TABLE OF CONTENT

LIST OF TABLES iii

LIST OF ANNEXES xx

CHAPTER I BACKGROUND TO THE SURVEY 1

1.1 Introduction 1

1.2 Objectives of the Survey 2

1.3 Content of the Survey 3

CHAPTER II SURVEY METHODOLOGY 5

2.1 Coverage and Sample Design 5

2.2 Selection Scheme and Sample Size 6

2.3 Training of Field Staff 10

2.4 Field Organization and Field Work 11

2.5 Data Processing 12

2.6 Limitation and Constraints 13

2.7 Organization of the Report 14

CHAPTER III SIZE AND CHARACTERISTICS THE POPULATION 15

3.1 Introduction 15

3.2 Population Distribution 15

3.3 Population Characteristics 16

CHAPTER IV ECONOMIC ACTIVITY STATUS 91

4.1 Introduction 91

4.2 Economic Activity Status Approach 92

4.3 Distribution of the Population by Economic Activity Status 93

CHAPTER V CHARACTERISTICS OF THE CURRENTLY EMPLOYED POPULATION 233

5.1 Introduction 233
5.2 Occupation and Industry 233
5.3 Employment Status 234
5.4 Hours Worked 235
5.5 Absence from Work 235
5.6 Terms of Employment 236
5.7 Availability to Work Additional Hours 236
5.8 Sector of Economy 236

CHAPTER VI SIZE AND RATE OF UNEMPLOYMENT 347

6.1 Introduction 347
6.2 Measurement of Unemployment 347
6.3 Distribution of the Unemployment 348

CHAPTER VII PARTICIPATION OF CHILDREN AGED 5 - 14 YEARS IN ECONOMIC ACTIVITY 409

7.1 Introduction 409
7.2 Participation of Children In Economic Activity 410

ANNEX I SURVEY QUESTIONNAIRE 495
ANNEX II ESTIMATION PROCEDURES OF TOTAL, RATIO AND SAMPLING ERRORS 501

REFERENCES 505

LIST OF TABLES

CHAPTER II - SURVEY METHODOLOGY

Table 2.1. Planned and Covered Sample Number of Enumeration Areas 6

Table 2.2. Planned and Covered Sample Number of Households 8

Table 2.3. Distribution of Field Staff by Branch Office 12

CHAPTER III - SIZE AND CHARACTERISTICS THE POPULATION

Table 3.1. Total Population of Regions by Age Group, Sex, Urban and Rural Areas: 1999 .19

Table 3.2. Total Population of Zones by Sex, Urban and Rural Areas for Tigray, Amhara, Oromiya, and SNNP Regions: 1999 22

Table 3.3a. Total Population by Age Group, Sex, Migration Status and Duration of Continuous Residence (Country-Total): 1999 23

Table 3.3b. Total Population by Age Group, Sex, Migration Status and Duration of Continuous Residence (Country-Urban): 1999 24

Table 3.3c. Total Population by Age Group, Sex, Migration Status and Duration of Continuous Residence (Country-Rural): 1999 25

Table 3.4. Total Population of Regions by Sex, Migration Status and Duration of Continuous Residence, Urban and Rural Areas: 1999 26

Table 3.5. Total Population of Zones by Sex, Migration Status and Duration of Continuous Residence, Urban and Rural Areas for Tigray, Amhara, Oromiya, and SNNP Regions: 1999 28

Table 3.6. Recent Migrant (lived less than 5 years) Population classified by Current and Previous Regions of Residence Urban and Rural area of Residence, and Sex: 1999 35

Table 3.7a. Recent Migrant (lived less than 5 years) Population by Age Group, Sex and Main Reason for Migration (Country-Total): 1999 43

Table 3.7b. Recent Migrant (lived less than 5 years) Population by Age Group, Sex and Main Reason for Migration (Country-Urban): 1999 44

Table 3.7c. Recent Migrant (lived less than 5 years) Population by Age Group, Sex and Main Reason for Migration (Country-Rural): 1999 45

Table 3.8. Recent Migrant (lived less than 5 years) Population of Regions by Sex, Main Reason for Migration, Urban and Rural Areas: 1999 46

Table 3.9. Recent Migrant (lived less than 5 years) Population of Zones by Sex, Main Reason for Migration, Urban and Rural Areas for Tigray, Amhara, Oromiya and SNNP Regions: 1999 49

Table 3.10a. Population Aged Ten Years and Over by Age Group, Sex, Literacy Status and Educational Attainment (Country-Total): 1999 59

Table 3.10b. Population Aged Ten Years and Over by Age Group, Sex, Literacy Status and Educational Attainment (Country-Urban): 1999 60

Table 3.10c. Population Aged Ten Years and Over by Age Group, Sex, Literacy Status and Educational Attainment (Country-Rural): 1999 61

Table 3.11. Population of Region Aged Ten Years and Over by Sex, Literacy Status, Educational Attainment, Urban and Rural Areas: 1999 62

Table 3.12. Population of Zones Aged Ten Years and Over by Sex, Literacy Status, Educational Attainment, Urban and Rural Areas for Tigray, Amhara, Oromiya, and SNNP Regions: 1999 65

Table 3.13a. Population Aged Ten Years and Over by Age Group, Sex and Marital Status (Country-Total): 1999 72

Table 3.13b. Population Aged Ten Years and Over by Age Group, Sex and Marital Status (Country-Urban): 1999 73

Table 3.13c. Population Aged Ten Years and Over by Age Group, Sex and Marital Status (Country-Rural): 1999 74

Table 3.14. Population of Regions Aged Ten Years and Over by Sex, Marital Status, Urban and Rural Areas: 1999 75

Table 3.15. Population of Zones Aged Ten Years and Over by Sex, Marital Status Urban and Rural Areas for Tigray, Amhara, Oromiya, and SNNP Regions: 1999 77

Table 3.16. Population of Regions Aged Ten Years and Over by Sex, Training Status and Type of Training, Urban and Rural Areas: 1999 84

CHAPTER IV - ECONOMIC ACTIVITY STATUS

Table 4.1a. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Country Total): 1999 95

Table 4.1b. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Country Urban): 1999 96

Table 4.1c. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Country Rural): 1999 97

Table 4.1.1a. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Tigray Region): 1999 98

Table 4.1.1b. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Tigray Region Urban): 1999 99

Table 4.1.1c. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Tigray Region Rural): 1999 100

Table 4.1.2a. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Affar Region): 1999 101

