking after cattle, shoeshine, street vendor, petty trading...etc. However, for the purpose of reporting the economic activity status of the population according to the Ethiopian situation, the lower age limit was fixed in to ten years. Hence, this statistical report is, therefore, mainly aimed at providing information on the economic activities of the population aged ten years and above.

Like that of the previous surveys, the recent survey has collected data from selected major towns with population size 100,000 and above including region capital cities. Though data on economic activity status of the population was collected using the two approaches in the 2013 NLFS, the result presented in this report refers only the current activity status approaches. The detailed statistical tables with brief description for Addis Ababa City Administration and each sub city levels are presented in the subsequent chapters.

## **1.2 Objectives of the Survey**

The general objective of the 2013 National Labor Force Survey was designed to provide statistical data on the size, distribution and characteristics of the economically active and the distribution in the various sectors of the economy in both

urban and rural areas. The data will be useful for policy makers, planners, researchers, and other institutions and individuals engaged in the design, implementation and monitoring of human resource development plans, programs and projects. The specific objectives of this survey are: -

- Generate data on the size of the potential work force that is available to participate in production process;
- Determine the activity status and rate of economic participation of different sub-groups of the population;
- Identify those who are actually contributing to the economic development (i.e., employed) and those who are out of the sphere of productive activities;
- Identify the size, distribution and characteristics of employed population by occupation and Industry, status in employment, sector of employment and earnings from employment...etc.
- Provide data on the size, distribution and characteristics of unemployed population and rate of unemployment;
- Assess the situation of women's employment or the participation of women in the labour force;
- Provide time series data to trace changes over time.

### **1.3 Contents of the Survey Questionnaire**

The survey is mainly aimed at providing information on the economic characteristics of the population aged 10 years and above, i.e., their activity status, employment, and unemployment situation during the last seven days prior to the survey date. It has also covered detailed socio-demographic background variables such as age, sex, relationship to the head of household, migration, disability, literacy status, educational level, training and marital status. The survey has used a structured questionnaire to produce the required data. Before taking its final shape, the draft questionnaire was commented by CSA senior staff member from different directorate as well as top management. Based on the comment given by professionals, the content, layout and presentation of the questionnaire was amended.

The questionnaire was organized in to six sections;

- Section - 1:** Area identification of the selected household: this section dealt with area identification of the respondents such as region, zone, wereda, etc.
- Section - 2:** Socio- demographic characteristics of households: it consisted of the general socio-demographic characteristics of the population such as age, sex, education, status and type of migration, disability, literacy status, educational Attainment, types of training and marital status.
- Section – 3:** Economic activities during the last seven days: this section dealt with a range of questions which helps to see the status and characteristics of employed persons in a current status approach such as hours of work in productive activities, occupation, industry, status in employment, earnings from employment, job mobility, service year for paid employees employment in the formal and informal sector and time related under employment.
- Section – 4:** Unemployment and characteristics of unemployed persons: this section focused on the size,rate and characteristics of the unemployed population.
- Section – 5:** Economic activities during the last twelve months: this section consists of the usual economic activity status refereeing to the long reference period i.e. engaged in productive activities during most of the last twelve months, reason for not being active, status in employment, main occupation and industry with two digit codes.
- Section – 6:** Economic activities of children aged 5-17 years: this section comprises information on the participation of children aged 5-17 years in the economic activities, whether attending education, reason for not attending education, whether they were working during the last seven days, reason for working, for whom they are working, types of injury at work place, whether using

protective wear while working and frequency of working periods, and orphan hood status.

The questionnaire used in the field for data collection was prepared in Amharic language. Most questions have pre-coded answers. A copy of the questionnaire translated to English is attached as Annex II of this report.

## **1.4 Definitions of Key Concepts and Terms**

**Urban Center:** - is generally defined as a locality with 2000 or more inhabitants. In the 1994 Population and Housing Census Cartographic work, however, for practical purposes an urban center includes the following regardless of the number of inhabitants. All administrative capitals (Regional capitals, Zonal capitals and Wereda capitals), Localities with Urban Dweller's Association (UDAs) not included in (i), All localities which are not included either in (i) or (ii) above having a population of 1000 or more persons, and whose inhabitants are primarily engaged in non-agricultural activities.

**Enumeration Area (EA):** is a unit of land delineated for the purpose of enumerating population and housing units without omission and duplication. An EA in rural areas usually consists of 150-200 households, and on the other hand an EA in urban areas constitutes 150-200 housing units.

**Household:** Consists of a person or group of persons, irrespective of whether related or not, who normally live together in the same household and housing units and have common cooking and eating arrangements.

**Housing Unit :** is defined as a separate and independent place of abode either intended for habitation or not intended for habitation but was occupied as a living quarter by a household during the survey period. Although intended for habitation by one household, a housing unit may, at the survey be occupied by one or more households or may be used partly for living and partly for establishment.

**Head of Household:** is a person who provides economic supports or manages the households. The head of the household is selected by household members for some reasons of his age or respect regardless of their sex.

**Usual Member of a Household:** a person is considered as usual members of a household if he or she is:-

- a) a person who continuously live/reside at least for six months and have a common cooking and eating arrangements with the household; or
- b) a person who is temporarily absent from the household at the time of the survey but his absence has not violated the six months criterion.
- c) House maids, guards, baby sitters, etc...with no other dwelling and who were staying with the household at the time of the survey.
- d) Persons who plan to live more than six months due to searching for job and transfer from job ...etc.

## **1.5 Limitations of the Survey**

Lack of income data for self-employment is a limitation of this survey. It is difficult to collect data on income from self employment in a situation where most people do not want to give information about their actual income or earnings. Furthermore, specifically the currently available techniques developed for measuring income from self employment are not refined and yet ambiguous. However, income data that would supplement the available information could be obtained from other sources like the Household Income, Consumption and Expenditure Survey.

## **1.6. Training of Field Staff**

The training program of enumerators, supervisors, statistician and other field staffs were conducted in two stages. The first stage training was conducted from April 22/2013 - May 2/2013 at two training centers in Ambo and Adama towns for ten days. The first stage trainees were selected from CSA head and branch offices and Addis Ababa Bureau of Labour and Social Statistics /BoLSA/. The training was given by head office professionals and sub-professionals those with long time experiences. The training was guided by an enumerator and supervisor manuals, occupation and industry code book, which consist of detailed explanation of concepts and instructions on how to fill each entry in the questionnaire.

