

Federal Democratic Republic of Ethiopia
Central Statistical Agency

Population Projection of Ethiopia for All Regions
At Wereda Level from 2014 – 2017

August 2013

Addis Ababa

INTRODUCTION

The population projection figures in this report are based on the results of National population and Housing Census of Ethiopia conducted in May 2007. The base population for the projection was obtained from the 2007 Population and Housing Census for each of the regions and adjusted to the mid of the census year, 1 July 2007. Up to now population projection figures at wereda and Zonal levels are prepared and printed on yearly Statistical Abstract of the Agency. But these projections were done for each of the regions based on the mathematical method and then the figures for the wereda and zonal levels were prepared by the ratio method. The mathematical method considers the growth rate of the population to measure the change occurred between two points in time. That is to mean it does not take in to consideration the effect of mortality, fertility and migration. It is not recommended to use the results obtained from the mathematical method of projection beyond 5-6 years for after these years it gives a biased estimates of the population. That is why projection based on component method is required.

The component method of projection uses the fertility, mortality and migration as the main inputs of the projection. The fertility inputs that is, Total Fertility Rates, for each of the regions were derived from the three EDHS conducted in the years 2000, 2005 and 2011; 2007 PHC; and 2012 ICPS. The mortality input which is life expectancy at birth was estimated from the 2007 PHC mortality data while the migration inputs were derived from the 2012 ICPS data. All the inputs were adjusted to the base year of the projection. The SPECTRUM Computer software was adopted for the projection for 9 regions and 2 city administrations, the results of which was aggregated to obtain the national projected results corresponding to the three variants used.

Using the component method of projection the population projection values for each region was obtained. Then by using the ratio method of projection we produced the projection figures for the zones and weredas by urban and rural residence and by sex, too. Therefore, in this report the projected figures for the years 2014, 2015, 2016 and 2017 are prepared up to wereda levels for each region.

Four tables are available in this report:-

Table 1 Population projection values of 2014 at zonal and wereda levels by urban and rural residence and by sex.

Table 2 Population projection values of 2015 at zonal and wereda levels by urban and rural residence and by sex.

Table 3 Population projection values of 2016 at zonal and wereda levels by urban and rural residence and by sex.

Table 4 Population projection values of 2017 at zonal and wereda levels by urban and rural residence and by sex.