Table 4.1.2b. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Affar Region Urban): 1999 102

Table 4.1.2c. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Affar Region Rural): 1999 103

Table 4.1.3a. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Amhara Region): 1999 104

Table 4.1.3b. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Amhara Region Urban): 1999 105

Table 4.1.3c. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Amhara Region Rural): 1999 106

Table 4.1.4a Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Oromiya Region): 1999 107

Table 4.1.4b. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Oromiya Region Urban):1999 108

Table 4.1.4c. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Oromiya Region Rural): 1999 109

Table 4.1.5a. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Somalia Region): 1999 110

Table 4.1.5b. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Somalia Region Urban): 1999 111

Table 4.1.5c. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Somali Region Rural): 1999 112

Table 4.1.6a. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate, During the Last Twelve Months (Usual Status Approach-Benishangul-Gumuz Region): 1999 113

Table 4.1.6b. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Benishangul Gumuz Region Urban): 1999 114

Table 4.1.6c. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach -Benishangul-Gumuz Region Rural): 1999 115

Table 4.1.7a. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-SNNP Region): 1999 116

Table 4.1.7b. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-SNNP Region Urban): 1999 117

Table 4.1.7c. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-SNNP Region Rural): 1999 118

Table 4.1.8a. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Gambella Region): 1999 119

Table 4.1.8b. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Gambella Region Urban): 1999 120

Table 4.1.8c. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Gambella Region Rural): 1999 121

Table 4.1.9a. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Harari Region): 1999 122

Table 4.1.9b. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Harari Region Urban): 1999 123

Table 4.1.9c. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Harari Region Rural): 1999 124

Table 4.1.10a. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Addis Ababa): 1999 125

Table 4.1.10b. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Addis Ababa Urban): 1999 126

Table 4.1.11a. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Dire Dawa Administrative Council): 1999 127

Table 4.1.11b. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Dire Dawa Administrative Council Urban): 1999 128

Table 4.1.11c. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Twelve Months (Usual Status Approach-Dire Dawa Administrative Council Rural): 1999 129

Table 4.2. Population of Zones Aged Ten Years and Over by Sex, Activity Status and Rate During the Last Twelve Months, Urban and Rural Areas for Tigray, Amhara, Oromiya and SNNP Regions (Usual Status Approach): 1999 130

Table 4.3a. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach-Country Total): 1999 137

Table 4.3b. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach-Country Urban): 1999 138

Table 4.3c. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach-Country Rural): 1999 139

Table 4.3.1a. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach-Tigray Region): 1999 140

Table 4.3.1b. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach-Tigray Region Urban): 1999 141

Table 4.3.1c. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach-Tigray Region Rural): 1999 142

Table 4.3.2a. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach-Affar Region): 1999 143

Table 4.3.2b. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach-Affar Region Urban): 1999 144

Table 4.3.2c. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach-Affar Region Rural): 1999 145

Table 4.3.3a. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach-Amhara Region): 1999..... 146

Table 4.3.3b. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days Activity Status and Rate, During the Last Twelvemonths (Current Status Approach-Amhara Region Urban): 1999 147

Table 4.3.3c. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach-Amhara Region Rural): 1999 148

Table 4.3.4a. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach-Oromiya Region): 1999 149

Table 4.3.4b. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach-Oromiya Region Urban): 1999 150

Table 4.3.4c. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach-Oromiya Region Rural): 1999 151

Table 4.3.5a. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach-Somali Region): 1999..... 152

Table 4.3.5b. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach-Somali Region Urban): 1999 153

Table 4.3.5c. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach-Somali Region Rural): 1999 154

Table 4.3.6a. Population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach-Benishangul Gumuz Region): 1999..... 155

ANNEX II ESTIMATION PROCEDURES OF TOTAL, RATIO AND SAMPLING ERRORS

CHAPTER I

BACKGROUND TO THE SURVEY

1.1 Introduction

Statistical information on all aspects of the population is vital for the design, implementation and evaluation of economic and social development plan and policy issues. Labour force surveys are one of the important sources of data for assessing the role of the population of a country in the economic and social development process. These surveys provide data on the main characteristics of the work force engaged or available to be engaged in productive activities during a given period and also its distribution in the various sectors of the economy. It is also useful to indicate the extent of available and unutilized human resource that must be absorbed by the national economy to ensure full employment and economic well being of the population. Furthermore, the information obtained from such surveys is useful for the purpose of macro-economic monitoring and human resource development planning. The other broad objective of statistics on the labour force is for the measurement of the relationship between employment, income and other social and economic characteristics of the economically active population for the purpose of formulating and monitoring employment policies and programs, income-generating and maintenance schemes, vocational training and other similar programs. Seasonal and other variations in the size and characteristics of the labour force can also be monitored using up-to-date information from labour force surveys.

Labour force surveys can be organized at national, regional, local or sectoral levels depending on the type of information needed. The other sources of statistics on the labour force are censuses, establishment surveys and administrative records. Thus, in order to further fill the gap in data requirement for the socio-economic development planning, monitoring and evaluation, the Central Statistical Authority (CSA) has launched a survey program called the National Integrated Household Survey Program (NIHSP) at the end of 1980, which comprised Rural Labour Force Survey (RLFS) as a part of the program. To maintain the continuity and to update the Rural Labour Force Survey of 1981/82 results, another Rural Labour Force Survey was conducted in 1987/88. Also the CSA has conducted the 1976 Addis Ababa Manpower and Housing Sample Survey and the 1978 survey on Population and Housing Characteristics of

Seventeen Major Towns. Moreover, some date on the labour force were also collected as a part of other surveys such as the 1990 Family and Fertility Survey, 1996 Urban Informal Sector Sample Survey and in the country wide deccennial Population and Housing Censuses of Ethiopia conducted in 1984 and 1994.

The labour force surveys that were conducted earlier were limited in their coverage and information contained in the questionnaires. In this respect, both the 1981/82 and 1987/88 surveys covered only the rural part of the country. Till now there hasn't been a comprehensive national labour force survey representing both urban and rural areas. The information that should have been provided through labour force surveys could be said relatively out-dated as the sector is dynamic and sensitive to economic and social changes. To fill this data gap, a series of current and comprehensive labour force surveys need to be undertaken. Recognizing this fact, the CSA has undertaken a National Labour Force Survey in March 1999. It is clear that the month March is a slack period in most parts of rural Ethiopia and the indicators on the unemployment could be of slightly inflated. However, in addition to the current status approach, data on the economically active population was collected using the usual status approach that provide data on the total economically active population covering the whole survey year.