The second stage training was organized for all field staff and conducted at 25 branch statistical offices. Those who were trained at the head office in turn gave similar training for field enumerators and supervisors from May 9/2013 – May 21/2013 for about twelve days. The training consisted of classroom discussions on concepts and definitions, techniques of filing the questionnaire as well as mock-interview and one-day field practice followed by general discussion. The objectives of mock interview and field practice were twofold. First, it enabled to assess how well the theoretical class discussions were understood by all participants. The second objective was to examine the difficulty which would likely be encountered during actual fieldwork. The discussions were intended to exchange experiences among participants and pinpoint the areas of the survey questions that need more care and attention.

All the branch statistical offices of the CSA participated in the survey process undertaken, that is, in organizing the second stage of training, in deploying the field staff to their respective sites, and retrieving completed questionnaires and submitting them to the head office. They were also responsible in administering the financial and logistic aspect of the survey as well as field supervision within the areas of their assignment.

## **1.7 Organization of the Fieldwork**

In order to carry out this survey with the desired level of quality, there was a need to organize a large staff that performs the various survey activities. The 25 Branch Statistical Offices of the Agency carried out the data collection operation. These offices have permanent and contract enumerators stationed in the selected enumeration areas. The data collection operation of the survey involved a total of about 1,872 enumerators and about 634 field supervisors including coordinators involved with an average supervisor-enumerator ratio of 1: 3.

Data collection from the field took place from 24 May, 2013 - June 12, 2013. In some of the sample sites the data collection was carried out in two phases. That is, after completing the data collection in the selected enumeration area such as in Addis Ababa city Administration enumerators were shifted to another sample sites to carry out the same exercise.

The interviews were conducted by going from house-to-house using a structured questionnaire and relevant codebook. The data was collected from each sampled household and the respondent from whom the information collected was the head of the household or other responsible household members. Most of the enumerators were assigned to one sampled enumeration areas in which they could easily converse with the respondent's dialect. Interpreters were made available in cases where there is difficult to converse.

Field supervision was undertaken side by side with the data collection. During the survey data collection operation, close and regular supervision was undertaken at various levels. Immediately after the commencement of the data collection exercise the supervisors had made spot checking, re-interviewing and a thorough scrutiny of filled-in questionnaire applied to ensure that the data collection activities being carried out according to the given instruction. In addition to this, the statistician from branch statistical offices has made supervision. Moreover, the senior staff members from CSA head office has also made field supervision activities for ten days in different directions.

## **1.8 Organization of the Report**

This report contains six chapters. The first chapter covers background to the survey, where the objectives, the contents of the survey questionnaire, concepts and definitions of key variables, limitations of the survey and organization of the report were discussed. Chapter II deals with the survey methodology, where scope and coverage, sample size and response rate, training of field staff, organization of fieldwork and data processing were dealt. The results of the survey are presented in

the subsequent four chapters, that is, chapters III to VI. Chapter III deals with the size and socio-demographic characteristics of the population such as the distribution of population by age, sex, disability, migration, literacy status and educational levels. Chapter IV presents data on the economic participation of the population aged ten years and over. Chapter V explores the characteristics of the employed population; finally Chapter VI focuses on the detailed characteristics of the unemployed population. Statistical tables with brief description are also presented in each section and survey questionnaire is also attached in annex I.

## **1.9. Data Processing**

The filled-in questionnaires that were retrieved from the field were first subjected to manual editing and coding. During the fieldwork the field supervisors and the heads of branch statistical offices have checked the filled-in questionnaires and carried out some editing. However, the major editing and coding operation was carried out at the head office. All the edited questionnaires were again fully verified and checked for consistency before they were submitted to the data entry by the subject matter experts.

Using the computer edit specifications prepared earlier for this purpose, the entered data were checked for consistencies and then computer editing or data cleaning was made by referring back to the filled-in questionnaire. This is an important part of data processing operation in attaining the required level of data quality. Consistency checks and re-checks were also made based on frequency and tabulation results. This was done by senior programmers using CSPro software in collaboration with the senior subject experts from Labour Statistics Team of the CSA.

## CHAPTER II

### SURVEY METHODOLOGY AND DATA PROCESSING

#### 2.1. COVERAGE

The 2013 (2006E.C) National Labour Force Sample Survey covered all rural and urban parts of the country except the non-sedentary areas of six zones of Somali region. In the rural parts of the country it was planned to cover 842 enumeration areas and 25260 households while in urban part it was planned to cover 1113 enumeration areas and 33390 households. Totally both in urban and rural areas of the country it was initially planned to cover 1955 Enumeration Areas and 58,650 households.

Out of the initially planned households, in rural areas 99.6%, in urban part 99.5% , whereas, both in urban and rural areas 99.6% of households were successfully covered by the survey.

#### 2.2 SAMPLING FRAME

The list of Sampling Frame obtained from the 2007 Population and Housing Census is used to select EAs .A fresh list of households from each EA was prepared at the beginning of the survey period. The list was then used as a frame for selecting sample households of each EAs.

#### 2.3 SAMPLE DESIGN

For the purpose of the survey the country was divided into three broad categories. That is; rural, major urban center and other urban center categories.

**Category I: Rural:** - This category consists of the rural areas of nine regions and one city administrations found in the country. Regarding the survey domains, each region or city administration was considered to be a domain (Reporting Level) for which major findings of the survey are reported.

This category totally comprises 10 reporting levels. A stratified two-stage cluster sample design was used to select samples in which the primary sampling units (PSUs) were EAs. Households per sample EA were selected as a second Stage Sampling Unit (SSSU) and the survey questionnaire finally administered to all members of sample households.

**Category II:- Major urban centers:-** In this category all regional capitals and 15 other major urban centers that had a population size of 100,000 or more in 2007 were included. Each urban center in this category was considered as a reporting level.

This category has totally 26 reporting levels. In this category too, in order to select the samples, a stratified two-stage cluster sample design was implemented. The primary sampling units were EAs. Households from each sample EA were then selected as a Second Stage Unit.

**Category III: - Other urban centers:** Urban centers in the country other than those under category II were grouped into this category. Harari, Addis Ababa and Dire Dawa do not have urban centers other than that grouped in category II. Hence, no domain was formed for these regions under this category.

Unlike the above two categories a stratified three stage cluster sample design was adopted to select samples from this category. The primary sampling units were urban centers, the second stage sampling units were EAs and Households from each EA were finely selected at the third stage and the survey questionnaires administered for all of them.

## **2.4 SAMPLE SIZE AND SELECTION SCHEME**

**Category I: -** Totally 842 EAs and 25260 households were selected from this category. Sample EAs of each reporting level was selected using Probability Proportional to Size (PPS) systematic sampling technique; size being number of

household obtained from the 2007 Population and Housing Census. From the fresh list of households prepared at the beginning of the survey 30 households per EA were systematically selected and surveyed. For the distribution of planned and covered number of samples from each domain see Summary Table 2.1 below.

**Summary Table 2.1 Rural Domains**

Region	Reporting Domain	EAs		Households	
		Planned	Covered	Planned	Covered
Tigray	Tigray	73	73	2190	2190
Afar	Afar	36	36	1080	1080
Amhara	Amhara	178	177	5340	5310
Oromia	Oromia	206	205	6180	6150
Somali	Somali	45	45	1350	1340

Gambella	Gambella	35	34	1050	1019
Harari	Harari	24	24	720	720
Addis Ababa	Addis Ababa	0	0	0	0
Dire Dawa	Dire Dawa	24	24	720	720
<b>Total</b>		<b>842</b>	<b>839</b>	<b>25260</b>	<b>25159</b>

**Category II:-** In this category 817 EAs and 24510 households were selected. Sample EAs from each reporting level in this category were also selected using probability proportional to size (PPS) systematic sampling; size being number of households obtained from the 2007 Population and Housing Census is used to select EAs. From the fresh list of households prepared at the beginning of the survey 30 households per EA were systematically selected and covered by the study. The table below (Summary Table 2.2) shows planned and covered EAs and households in each domain.

**Summary Table 2.2 Major urban centers Domains**

Region	Reporting Domain	EAs		Households	
		Planned	Covered	Planned	Covered
Tigray	Mekele	23	23	690	672
	Adigrat	20	20	600	600
Afar	Asayita	20	20	600	600
Amhara	Gonder	23	23	690	690

Benishangul Gumuz	Asosa	20	20	600	600
SNNP	Awassa	23	23	690	689
	Hosaena	20	20	600	600
	Dila	20	20	600	600
	Sodo	20	20	600	600
	Arba Minch	20	20	600	600
Gambella	Gambela	20	20	600	600
Harari	Harar	40	40	1200	1196
Addis Ababa	Addis Ababa	250	249	7500	7437
Dire Dawa	Dire Dawa	40	40	1200	1170
<b>Total</b>		<b>817</b>	<b>816</b>	<b>24510</b>	<b>24391</b>

**Category III:-**127 urban centers, 296 EAs and 8,880 households were selected in this category. Urban centers from each domain and EAs from each urban center were selected using probability proportional to size systematic selection method; size being number of households obtained from the 2007 Population and Housing Census is used to select EAs. From the fresh listing of each EA 30 households were systematically selected and the study carried out on the 30 households ultimately selected. Summary Table 2.3 below shows the number of planned and sampled EAs

and households by domain.

**Summary Table 2.3 Other Urban Centers Domains**

Region	Reporting Domain	EAs		Households	
		Planned	Covered	Planned	Covered
Tigray	Tigray-Other Urban	33	33	990	990
Afar	Afar-Other Urban	20	20	600	600

Gambella	Gambella-Other Urban	21	20	630	600
Harari	Harari-Other Urban	-	-	-	-
Addis Ababa	Addis Ababa-Other Urban	-	-	-	-
Dire Dawa	Dire Dawa-Other Urban	-	-	-	-
Total		296	295	8880	8846

Including region urban and country domains, totally 67 reporting levels were formed.

Estimation procedures and standard errors & coefficients of variations for the estimates of selected variables are also presented in Annex II & Annex III, respectively.

## **CHAPTER III**

### **SIZE AND SOCIO -DEMOGRAPHIC CHARACTERISTICS OF THE POPULATION**

#### **3.1 Introduction**

The socio-demographic characteristics of the population presented in this chapter include age-sex distribution, migration, disability, marital status, educational attainment and training status. Data were collected from each member of the selected household member using survey questionnaire. A minimum age limit was set for data on marital status, educational attainment and training status of the population. Accordingly, marital and training status was asked for persons aged ten years and above while education was asked for persons aged five years and above.

#### **3.2 Population Size and Distribution**

Population size is one of the most important variables in human development planning. Besides, the age-sex structure of the population is another crucial that influences the labour force participation of the population. It is also vital for making component and sectoral projection. Age and sex are not only important by themselves but are also useful for an in-depth analysis of other socio - economic and demographic characteristics of the population.

Summary Table 3.1 presents the population size of the country and regions classified by age group, sex, urban and rural areas, while Summary Table 3.2 and 3.3 shows the distribution of the population by region, sex and sex ratio in urban, rural areas and major towns respectively. The survey result shows that the total population of the country residing in conventional households in June 2013 estimated to be 80,444,148 of which 40,335,493 (50.1 percent) were males and 40,108,655 (49.9 percent) were females excluding the non-sedentary areas of six zones of Somali region and visitors, persons residing in collective quarters (hotel/hostels, boarding

schools, prisons) as well as homeless persons. The distribution of population by place of residence indicates that urban population constitutes 14.7 percent of the total population.

### **3.3 Population Characteristics**

Duration of continuous residence is one of the questions incorporated in the questionnaire so as to identify migrants and non-migrants. It is also important to determine the timing of migration from a place to another place. The data on duration of continuous residence was collected in urban and rural areas from each member of the household in slightly different manner. The question was asked in urban areas in referring the number of years the person has been continuously residing in the town, while in the rural areas referring to the number of years the person has been continuously residing in the rural part of the Woreda.

A person who was born in a town and has been continuously residing there is considered as a non-migrant. However, a person who was born in another town or any rural part of the country is considered as a migrant. Also, a person who was born in the survey town but at one time or another resided in a different town or rural area and returned to the town is considered as a migrant (return migrant).