1.2 Objectives of the Survey

The 1999 National Labour Force survey was designed to provide statistical data on the size and characteristics of the employed, unemployed, underemployed and the non-active population of the country. In general, the data obtained from the survey is useful for policy makers, planners, researchers, and other institutions and individuals engaged in the design and implementation of human resource development projects and programs. The specific objectives of the 1999 National Labour Force Survey are to:

a. collect statistical data on the potential manpower who are available to take part in various socio-economic activities;

b. determine the size and distribution of the labour force; and the status and rates of economic activity and also to study the socio-economic and demographic characteristics of these groups;

c. identify those who contributed to economic development and those who are partially employed, without work and economically inactive;

d. to estimate and assess the levels and characteristics of the unemployed population;

e. generate data on the status and type of professional and vocational training;

f. assess the size and characteristics of children aged 5-14 years that were engaged in economic activities;

g. assess the situation of women's employment or the participation of women in the labour force;

1.3 Content of the Survey

The survey was mainly aimed at providing information on the economic characteristics of the population aged 10 years and over, that is, their activity status, employment, unemployment and underemployment situation. It has also covered detailed socio-demographic variables such as age, sex, literacy status, educational level, type and sources of training as well as internal migration. In addition, separate section that deals with the participation of children aged 5-14 years in economic activity was attached to the main questionnaire.

The survey has used a structured questionnaire to solicit the required data. Before taking its final shape, the draft questionnaire was tested by undertaking a Pilot Study. Based on the result of the pilot study the content, lay out and presentation was amended. The content of the survey has been further revised on the basis of the discussion made on the user - producer forum organized by the CSA.

The questionnaire is organized into six sections:

Section-1 Area identification of the selected household: this section has dealt with area identification of respondents such as Region, Zone, Wereda, etc.,

Section-2 Particulars of household members: it consisted of the general socio-demographic characteristics of the population such as age, sex, educational level, migration status, types and source of training and marital status.

Section-3 Economic activity during the last twelve months and last seven days: this section covered the usual and current economic activities, number of hours worked as well as reasons for not working during the last twelve months and last seven days.

Section-4 Characteristics of persons engaged in productive activities during the last seven days: this section dealt with the characteristics of employed persons such as occupation, industry, terms of employment, employment status, sector of economy engaged in, status of change of employment and underemployment condition.

Section-5 Unemployment and characteristics of unemployed persons: the section focused on the size and characteristics of the unemployed population.

Section-6 Economic activity of children aged 5-14 years: the section contained information on the participation of children aged 5-14 years in economic activities, such as, school enrollment status, whether worked in the last seven days, ...etc.

The questionnaire used in the field was prepared in Amharic language. Most questions have pre-coded answers and column numbers were assigned for each question. A copy of the questionnaire together with its English translation is attached as Annex I of this report.

The survey employed two approaches in the measurement of the economically active population, namely the usual and the current status approaches. In the usual status approach that refers to a longer time interval, data was collected about the main or usual economic activity of the population. On the other hand, the current status approach was based on a shorter reference period, and data was collected with reference to the current activity of the population. The usual approach refers to the last twelve months preceding the date of interview, while current approach using moving reference period, referred to the last seven days prior to the date of interview. In the survey, both approaches were employed in the urban and rural areas and consequently the content of the questionnaires that were administered in the two areas were similar.

CHAPTER II
SURVEY METHODOLOGY

2.1 Coverage and Sample Design

The 1999 National Labor Force Survey covered both urban and rural parts of the country, except six zones in Somali Region and two zones in Afar Region. In addition the residents of collective quarters, homeless persons and foreigners were not covered in the survey. For the purpose of the survey, the survey population in the country was divided into urban and rural categories (See Table 2.1).

Category I: **Urban** parts of 26 zones in Tigray, Amhara, and Oromiya Regions; and 9 zones and 5 special weredas in SNNP region; and urban parts of Affar, Somali, Benishangul-Gumuz, Gambela and Harari regions and Addis Ababa and Dire Dawa Administrative Council were grouped in this category. Each of the above, except the 5 special weredas in SNNP region were the survey domains (reporting levels). All in all 47 basic urban domains (Reporting levels) including total urban (regional and country level) were defined for the survey.

Category II: **Rural** parts of 26 Zones in Tigray, Amhara, Oromiya, and 9 zones and 5 special weredas in SNNP region; and rural parts of Affar, Somali, Benishangul-Gumuz, Gambela and Harari regions, Addis Ababa and Dire Dawa Administrative Council were grouped in this category. Each of the above, except Addis Ababa, were the survey domains (reporting levels). All in all 51 basic rural domains (reporting levels) including total rural (regional and country level) were defined for the survey.

In addition to the above urban and rural domains, survey results can be reported at regional and country levels by aggregating the survey results for corresponding urban and rural areas.

Definition of the survey domains was based on both technical and resource considerations. More specifically, sample sizes for the domains were determined to enable

provision of major indicators with reasonable precision subject to the resources that were available for the survey.

2.2 Selection Scheme and Sample Size

In both categories stratified two-stage sample design was used to select the sample in which the Primary Sampling Units (PSUs) were enumeration areas (EAs). Sample EAs from each domain were selected using systematic probability proportional to size; size being number of households obtained from the 1994 Population and Housing Census. From category I, a total of 913 EAs and from category II, a total of 1428 EAs were selected. Within each sample EA, fresh list of households was prepared at the beginning of the survey's fieldwork for urban sites and at the beginning of the 1991 E.C Agricultural Sample Survey's fieldwork for rural sites. The survey questionnaire was administered to 35 systematically selected households within each of the sampled EAs. Distribution of sample units by domain (reporting levels) and category is given in Table 2.1 and Table 2.2 below.

TABLE 2.1: PLANNED AND COVERED SAMPLE NUMBER OF ENUMERATION AREAS (EAs)

Note: In this and subsequent tables of the report SNNP refers to Southern Nations, Nationalities and Peoples' and K.A.T refers to Kembata Alabana Timbaro.

Coverage rate of sample EAs was 99.7 percent and response rate of sample households was 99.44 percent.

2.3 Training of Field Staff

All the Branch Statistical Offices of the CSA participated in the survey undertaking, that is, in organizing the second stage training, in deploying the field staff to their respective sites of assignment, and retrieving completed questionnaires and submitting them to the head office for data processing. They were also responsible in administering the financial and logistic aspect of the survey as well as field supervision within the areas of their assignment.