Similarly, a person who was born in a rural area of the Woreda of enumeration and has been continuously residing there is considered as a non-migrant. However, a person who was born in a rural part of another Woreda (other than the Woreda of enumeration) or any town is considered as a migrant. Also, a person who was born in the rural part of the Woreda but at one time or another resided in a rural part of a different Woreda or any town and returned to the rural part of the Woreda is considered as a migrant (return migrant).

For someone who keeps on coming to and going away from his / her area of enumeration, a six – months of time period was used to define his / her migration status. Thus, if an individual is absent from his / her usual place of residence for more than six

months and not expected to return to his/her place of residence then he / she is considered as not continuously residing in that particular area. In the survey, a person is said to be a usual resident of an area if he/she has been residing in the area continuously for at least six months before the survey date or intends to reside in the area for six months or longer.

Table 3.4 indicates the distribution of population of regions by migration status, duration of continuous residence, place of residence and sex. Matrix of migrant population of regions classified by current and previous place of residence and sex is presented in Table 3.5a - 3.5c at national and urban-rural. Table 3.6a - 6c and Table 3.7 shows migrants population classified by main reason for migration, age group, sex and place of residence. The distribution of population by disability status, types of disability, place of residence, broad age group and sex is presented in Table 3.8a - 3.8c.

Data on literacy status and educational attainment were collected from persons aged five year and above. During data collection period three questions were used to gather data on literacy status and educational attainment of individuals. A person is said to be literate if he/she is able to read and write fluently in at least one language. Those persons who can read and write were further asked to report the highest grade they have completed in the formal education system. For the purpose of the report, literacy status and educational attainment information is compiled for persons aged ten years and above so as to compare employment characteristics of the population. Table 3.9a-c and Table 3.10 presents status of school attendance and highest grade completed at national, regional and urban-rural level by age and sex. Literacy status of the population aged ten years and above is show in Tables 3.11 and Table 3.12.

Training is one of the social characteristics that data was collected in the 2013 National Labour Force Survey. A person is considered as trained if he/she has passed through any short or long term ability development training program given in or outside classroom in theory or in practice or both in comprehensive secondary schools,

university, colleges, private and government organization, and awarded a certificate in completion of the training. Hence, persons aged ten years and above were asked whether they have received vocational / technical training or not before the survey regardless of their status of education. Those persons who have been received a certificate from secondary schools in vocational / technical subjects, university, college, public or private organization / institution in a short or long term training program are considered as trained. In addition, those persons who have been trained two and above training; a training that took long training period was recorded. Persons who received an award of certificate of training were asked to state the type of training they have received. Thus, Table 3.13 presents training status and type of training received of persons aged ten years and above by sex and place of residence.

The 2013 NLFS is also collected data on marital status of the population aged ten years and above. The marital status of the population at national and regional level classified by sex, urban, and rural areas is presented in Tables 3.14.

Table 3.1: Total Estimated Population of Regions by Age Group and Sex and Place of Residence: 2013

Age Group	Total			Urban			Rural		
	Total	Male	Female	Total	Male	Female	Total	Male	Female
<b>COUNTRY TOTAL</b>

## **CHAPTER IV**

### **ECONOMIC ACTIVITY STATUS**

#### **4.1 Introduction**

Statistical data on the economic activity status of a population is essential for planning and formulating policies for better utilization of human resources of a country. The economic activity status indicates the size and distribution of the work force of economically active and not active population during a given reference period at a specified area.

In this regard, a wide range of information was collected on economic activity status of all persons aged five years and above in the 2013 NLFS. For the purpose of gathering information about the economic activities of children, the lower age limit was fixed at five years and hence data were collected from persons aged five years and above. However, for the purpose of measuring the economic activity status of adult population according to the Ethiopian situation, the lower age limit was fixed into ten years.

The 2013 National Labour Force Survey administered detailed labour related questions to measure the economic activity status of persons in urban and rural areas of the country. These includes:-

- whether persons were engaged in economic / productive activities in the last seven days prior to the survey date or reasons for not being engaged;
- whether persons were looking for work or will be available for work in the coming one month or reason for not being available during the reference period;
- whether persons were engaged in economic / productive activities during most of the last twelve months or reasons for not being engaged.

Every person aged five years and above in the sampled household was asked if he/she was engaged in any productive activities during the last seven days, and in the last twelve months prior to the survey date. Based on the response obtained from respondents, the economic activity status of the population was determined by using the standard definitions of economic and non-economic activities.

The 2013 NLFS followed the ILO international standard definitions of economic and non-economic activities. The concept of economic activity as adopted by the 13th International Conference on Labour Statistics (ICLS, 1982) is defined as the production of goods and/or services that falls within the United Nations System of National Accounts (SNA) production boundary (ILO, 1990). In this survey, economic/ productive activity is defined as work, which involves the production of goods and /or services for sale or exchange. In addition, production of goods and services for own consumption or own uses are also considered as economic activities. These include production of primary products (agriculture, hunting, fishing, forestry and logging, mining and quarrying), for own consumption; processing of primary products by the producers themselves; production of other commodities where part of it is sold on the market; and own account construction and fixed asset formation (expected life use of one year or more). Such economic activities could be performed for an individual, family or private enterprise, government establishment or social organization. The remuneration may be on daily, weekly, monthly, yearly or contract basis. The practical activities of apprentices are also considered as economic activities. On the other hand, unpaid household chores such as preparing food, cleaning the house, taking care of children are not considered as economic activities. Similarly, unpaid community and volunteer services are classified as non-economic activities.

Based on the above ILO definitions, data on economic activity status of persons aged ten years and above was presented in this report. Persons who were engaged in productive work /employed/ or available to be engaged /unemployed/ during the reference period are considered as economically active persons. While those persons who were neither engaged nor available to be engaged in the production of economic goods and services during the reference period are considered as economically not active population.

## **4.2 Data Collection Approaches**

The 2013 National Labour Force Survey used two approaches in the collection of data about the economic activity status of the population. These are current and usual activity status approaches. The main difference between these two approaches is the length of the reference period.

#### **4.2.1 Current Activity Status Approach**

The current activity status approach measures the economic activity status of a person based on a short reference period of seven days before the date of interview. In this approach, all persons aged ten years and above who were engaged in productive work or available to be engaged during the reference week were considered as currently active while those who were neither engaged nor available to be engaged in productive work were taken as not currently active.

#### **4.2.2 Usual Activity Status Approach**

The usual activity status approach measures the economic activity status of a person based on a long reference period of the twelve months prior to the date of interview. In the usual activity status approach, all persons aged ten years and above who were engaged in productive works or available to be engaged in the production of economic goods and/or services during most of the twelve months were classified as usually active. Persons who were neither employed nor unemployed during most of the twelve months categorized as not usually active.

The choice of appropriate measurement approach depends on the extent of variability of economic activities of the population during a specified period in a given the study area. In the rural areas where seasonal variation of activities is common, to collect the economic activity status of the rural population including the slack and peak periods of agricultural activities, a longer reference period (usual activity status approach) is found to be more appropriate. On the other hand, in urban areas, activities are relatively less affected by seasonal variations and hence shorter reference period or current activity status approach is found to be more convenient. But in this survey, both approaches were used to collect data on economic activity status of the population.

This chapter presents the economic activity status aged ten years and above, size and distribution of economically active and not economically active population, activity rate,

and reasons for not being active by using the current status approach at national, regional and major town levels. Besides, the chapter indicates the usual status approach of the economically active and not economically active population, and activity rate at the national and regional levels.

### **4.3 Current Activity Status**

As mentioned above, current activity status approach measures the economic activity status of a person in a short reference period, that is, the seven days prior to the date of the interview. In this approach a series of inquiries were administered to determine the economic activity status of the population during the reference week such as engagement in economic activity, attachment to the job, seeking and availability to work, reason for not seeking or available to work, etc. These questions were presented to those persons aged five years and above. For the purpose of reporting, persons aged ten years and above were used to classify the population into three mutually exclusive categories: employed, unemployed, and not in the labour force (Not Economically active). The employed and the unemployed population together constitute the labour force or the currently active population. The third category, those who were not in the labour force are called not currently active population.

As part of the economically active population, employed population consists of persons aged ten years and above who engaged in a productive activity or work at least for one hour during the seven days prior to the date of the interview. In addition, persons who had regular jobs, or business, or holdings to return to but who were temporarily absent from work (not at work or worked less than one hour) for various reasons such as illness or injury, holiday or vacation, strike or lockout, and seasonality of work, annual leave, temporary closure of establishment were also considered as employed. For a person to be considered as absent from work, he/she must have formal attachment to the job.

The currently unemployed population also comprises those persons without work but looking for work or available and ready to work if any job is found during the reference period of the coming one month. The reference period of the coming one month refers to

the survey week plus the next three weeks. If a person who is looking for work but engaged in productive activity during the reference week is recorded as employed but not as unemployed.

#### **4.4 Economically Active and Not Active Population and Activity Rate**

Based on the above definition of economic activity status, the number of economically active population including employed and unemployed persons, population not active and activity rates of the population aged ten years and above at national and regional level is presented by sex and age group in Table 4.1a- 4.1c, and Table 4.1.1a- 4.1.11c using the current status approach, respectively. Besides, the economic activity status and activity rate of selected major towns' population aged ten years and above is presented in Table 4.2.

The extent of the economic participation of the population is measured using economic activity rates. Economic activity rate or economic participation rate is computed as the percentage of the economically active population over the total of active plus not active population aged ten years and above. The national estimate shows that 79.8 percent of the population aged ten years and above were economically active (Table 4.1a). With respect to sex, the activity rate of male is 85.0 percent and the corresponding female activity rate is 74.6 percent. The age distributions of activity rate illustrate that it is low at younger and older age groups. The table also shows a relatively stable for middle ages between 25-49 years, and reaches its peak in age group 35-39 (Table 4.1a).

As far as the economic activity status of major towns' population is concerned, 63.0 percent of the populations were economically active while the remaining 37.0 percent were found to be the population not economically active. In terms of sex, the activity rate of male (70.7 per cent) was higher by 14.2 percent than female (56.5 per cent). Among the major towns, the highest activity rate was recorded in Bahir Dar town (75.4 percent) while the lowest was for Jijiga town (44.9 percent) (Table 4.2).

The size of economically active and not active population has its own implication on the development of the local as well as the national economy of a region. The high activity rate of a population implies the prevalence of huge potential of the human resource or human labour that foster sustainable economic development. On the other hand, the low economic activity rate also implies the lack of adequate and trained human labour or the existence of large number of economically non-productive population which has no contribution for development at the time. Hence, the economic activity rate of the population of the Ethiopia can be viewed from these perspectives.

Table 4.3 shows the number of economically active population, population not active and activity rates of the population, sex and place of residence aged ten years and above at national and regional level using the usual status approach. Thus, as Table 4.3 indicates, the usual economically active population aged ten years and above for the national was 77.5 per cent. With respect to sex, the usual activity rate of male was 82.9 percent while the corresponding figure for the females was 72.0 percent (Table 4.3).

The distribution of economically not active population at national and regional level by age group, sex and reason for not being economically active (for those who were neither engaged nor available and/ or seeking work) during the last seven days are presented in Table 4.4. The reasons for not looking for or available to work include; home maker, pregnancy, student, injury/ disability, illness, too young, old age, pensioned, remittance, and other persons. The result in Table 4.4 shows that the lion share of the population not active were students for the national as well as the regions. The remaining was the other groups of not active population.

## **CHAPTER V**

### **CHARACTERISTICS OF THE EMPLOYED POPULATION**

#### **5. 1. Introduction**

The previous chapter has defined the economically active population to be the sum of the employed and the unemployed population. This chapter presents statistical data on the size, distribution and characteristics of the employed population based on the definition given in chapter IV. The survey has collected the following information regarding the characteristics of the employed population:

- Main type of occupation;
- Main product or service of the establishment or industry;
- Employment status of the main activity and terms of employment;
- Reasons for absence from work for those employed persons who worked less than one hour or does not work at all but have formal job attachment during the reference period;
- Amount of earnings from paid employment;
- Hours actually worked per week;
- Change of occupation and reason for changing the job;
- Job satisfaction and reason for not being satisfied;
- Whether employed persons were available or seeking to work additional hours.
- Sector of the economy (Formal or informal employment sector);

#### **5.2. Employment to Population Ratio**

According to the 18 Key Indicators of Labour Market (KILM) used by the ILO, employment to population ratio is calculated as a percentage of total employed persons to that of the working age population (ILO, 1999). The distribution of employment to population ratio of urban and rural areas of each region by age group and sex is shown in Table 5.1. The data for employment to population ratio of each selected major towns by age group and sex is also presented in Table 5.2.