For the purpose of this survey, the training program of enumerators, supervisors and other field and office staff was conducted in two stages. The first stage training was conducted at the head quarters of the CSA, in Addis Ababa for seven days. The participants were selected from professionals and sub-professionals with long time experiences, branch office heads and their assistants who were to train enumerators and supervisors during the second stage of training conducted at the Branch Statistical Offices. The training was guided by an enumerator and supervisor manual, which consists of detailed explanation of concepts, ideas and instructions on how to fill each entry in the questionnaire.

The training at the head office, which lasted for seven days, consisted of theoretical discussions on concepts, definitions, and techniques of completing the questionnaire, as well as mock and practical field practice interview of households and/or household members. The objectives of mock and practical interviewing of households were twofold. First, it enabled to assess how well the theoretical class discussions were understood by all participants so that they could convey the same message to the enumerators and the supervisors. The second objective was to examine the difficulty, which would likely be encountered during actual fieldwork.

The second stage training was undertaken at the Branch Statistical Offices. The trainers were those who were trained at the head office and they gave similar training for enumerators and field supervisors for 10 days. The training consisted of classroom discussions, mock-interview and one day field practice. In addition, thorough discussions were made after field practice. The discussions were intended to exchange experiences among participants and pinpoint the areas of the survey questions which need more care and attention.

2.4 Field Organization and Field Work

In order to carry out this survey with the desired level of quality, there was a need to organize a large staff who performs the various survey activities. The 22 Branch Statistical Offices of the CSA carried out the data collection operation. These offices have permanent enumerators and supervisors stationed in the selected enumeration areas. In the data collection operation of the survey, a total of 1654 enumerators and 351 field supervisors were involved with an average supervisor-enumerator ratio of 1 to 5. The distribution of field staff by Branch Statistical Offices is given in Table 2.3 below.

The interviews were made through house to house calls using a structured questionnaire. The data was collected from each sampled household and the respondent from whom the information collected was the head of the household or other responsible household member. Most of the enumerators were assigned to an area in which they could easily converse with the respondent's dialect. In cases where the interview could be conducted only through the use of an interpreter, an interpreter was employed for the purpose.

In some of the sample sites the data collection was carried out in two phases. That is, after the data collection in urban sample sites was completed, the enumerators and supervisors were shifted to rural sample sites to carry out the same exercise. Field supervision was undertaken side by side with the data collection. During the survey data collection operation, close and regular supervision was undertaken at various levels. Immediately after the commencement of the data collection exercise the supervisors made spot checks, close supervision, re-interviewing and a thorough scrutiny of filled in questionnaires to ensure that the data collection activities are taking place according to the given instruction. In addition to this, the trainers and branch statistical office heads made supervision of the data collection operation.

Senior staff members from the CSA head quarters in Addis Ababa, apart from giving training to the enumerators and supervisors at Branch Statistical Office level, participated in the field supervision activities, which took about one week. Furthermore, during the training and at the beginning of fieldwork, the Management Staff from the CSA head quarters visited all Branch Statistical Offices and some urban and rural enumeration areas. In this instance they have discussed on the objectives and importance of the survey, the expected quality of the data and some other related issues with supervisors and enumerators.

2.5 Data Processing

The filled-in questionnaires that were retrieved from the field were first subjected to manual editing and coding. During the fieldwork the enumerators, the field supervisors and the

heads of branch statistical offices have done some editing. However, the major editing and coding operation was carried out at the head office. All the edited questionnaires were again fully verified and checked for consistency before they were submitted to the data entry. After the data was entered, it was again verified using the computer.

Using the computer edit specification prepared earlier for this purpose, the entered data were checked for consistencies and then computer editing or data cleaning was made by referring back to the filled-in questionnaire. This is an important part of data processing operation in attaining the required level of data quality. Consistency checks and rechecks were also made based on tabulation results. This was done by senior programmers using Integrated Microcomputer Processing System (IMPS) software in collaboration with the experts from Manpower, Wages and Salaries Statistics Study and Research Team of the CSA.

2.6 Limitation and Constraints

In the 1999 National labour force survey, migrants were identified by asking a question on the length of continuous residence in the survey area. A detailed question like region or zone of previous residence, area of previous residence and reasons for migration were asked only to those recent migrants who moved out from their original place during the five years prior to the date of the interview. It was decided not to ask long time (5 years or more) migrants further question about their region or zone of previous residence assuming that they may not be well aware of the current classification of regional administration.

Lack of income data from employment is another limitation of this survey. It is believed that it is difficult to collect income from employment data in a situation where most people do not want to give information about their actual income or earnings. Furthermore, currently the techniques developed for measuring income from self-employment is very ambiguous. Moreover, it is suspected that if such a sensitive question is presented to the respondent, it can affect the smooth running of the whole data collection exercise. To avoid such problems, income variables were left out from the questionnaire. However, income data that would supplement in hindsight of the available information could be obtained from other sources like the result of the Household Income, Consumption and Expenditure Survey.

2.7 Organization of the Report

This report is organized in seven chapters. The first chapter contains background of the survey, the objectives of the survey and content of the survey questionnaire. Chapter II deals with the survey methodology, training of field staff, field organization, data collection, data processing and limitation and constraints of the survey. The results of the survey are presented in chapters III - VII. Chapter III deals with the size and basic characteristics of the total population such as, the distribution of population by age, sex, education, training, migration, and marital status. Chapter IV presents data on the economic participation of population aged ten years and over. Chapter V explores the characteristics of employed population, while Chapter VI focuses on the detailed characteristics of unemployed population. Finally, Chapter VII shows the characteristics or economic participation of children aged 5- 14 years.

The questionnaire used in the survey is attached in Annex I. Finally, Annex II present estimation procedure of Totals, Ratios and Sampling errors. The tables presented in this report were selected from a long list of tables that have already been produced at Country, Regional and Zonal levels. Moreover, this statistical report will be followed by analytical report.

Since information presented in this report was collected from a sample of the population, statistical weight were applied to the information collected in order to let them represent the entire population. The application of statistical weight has resulted in some minor rounding errors. Because of this, slight discrepancies among the various tables may be observed.

As indicated on the titles of the tables, data presented in this report at zonal level refers to only Tigray, Amhara, Oromiya and SNNP Regions. Regarding zones of SNNP Region, separate report for the five special weredas could not be reported because of the small sample size allocated to them. For the same reason, estimates for rural part of Addis Ababa could not be reported.