### 5.3. Occupation and Industry

In this survey, employed persons were asked about the type of main activity or occupation and major product or service of the establishment or industry in which they were engaged during the survey reference period (the last 7 days prior to the day of interview). The questions used to identify the type of occupation and industry, were left open ended so that they will be filled in with the fullest description and its code in the field. For those employed persons engaged in multiple activities, the activity that took the largest share of the respondents' time was taken as the main type of activity.

The responses of the descriptions and codes for the type of occupation and industry filled in by enumerators were further checked and edited at the head quarters using the National Occupational and Industrial Classifications (NOIC) code-book. The NOIC codes were adopted from the International Standard Classification of Occupation (ISCO-08) and International Standard Industrial Classification (ISIC, Revision 4) by taking into account the prevailing national socio-economic conditions.

The NOIC uses a 4-digit coding systems corresponding to 4 level classifications in successively finer detail. In the cases of occupation and industry, the levels are ordered as major divisions, sub major divisions, and minor divisions. The occupational classification was categorized into 9 major groups, 42 sub major groups, 132 minor groups and 467 unit groups. The industrial classification contains 21, 88, 238 and 425 major, sub major, minor and units divisions respectively. The distribution of employed population of country by major occupational groups, age group and sex for the country total, urban and rural of each regions are presented in Tables 5.3a-c and 5.4, respectively. Table 5.5 presents the distribution of employed population by major occupation, sex for each selected major towns. The distribution of employed population by minor occupational groups classified by Urban/rural setting and sex appears in Table 5.6. One should note that in Table 5.6 and 5.10 major occupation and industrial classification are written in capital letter, sub major occupation and industrial classification are written in bold small letter, while minor occupation and industrial classification are written in small letter, respectively. Analogous information, which deals with the industrial divisions are also shown in Table 5.7a-c to 5.10.

#### **5.4. Status in Employment**

Status in employment of a person indicates the level of involvement and degree of decision-making in his main activity. In this survey employed persons were asked about the employment status of their main activity which was classified into: employer, paid employees, self-employed, unpaid family worker, apprentice, and member's of producers, cooperative and others categories. Paid employees were further disaggregated into employees-government, employees government parastatal, employees NGO's, employees private organization, employees domestic and other paid employees.

Table 5.11 present the distribution of status in employment by age group and sex for urban and rural areas of the country and each region. The distribution of status in employment for major towns classified by sex is presented in Table 5.12. Table 5.13a-c contains data on major occupational groups cross classified by major industrial divisions and sex for urban and rural areas of the country total. The status in employment by major occupation and sex for country total, urban and rural are shown in Table 5.14a-c. Also, the figures for status in employment classified by major industrial divisions and sex for country total, urban and rural are presented in Table 5.15a-c.

#### **5.5. Number of Hours worked**

The absence of standard working hours and irregular nature of working days in the informal sectors or in the self employment, data collection as well as getting accurate data on hours of work were found to be difficult. In addition, the reliability of the data collection is likely to be affected due to memory lapse and lack of knowledge or information about the concepts of time on the part of the respondent. Thus, considering the inherent data collection problem on hours of work in developing countries, the figures presented in these tables should be regarded as indicative and not the true levels of intensity of work.

The 2013 National Labour Force Survey included questions on the number of hours worked for two purposes. First, the response on the number of hours worked during the seven days prior to the date of the interview is used to classify the respondents as employed or not on the basis of the given criteria of the minimum required hours of work. As described in Chapter IV, persons who worked at least one hour or more, and those who were not worked or worked less than 1 hour but had a job to return to were considered as employed. The rest of persons were then subjected to other filtering questions for unemployment and inactivity. The second objective of including questions on number of hours worked was to gather data on intensity of work among the employed population.

In this survey, all persons who were engaged in productive activities during the seven days prior to the date of interview were asked to provide the number of hours they worked in all of their productive activities. The response was recorded for each of the days in a separate notebook so as to get the total actual hours of work during the reference week. Then the hours so obtained were added together for the week and finally filled in the main questionnaire.

According to the resolution concerning statistics on hours actually worked that adopted by the 10<sup>th</sup> ICLS in 1962 (ILO, 1976), in this survey, the hours actually worked included:

- Hours actually worked during normal periods of work and time spent for waiting for the market;
- Time worked in addition to hours worked during normal periods of work, and generally paid at higher rates than normal rates (overtime);
- Time spent at place of work on activities such as the preparation of the work place; repairing maintenance, preparing and cleaning of tools and others;
- Time spent at the place of work waiting or standing by for such reasons as lack of supply of work, break down of machinery, or accidents, or time spent at the place of work during which no work is done but for which payment is made under a guaranteed employment contract and
- Time corresponding to short rest periods at the work place including tea and coffee breaks;

According to the resolution in recording the number of hours worked, care was taken to exclude hours paid for but not worked, such as paid annual leave, paid public holidays or paid sick leave. Also excluded are meal breaks, time spent on travel from home to work and vice versa /for those who have specified place of work/, and hours spent on household activities that were not considered as productive. For employed persons who were not at work during the seven days prior to the date of interview, the number of hours of work is recorded as zero. On the other hand, any time that employed persons have spent in productive activity in places other than work site is considered as working hour.

Table 5.16 presents the distribution of the number of hours worked during the last seven days by age group and sex at country total, urban and rural level. Similarly, the distribution for each region classified by country total, urban, rural and sex appears in Table 5.17. The distributions of number of hours worked for country total and each Region by major industrial divisions and status in employment disaggregated by place of residence and sex are shown in Table 5.18a-c.

## **5.6. Earning from Paid Employment**

Paid employment jobs are those jobs where the employees hold explicit (written or oral) or implicit employment contracts, which give them a basic remuneration. Some or all of the tools, capitals equipment, information systems and/or premises used by the employees may be owned by others, and the employees may work under direct supervision or according to the strict guidelines set by the owner(s) or persons in the owners' employment. Persons in "paid employment" jobs are typically remunerated by wages and salaries, but may be paid by commission from sales, by piece rates, bonuses or in kind payments such as food, housing or clothing. In this survey, earnings for paid employees refer to gross remuneration and include bonus, overtime, allowances and other benefits that are obtained only from the main job.

Table 5.19 shows the distribution of paid employees disaggregated by types of payment and sex for country total, urban and rural areas of each region. The distribution of paid employees in country total, urban and rural areas by sex and period

of payment at country level is presented in Table 5.20a-c. The distribution of paid employees of the country at national level classified by amount and period of payment and sex is presented in table 5.21a-c. Paid employees of the country by major industrial divisions, sex and amount of payment per month has also shown in Table 5.22a-c.

## **5.7. Absence from Work**

Employed persons that were considered to be absent from work were those who were not engaged in any productive activity or who work less than one hour during the seven days prior to the date of the interview but have formal job attachment. These persons were asked their main reason for being absent from work. Reasons for absence from work was classified as illness, holiday /vacation, Training/education, off-season, reduction in economic activity and “others” categories. The data presented in Table 5.23 indicates the distribution of employed population for their reasons for being absent from work by region and sex.

## **5.8 Labour Mobility and job satisfaction**

Labour/workers mobility defined as the geographical and occupational movement of workers. It consists change in the location of workers both across physical space (geographic mobility), and across a set of jobs (occupational mobility). On the other hand, Job satisfaction is how content an individual is with his or her job. In the 2013 NLFS, paid employees were asked whether they change their first job or not. The change of occupation as well as reason for changing the job of paid employees at national level and each region disaggregated by sex and place of residence is given in Table 5.24. Besides, Table 5.25 has shown the distribution of paid employee’s job satisfaction by reason for no satisfaction, sex and place of residence.

## **5.9 Availability to Work Additional Hours**

This survey collected data on time related under employment in an attempt to capture the insufficiency of the hours of work of employed persons in relation to an alternative employment situation in which persons are willing and available to be engaged in. The response of employed persons depending on their availability and readiness or not to work for additional hours was coded as “yes” or “no”. The response for additional hours available could be for another job (jobs) in addition to the current job; replacing any of current jobs by another job with increased hours of work or longer time on the current job. The distribution of employed population whether they were available or ready to work additional hours at country level and for each region by place of residence and sex is shown in Table 5.31. Table 5.32 presents the distribution of employed population of each region who were sought or available to work additional hours classified by type of work sought or available for place of residence and sex.

## **5.10 Formal and Informal Employment Sectors of the Economic Activity**

For statistical purposes, the informal sector is regarded as a group of production units, which according to the definitions and classification provided in the United Nation System of National Accounts (SNA Rev.4), form part of the household sector as household enterprises or, equivalently, unincorporated enterprises owned by households. The informal sector is defined irrespective of the kind of work place where the productive activities are carried out, the extent of fixed capital used, the duration of the enterprise and its operation as main or secondary activity of the owner.

The figures here were not referring to the whole employed population. In this survey, according to the 15<sup>th</sup> ICLS recommendations, those employed persons who were engaged in subsistence farming and work in private households were exempted from the analysis of the formal and informal sectors of the economic activity.

This survey includes questions to identify the employment sector of the economy and some of the characteristics in which the employed persons are engaged in their main activity. However, employed persons whose employment status were classified as employee-government, employee-government parasitatal, employee-non-governmental organization, or members of producers' cooperative were not

necessary to ask such questions related to the activities of their sectors because they were considered as formal and later classified as being working in the formal sector. On the other hand, other employed persons whose status in employment were employer, employee of private organization, self employed, and apprentice were asked the following questions whether the business /enterprise they were engaged in,

- a) Does the enterprise have book of account; or
- b) Does the enterprise have a license; or
- c) Does the product/Service of the organization you engaged in is mainly for market?

Based on the response to these three questions, classification on sector of economy was made as: formal, informal or “not identified”. Employed persons who satisfy at least one of the above conditions (‘a’ or ‘b’ answered ‘yes’) were considered as working in the formal sector. On the contrary, those who respond “no” for ‘a’ and ‘b’ and ‘yes’ for ‘c’, the activity was taken as informal. For those who don't know the situation about their main activity/business/ enterprise with respect to the above questions was labeled as “not identified”.

Table 5.26 presents the distribution of employed population of the country in relation to the sector of the economy classified by place of residence and sex. While, the distribution of employed population by selected Major towns, sector of economy and sex is presented in 5.27. Table 5.28 - 5.30 presents the cross classification of the informal sector by sex and region by some of the selected variables, such as major branches of economic sector, educational attainment, size of workers and type of working place.

## **CHAPTER VI**

### **CHARACTERISTICS OF UNEMPLOYED POPULATION**

#### **6.1 Introduction**

Unemployment is one of the indicators that have been used to measure the extent of unutilized human resource in the economy at a given area or region in a certain period of time. It indicates the quantity and quality of the human labour a nation or a region would have, and should be used to promote its economic development, but not actually used. The unutilized human resource as a result of unemployment has its own social and economic implication. Therefore, the availability of reliable and timely statistical data on unemployment is vital to formulate and design strategies as well as to monitor the existing employment policies.

A wide range of information regarding unemployment and the characteristics of unemployed population were collected in the 2013 National Labour Force Survey. This information is useful to estimate the number of unemployed population and rate of unemployment at various reporting levels.

This chapter presents the size of unemployed population and rate of unemployment at national, regional and urban rural levels. In addition, the characteristics of unemployed population such as age, sex, education, training status, marital status, disability, previous work experience, duration of unemployment, type of jobs looking for, problems in establishing own business or enterprise, actions taken to seek work ... etc., are presented in detail. These information were collected from persons aged ten years and above by using the two known measurement approaches, namely current and usual approaches. But, the result presented in this chapter refers to only the current activity status approach.

During the data collection period, respondents in the sampled household were asked detailed labour force questions using structured questionnaire. These includes:-

- whether they were seeking for employment, if not reason for not seeking.
- whether available for work during the coming one month, if not reason for not being available type of job looking for /i.e. self employment or paid employment or other/,
- type of problems faced to establish own business.
- previous work experience and duration of unemployment.

Based on the responses obtained from the respondents aged ten years and above, the unemployment was computed using the following methods of measurement.