CHAPTER III

SIZE AND CHARACTERISTICS OF THE POPULATION

3.1 Introduction

This chapter presents the demographic and social characteristics of the general population, that would help the user to interpret the results presented in the subsequent chapters in their proper context. The data presented include population size, migration status, literacy status, educational attainment, training status and type of training and martial status. The results are reported for the country and regions separately and zones of the four regions in the country disaggregated into urban and rural areas. It is worth mentioning that a lower limit for age has been set for some of the population characteristics during data collection and tabulation, like education, training and martial status. Accordingly, the educational status, training and martial status of a person has been reported for those aged ten years and above.

3.2 Population Distribution

Table 3.1 presents population size of the country and regions classified by age group, sex, urban and rural areas, while Table 3.2 presents population size of zones by sex, urban and rural residence. As mentioned above, the tabulations of data at zonal level in this and the subsequent chapters has been made only for the four regions, namely, Tigray, Amhara, Oromiya and SNNP. The population size presented in these tables refers to the dejure population residing in conventional households. Thus, excluded are visitors, person residing in collective quarters (hotel/hostels, boarding schools, prisons... etc.) as well as homeless persons.

The distribution of the total, urban and rural population of the country, according to migration status and duration of continuous residence classified by age group and sex are presented in Tables 3.3a - 3.3c, respectively. Tables 3.4 and 3.5 present similar data classified by sex for regions and zones of the four regions, respectively.

3.3 Population Characteristics

In this survey, duration of continuous residence was the question that was used to identify migrants from non-migrants. It also provides data on the timing of migration. The data on duration of continuous residence was collected in urban and rural areas in slightly different manner. The question asked in the urban areas referred to the number of years the person has been continuously residing in the town, while in the rural areas, it referred to the number of years the person has been continuously residing in the rural part of the wereda of enumeration.

Thus, in urban areas, a person who was born in a town and has been continuously residing there is considered as a non-migrant. However, a person who was born in another town or any rural part of the country is considered as a migrant. Also, a person who was born in the survey town but at one time or another resided in a different town or a rural area and has returned to the survey town is considered as a migrant (return migrant). Similarly, in rural areas a person who was born in a rural area of the wereda of enumeration and has been continuously residing there, is considered as a non-migrant. However, a person who was born in a rural part of another wereda (other than the wereda of enumeration) or any town is considered as a migrant. Also, a person who was born in the rural part of the survey wereda but at one time or another resided in a rural part of a different wereda or any town and has returned to the rural part of the survey wereda is considered as a migrant (return migrant).

For some one who keeps on coming to and going away from his area of enumeration, a 'six-months' limit period was used to define his/her migration status. Thus, if an individual is absent from his/ her usual place of residence for more than six months and not expected to return to his/her place of residence then he/she is considered as not continuously residing in that particular survey area. In the survey, a person is said to be a usual resident of an area if he/she has been residing in the area continuously for at least six months before the survey date or intends to reside in the area for six months or longer.

Migrants who resided continuously for less than five years in the survey area, were treated as recent migrants. For those recent migrants, further probing questions were asked

about their place of previous residence and reason for migration. Table 3.6 cross-classify recent migrant population by current and previous region of residence, sex and urban and rural area of previous residence. Tables 3.7a - 3.7c show the distribution of recent migrant population of the country by reason for migration, age group and sex. Tables 3.8 and 3.9 present similar information for regions and zones classified by sex and urban/rural residence.

The literacy status and educational attainment of the population aged ten years and above, is given in Tables 3.10a - 3.10c, and Tables 3.11 & 3.12. Two questions were used to solicit information on literacy status and educational attainment of individuals. A person is said to be literate if he/she is able to read and write fluently in at least one language. Persons who can read and write were further asked to report the highest grade they completed in the formal education system. Table 3.10a - 3.10c presents the distribution of population of the country aged ten years and over by literacy status and educational attainment classified by age group and sex. Similar information classified by sex, urban and rural areas is also depicted in Tables 3.11 and 3.12 for each region and the zones of the four regions, respectively.

The 1999 National Labour Force Survey has collected data on marital status of the population aged ten years and over. The marital status distribution of the population of the country, urban, and rural areas classified by age group and sex is presented in Tables 3.13a - 3.13c, respectively. Also the distribution of the population by regions and zones of the four regions disaggregated by sex, urban/rural residence are shown in Tables 3.14 and 3.15, respectively. Martial status is presented in five major groups, that is, single, married, divorced, widowed and separated. A person who had never been married is considered to be single; while married persons include couples who are living together bonded by any kind of marital engagement at the time of the survey (Traditional, Church, Sheria or Municipality). A person who had been married but whose marriage was dissolved before the date of the interview is categorized as divorced. A person who has not remarried after the death of a spouse is taken as widowed. Couples who have temporarily separated but did not dissolve their marriage agreement are considered as separated.

The last table of the chapter, that is, Table 3.16 deals with training status and type of training received classified by sex and urban and rural residence for each region. First, all

persons aged 10 years or more were asked if they have received vocational/technical training. In this survey a person is considered as trained if he/she has passed through any short or long-term ability development-training program given in or outside classroom in theory or in practice or both, and which has resulted in award of a certificate to the training. Note that the trainee can be either literate or illiterate. Examples, are persons have been trained and received certificate from secondary schools in vocational/technical subjects; University, College, public or private organization/institution...etc; that offer short or long term training program. Those who respond to have been taken vocational or technical training were further asked the type of training received. For those who have trained with more than one subject/profession, the one that took the highest training period was recorded.

* Estimates for AFFAR REGION refers to Zone 1, Zone 3 and Zone 5 out of the total 5 Zones.
** Estimates for SOMALI REGION refers to Shinele Zone, Jigjiga Zone and Liben Zone out of the total 9 zones.
*** Estimates for Rural part of ADDIS ABABA could not be reported because of small sample size allocated to it. However they are consolidated in the total estimates.

CHAPTER IV

ECONOMIC ACTIVITY STATUS

4.1 Introduction

One of the major objectives of labour force surveys is to provide information on the size and distribution of the population by economic activity status. In this survey, information was collected on economic participation of all persons aged ten years and over. The lower age limit was fixed at ten years because in the rural areas of the country children start taking part in many types of economic activities at young ages. In terms of activity status, the survey divided the population aged ten years and over into economically active and inactive broad categories.

Economic or productive activity in the survey was defined in terms of production of goods and services that fall within the United Nations System of National Accounts (SNA) production boundary (ILO, 1990). Hence, in the 1999 National Labour Force Survey, economic activity or production activity is defined as work which involves the production of goods and/or services for sale or exchange and production of certain products for own consumption. According to the above general definition, economic activity covers production of goods and services intended for sale on the market, production of other goods and services such as government activities; production and processing of primary products (agriculture, hunting, fishing, forestry and logging and mining and quarrying) for own consumption, processing of primary products by the producers themselves, production of other commodities where part of it is sold on the market; and own account construction and fixed asset formation (expected life use of one year or more). Such economic activities could be performed for an individual, family or private enterprise, government establishment or public organization. The remuneration may be on daily, weekly, monthly, yearly or contract basis. On the other hand, unpaid household chores such as preparing food, cleaning the house, taking care of children or collecting firewood for own consumption are not considered to be economic activity.

Similarly, unpaid community and volunteer services and prostitution are classified as non-economic activity.

In both urban and rural areas, all persons aged ten years and over who were productively engaged or available to be engaged during the reference period were included as economically active persons. In other words, the economically active population comprises all persons age ten years and over who were employed or unemployed in the reference period. The complement, i.e., those who were neither engaged nor furnish their labour constitute the economically inactive population.

4.2 Economic Activity Status Approach

The two approaches, that is, usual and current status approaches used for measuring the economically active population were employed in both urban and rural areas. In the usual status approach, all persons aged ten years and over were asked to report whether they were engaged in productive activities during most of the previous twelve months. Those who were engaged in productive activities during the reference period were considered to be the usually employed. In the case of persons engaged in agriculture, it was decided to classify them in the usually employed category if they have worked during most of the main agricultural season of the reference year. Persons who responded that they were not engaged in productive work were further asked the reasons why they were not so engaged during most of the year. Those who were not working during the reference period and were actively looking for work comprised the unemployed population. The employed and the unemployed together constitute the economically active population. On the other hand, persons who did not engage in productive activity during most of the year for other reasons were constituted as the economically inactive.

In the current status approach, a series of inquiry related to engagement in economic activity, seeking and availability to work, reason for not being available to work etc., were

administered to determine economic status of the population aged ten years and over. These questions in combination, are used to divide the population aged ten years and above into the three mutually exclusive categories: employed, unemployed, and not in the labour force. The employed and the unemployed population together make up the labour force or currently active population. The third category, that is, not in the labour force, represent the population not currently active.

The employed population in the current status approach consists of those who were engaged in productive activity for four hours or more during the seven days prior to the date of the interview. Persons who had regular jobs, or business, or holdings to return to but were absent from work (that is, not at work or worked less than four hours) for various reasons were also included as employed persons. For a person to be considered as absent from work, he/she must have formal attachment to the job. Employees who were fully/partly paid during their absence; or who will return to their work when relieved from the problem which is accounted as a reason for absence; or who were not absent for a total of two months are considered to have formal job attachment. Self-employed persons will be considered to have formal job attachment, if their place of work is not closed down during their absence, or they are sure it will be re-opened, if closed. Whereas, the unemployed population, which will be defined in detail in Chapter VI, consists of persons with out work, who are willing /available and ready to work during the coming one month prior to the date of the interview.

4.3 Distribution of the Population by Economic Activity Status

The number of the economically active and the non-active population during the twelve months prior to the date of the interview by age group and sex for the total country, urban and rural areas are presented in Tables 4.1a – 4.1c respectively. Similar data by regions are presented in Table 4.1.1 through Table 4.1.11, where separate tables for the total, urban and rural areas of each region were accompanied. These tables also present the activity/participation rates that are defined as the percentage of economically active population

over the total of the active plus the non-active population. Table 4.2 shows the usual economic activity status and activity rates by zones, sex and urban/rural residence for the four regions. The corresponding figures referring to the last seven days (the current status approach) for the country by urban and rural areas are presented in Tables 4.3a – 4.3c, respectively. Similar data by regions can be obtained from Table 4.3.1 through 4.3.11, where separate tables for the total, urban and rural areas of each region were accompanied. Like wise, Table 4.4 presents zonal distribution of the four regions.

Tables 4.5a – 4.5c show the distribution of the usually active population of the country according to whether they were employed or not during the last twelve months by age group, sex, urban and rural areas. Tables 4.6 and 4.7 exhibit the same information classified by sex and urban/ rural areas for the regions and zones of the four regions, respectively. Similarly, Tables 4.8a – 4.8c, 4.9 and 4.10 present analogous information for the last seven days.

The usually non-active population of the country according to reason for not being active (during the last twelve months) classified by age group and sex is presented in Tables 4.11a – 4.11c. The same information by regions and zones of the four regions by sex and urban/rural residence appears in Table 4.12 and 4.13, respectively. The corresponding figures referring to current status are presented in Tables 4.14a – 4.14c, and 4.15 & 4.16. The reasons for not being economically active are categorized as students, homemakers, disabled, illness, too young to work, prostitute, old age/pensioners and "others". In the current status approach these groups will be considered as economically active if they were productively engaged during the reference period. Thus, students who were partly engaged in productive activities during the reference period, such as helping family in farming etc., are considered as economically active.

CHAPTER V
CHARACTERSTICS OF THE CURRENTLY EMPLOYED POPULATION

5.1 Introduction

This chapter presents the characteristics of the currently employed population, which was defined in chapter V. The survey has collected the following information regarding the characteristics of the currently employed population: -

a) major type of occupation;
b) major product or service of the establishment or industry;
c) term of employment and employment status in the main activity;
d) reason for absence from work, for those employed persons who worked less than four hours or doesn't work at all but have formal job attachment during the reference period;
e) sector of economy /formal or informal sector/ ;
f) hours worked per week;
g) whether available or seeking to work additional hours;

Concepts, definition and short description of major variables used during the collection of these data is given below.

5.2 Occupation and Industry

Employed persons were asked about the type of main activity and major product or service of the establishment or industry in which they were engaged during the survey reference period. The questions used to identify the type of occupation and industry, were left open ended so that they can be filled-in with the fullest description in the field. For those employed persons engaged in multiple activities, the activity that took the largest share of time was taken as the main type of activity.