## **6.2 Measurement of Unemployment**

The measurement of unemployment was done based on the following three criteria that must be satisfied simultaneously: “without work”, “currently available for work” ‘and “seeking work” (ILO, 1983). The standard definition of unemployment is related to the "seeking work" criterion can be interpreted as activities or efforts that non-working persons performed to look for jobs during a specified reference period (i.e., paid or self employment). The specific steps include registration at a public or private exchange; applying to employers; checking at worksites, farms, factory gates, market or other assembly places; placing or answering news paper advertisements; seeking assistance of friends or relatives; visit vacancy boards; looking for land, building, machinery or equipment to establish own enterprise, and arranging financial resources; applying for work permits and licenses...etc.

However, the standard definition of unemployment with its emphasis on seeking work criterion might be restrictive and might not fully capture the prevailing employment situations in many developing countries including Ethiopia, where the labour market is largely unorganized or of limited scope, where labour absorption is inadequate or where the labour force is largely self-employed.

Hence, the International standards introduced provisions, which allows for the relaxation of the seeking work criterion in certain situations. The provisions are two types, namely, partial relaxation and complete relaxation. Following the recommendations of the International standard and considering the prevailing national situations, the employment and unemployment and related labour force surveys used the above provisions to measure the different forms of unemployment. The definition of the two provisions is described as follows.

Under partial relaxation, the definition of unemployment includes discouraged job seekers, future start and layoffs in addition to persons satisfying the standard definition. Discouraged job seekers are persons who want a job but did not take any active step to search for work because they believe that they cannot find one. Future starts are those persons without work who have made arrangements to take up paid employment or to undertake self-employment activity at a date subsequent to the reference period. Layoffs are persons whose contract of employment or activity has been suspended by the employer for a specified or unspecified period at the end of which the person concerned has a recognized right or recognized expectation to cover employment with the employer (ILO, 1990).

The completely relaxed definition of unemployment refers to persons without work and those who are available for work, including those who were or were not seeking work. That is, the seeking work criterion is completely relaxed and unemployment is based on the “without work” and “availability” criterion only. The availability in this situation is tested by asking the willingness to take up work for wage or salary in locally prevailing terms, or readiness to undertake self-employment activity; given the necessary resources and facilities. It should be noted that fulltime students are considered as available if and only if they are ready to withdraw from their studies in order to accept a job.

The 2013 survey collected unemployment data in the standard, partially relaxed and completely relaxed measurements. After thorough evaluation and assessment of the results obtained using the three alternative and complementary measures; the rates obtained using the completely relaxed definition was found most plausible and hence selected for reporting.

Those persons aged ten years and above who had no work or did not work at least one hour or did not have job to return to, were asked to respond whether they were available or willing to work if job is found during the coming one month. Those who responded “Yes” to this question were further tested whether they were ready to take a job under prevailing conditions. By doing so, persons who had no job but available to work are considered as unemployed at the time of the survey.

### **6.3 Unemployment Rate**

Unemployment rate is used to describe the proportion of unemployed population from the total labour force. Unemployment rate is computed as percentage of the unemployed population over the total number of economically active population. The rate indicates the number of persons who are ready to participate or engaged in the production of goods and services.

The distribution of currently unemployed population aged ten years and above together with unemployment rate by region, age group and sex is presented in Table 6.1. The survey result reveals that in June 2013 there were 1,981,165 unemployed persons, out of whom males were 629,619 and females were 1,351,546. The rate of unemployment at national level in 2013 (4.5 percent) show a declining trend as compared to 1999 (8.06 Percent) and 2005 (5.06 percent). The corresponding rates of unemployment of males and females were 2.7 percent and 6.5 percent, respectively (Table 6.1). This indicates unemployment is more of a problem of females than males in the country. Besides, unemployment in urban areas was 16.5 percent while 2.0 Percent in rural areas in June 2013.

Unemployment rate by age group is relatively higher in the age group 15-44 years at national level as well as in most of the regions (Table 6.1). The young population aged 20-24 years recorded the highest unemployment rate (9.1 percent) in the reference period at national level. The rate of female unemployment was higher than their counter part in all age group.

Unemployment in the regions illustrates that the highest rate was recorded in Addis Ababa 24.2 percent, while the lowest rate as compared to the highest ones was found in Benishangul-Gumuz region (2.9 percent). But in the other regions of the country, the rate was found in the range 3.0 – 9.0 percent (Table 6.1).

Table 6.2 shows the distribution of unemployed population of twenty six selected major towns classified by age group and sex. Among the major towns, the highest unemployment rate above 20.0 percent was recorded in Kombolcha, Shashemene, Addis Ababa, Adama, Hosaena, Assela, Dire Dawa, Dessie, Bishoftu, Adama, and Adigrat towns. The lowest unemployment rate as compared to the highest ones was registered in Gambella town (8.7 percent).

#### **6.4 Characteristics of Unemployed Population**

Those persons aged ten years and above who were looking for work during the three months prior to date of interview were asked to report what steps they have taken to seek work and type of work they look for during this period. Accordingly, Table 6.3 and 6.4 present the distribution of unemployed persons who were looking for work during the three months prior to the survey date by place of residence, sex and step taken to seek work at national and major towns, respectively. Table 6.5 provides data on type of job unemployed persons were looking at national and regional level. On the other hand, Table 6.6 presents type of jobs unemployed persons looking for in major towns.

With regard to educational status of the unemployed population of the country at national, urban and rural level is shown in Table 6.7a-c, the regions in Table 6.8 and major towns in Table 6.9. The duration of unemployment is also presented in Table 6.10 and 6.11. While training status and types of training of the unemployed persons illustrated in Table 6.12, 6.13 and 6.14. Furthermore, the size of unemployed persons by marital status and previous work experience is shown in Table 6.15, 6.16 and 6.17.

Migration is one of the demographic characteristics used to portray the mobility of labour from one place to another due to various reasons. The distribution of unemployed population by status of migration, duration of residence, and reason for migration at national, regional and major town levels is presented in Table 6.18, 6.19, 6.20 and 6.21.

Among unemployed population those who attempt to establish their own business were asked to state what problems they have faced. The problem that unemployed persons faced in trying to set up their own business at national, regional and major town levels is presented in Table 6.22, and 6.23. Finally, Matrix of Migrant Unemployed population of regions by current place of residence and region of Previous Residence by urban rural area and sex is presented in Table 6.24a-c.