Responses of the type of occupation and industry of employed persons, were coded at the head office during data editing and coding using the National Occupation and Industry Classification (NOIC) code book, prepared for the 1994 Population and Housing Census of Ethiopia. The NOIC codes were adopted from the International Standard Classification of Occupation (ISCO-88) and International Standard Industrial classification (UN 1990) taking into account the prevailing national socio-economic conditions. The NOIC uses a 3-digit coding system corresponding to 3 level classification in successively finer detail. In the case of occupation, these levels referred as Major group, Sub-major group, and Minor group. In the case of industry, the levels are ordered as Major division, Sub-major division, and Minor division. In the NOIC, the occupational classification was categorized into 9 major groups, 28 sub-major groups and 113 minor groups. Whereas, the industrial classification contains 13, 60, and 159 major, sub-major and minor divisions, respectively. The distribution of employed population by major occupational groups, age group and sex for the total country, urban and rural areas is presented in Tables 5.1a - 5.1c, respectively. Tables 5.2 and 5.3 present the distribution of the employed population of regions and zones of the four regions according to major occupational groups classified by sex, urban and rural residence, respectively. The distribution by minor occupational groups for the country by sex and urban/rural residence appears in Table 5.4. Analogous information that deal with industrial division appear in Tables 5.5a to 5.8.

5.3 Employment Status

In the survey employed persons were asked about the employment status of their main activity. Employment status of a person was classified into: employer, paid employee, self-employed, unpaid family worker, apprentice, member of producers' cooperative, and "others" categories. Paid employees were further disaggregated into employee-government, employee-government parasitatal, employee private organization, and other paid employee.

Tables 5.9a - 5.9c present the distribution of the status of employment of the employed population of the total country by age group and sex, separately by urban and rural areas. The distribution of the employment status of the employed population of regions and zones classified by sex and urban/rural residence is presented in Tables 5.10 and 5.11. Table 5.12

indicates the distribution of employment status of employed population of the total country by sex and major occupational group separately for urban and rural areas. Tables 5.13a - 5.13c present employment status classified by major industrial divisions and sex for the total country, urban and rural areas, respectively.

5.4 Hours Worked

Employed persons were asked to provide the number of hours they worked in all of their productive activity in the reference period. The response was recorded for each day during the seven days prior to the survey interview date. The hours so obtained were added and recorded. In recording the number of hours worked, considerations were taken in that hours actually worked exclude hours paid for but not worked, such as paid annual leave, paid public holidays or paid sick leave. Also excluded are meal breaks, time spent on travel to and from work /for those who have specified place of work/, and hours spent on household activity that were not considered productive. For employed persons who were not at work during the seven days prior to the date of interview, the number of hours of work is recorded as zero. On the other hand, any time that employed persons have spent working in productive activity is considered as working hour. In line with this context, Table 5.14a - 5.14c present the distribution of the number of hours worked during the last seven days by age group and sex at country level. Similarly, the distribution for regions, classified by sex and urban/rural areas appears in Table 5.15.

Considering the inherent data collection problems of hours of work in developing countries, the results given regarding working hour's need not meant to be true levels of intensity of work. The reliability of the data collected may be affected due to memory lapse and ignorance about the concepts of time on the part of the respondents. Thus, the figures presented in these tables should be regarded as indicators and not the true levels of intensity of work. In countries like Ethiopia, where the majority of the population is engaged in informal self-employment activity, collection as well as getting accurate data on hours of work is difficult and hence the results in this survey should be used with caution.

5.5 Absence from Work

Tables 5.16a to 5.17 present information on reason for being absent from work of the employed population. Employed persons that were considered to be absent from work were those who were not engaged in any productive activity or who work less than four hours during the seven days prior to the date of the interview but have formal job attachment. These persons were asked their main reason for being absent from work. Reason for absence from work was classified as illness, holiday/vacation, training/education, off-season, reduction in economic activity and "others" categories. The data presented on Tables 5.16a – 5.16c indicate the distribution of reasons for being absent from work of the employed population who work less than four hour during the seven days prior to the date of interview by age group and sex for the total country, urban and rural areas, respectively. The distribution of the employed population according to reason for being absent by regions, sex and urban/rural residence is given in Table 5.17.

5.6 Terms of Employment

In the survey, information was collected from all paid employees about their term of employment. Terms of employment of the paid employees were classified into permanent employee, contract employee, and casual workers. Thus, Table 5.18 presents the distribution of the paid employed population of regions by terms of employment, sex and urban/rural residence.

5.7 Availability to Work Additional Hours

The response of employed persons on whether they are available and ready to work additional hours was coded as "yes" or " no". Tables 5.19a - 5.19c present the distribution of the employed population by whether they are available and ready to work additional hours, age group and sex for the total country, urban and rural areas, respectively. Table 5.20 present similar distribution classified by sex and urban/rural residence for the regions. Tables 5.21a - 5.21c present the distribution of the employed population that were available and ready to work

additional hours according to the number of hours worked classified by age group and sex for the total country, urban, and rural areas. The distribution of the number of hours worked of the employed population of regions, who were available and ready to work additional hour by sex and urban/rural residence is presented in Table 5.22.

5.8 Sector of Economy

In the survey employed persons whose employment status were classified as employee-government, employee-government parasitatal, employee-non-governmental organization, or members of producers' cooperative were treated as being working in the formal sector. Employed persons who are engaged in subsistence farming and those who work in private households, were not asked about sector of economy of their main activity. Other employed persons whose employment status were employer, employee of private organization, self employed, and apprentice were asked whether the business/enterprise they were engaged in, a) is keeping book of account that show the monthly income statement and balance sheet; or b) has ten or more workers; or c) has business/enterprise license. Based on the response to these three questions classification on sector of economy was made as: formal, informal or "not-identified". Employed persons who satisfy at least one of the above conditions were considered as employed in the formal sector. For those who respond "no" for all of the three questions, the activity was taken as informal. For those who doesn't know the situation about their main activity/business/ enterprise with respect to the above questions, was labeled as "not-identified". In line with the above classification, Tables 5.23 present the distribution of employed population of the country according to the sector of the economy classified by age group, sex and urban/rural residence. The distribution of the sector of the economy for employed population by regions, sex and urban/rural residence is presented in Table 5.24.

* Estimates for AFFAR REGION refers to Zone 1, Zone 3 and Zone 5 out of the total 5 Zones.
** Estimates for SOMALI REGION refers to Shinele Zone, Jigjiga Zone and Liben Zone out of the total 9 zones.
*** Estimates for Rural part of ADDIS ABABA could not be reported because of small sample size allocated to it. However they are consolidated in the total estimates.
Note: Those who were engaged in subsistence farming or working in private households are excluded from the above figures.

CHAPTER VI

SIZE AND RATE OF UNEMPLOYMENT

6.1 Introduction

This chapter presents the size and rates of unemployment categorized into urban and rural areas at national and regional level and zones of the four regions. In addition, the distribution of unemployment in relation to education, training status, type of training, work experience...etc., were shown in detail. Even though, information regarding unemployment was collected using the current and usual measurement approaches the results presented in this chapter refers only to the current activity status approach.

6.2 Measurement of Unemployment

In the measurement of unemployment the survey has followed the international standard definition of unemployment (ILO 1983) but took into account the prevailing national socio-economic condition. It is based on the following three criteria that must be satisfied simultaneously: "without work", "currently available for work" and "seeking work". The standard definition of unemployment with its emphasis on seeking work criterion might be restrictive and might not fully capture the prevailing employment situations in many developing countries including Ethiopia. Hence, the International Standards introduced provisions, which allows for the relaxation of the seeking work criterion in certain situations. According to the international standard definition, the relaxation of the seeking work criteria is employed in situations where "the conventional means of seeking work are of limited relevance, where the labour market is largely unorganized or of limited scope, where labor absorption is at the time inadequate or where the labour force is largely self employed".

The provisions are two types, namely, partial relaxation and complete relaxation. Following the recommendations of the International Standard and reviewing the prevailing national situation, the 1999 Labour Force Survey introduced a provision to capture the different forms of unemployment using the above alternative measurements. The treatment of the two options in the survey is described as follows. Under partial relaxation, the definition of

unemployment includes discouraged persons in addition to persons satisfying the standard definition. Discouraged job seekers are those who want a job but did not take any active step to search for work because they believe that they can not find one. Under the completely relaxed definition, unemployment includes persons without work and those who are available for work, including those who were or were not seeking work. That is, the seeking work criterion is completely relaxed and unemployment is based on the "without work" and "availability" criterion only. The availability in this situation is tested by asking the willingness to take up work for wage or salary in locally prevailing terms, or readiness to undertake self-employment activity, given the necessary resources and facilities.

The survey collected unemployment data in the standard, partially relaxed and completely relaxed options of measurements. After thorough evaluation and assessment of the results obtained using the three alternative and complementary measures; the rates obtained using the relaxed definition were found most plausible and hence selected for reporting. In this survey, those persons aged ten years and over who did not work at least four hours or did not have job to return to, were asked to report whether they were available or willing to work if job was found during the coming one month. Those who respond "Yes" answer to this question were further tested whether they were ready to take a job under prevailing conditions. Under the completely relaxed definition a person is considered as unemployed if he/she passes the availability test. In this definition, the person might or might not have looked for a job but was willing to work if job was available. This definition equally applied in both urban and rural areas.

6.3 Distribution of Unemployment

Table 6.1 and Tables 6.1.1 through 6.1.11 shows the current unemployment size and rates by age group, sex and urban/rural areas for the country and regions, while the same information for zones of the four regions by sex, and urban/rural areas can be obtained from Table 6.2.

As defined above, unemployed persons may or may not seek work. Unemployed persons who were looking for work during the three months prior to date of interview were asked to report what measures they have taken to seek work and type of work sought during

this period. Table 6.3a – 6.3c presents the distribution of unemployed persons who looked for work during the three months prior to the survey date by age group, sex and steps taken to seek work for the total country, urban and rural areas. Tables 6.4 and 6.5 provide similar data for the regions and zones of the four regions distributed by sex and urban/ rural areas, respectively.

The statistical tables for the unemployed persons according to the type of work sought or available for, classified by age group and sex are presented in Tables 6.6a - 6.6c for the total country, urban and rural areas. The data for each region and zones of the four regions by sex, urban and rural areas is shown in Tables 6.7 and 6.8, respectively.

The distribution of unemployed persons of the total country, urban and rural areas classified by educational level, age group and sex is presented in Tables 6.9a - 6.9c, respectively. Table 6.10 shows similar information for the regions classified by sex and urban /rural areas. On the other hand, Tables 6.11 and 6.11.1 through 6.11.11 deal with the distribution of unemployed persons by training status, type of training and sex categorized into urban and rural areas at country and regional levels.

The distribution of unemployed persons according to previous work experience categorized by age group, sex and urban/ rural areas is shown in Table 6.12. Similar information for the regions categorized by sex and urban/ rural areas is presented in Table 6.13. The classification of unemployed persons by duration of unemployment (in months), sex and urban/ rural areas is shown in Table 6.14 at country and regional levels.

* Estimates for AFFAR REGION refers to Zone 1, Zone 3 and Zone 5 out of the total 5 Zones.
** Estimates for SOMALI REGION refers to Shinele Zone, Jigjiga Zone and Liben Zone out of the total 9 zones.
*** Estimates for rural part of ADDIS ABABA could not be reported because of small sample size allocated to it. However they are consolidated in the total estimates.

CHAPTER VII

PARTICIPATION OF CHILDREN AGED 5 - 14 YEARS IN ECONOMIC ACTIVITY

7.1 Introduction

In most developing countries, children are engaged in activities, which are often exploitative or hazardous that affect their education, health, and mental and physical development (ILO, 1998). In order to design programs and strategies that would help to alleviate the problems associated with the activities of children, statistical data that reveal the type and magnitude of the activities of children, the character, distribution, causes and consequences are required. However, due to the shortcomings of the survey methodology in providing appropriate data collection methods, the child labour issue remained hidden statistically.

In Ethiopia, there is no complete statistical information on the socio-economic activities of children. As a result, it is difficult to show statistically the different categories of working children and those at the greatest risk at the national and regional levels. In order to fill this data gap, at least partially, the 1999 National Labour Force Survey has attached a section containing questions on the socio-demographic characteristics and economic participation and some other related information on children aged 5-14 years. This study was the first of its kind carried out by the Central Statistical Authority (CSA). The inclusion of these questions is aimed at obtaining some important variables on the socio-demographic and economic activities of children in the country. Particularly, information on economic participation was collected from children aged 5-14 years, however those aged 10-14 years were also asked detailed questions in the other sections of the survey.

In the survey, school attendance, reason for quitting school, economic activities of children, reason for working, age when started to work, extent of occupational injuries, living

arrangement, marital status of parents, parent survival status...etc., were asked for all children aged 5-14 years.

It should be noted that, surveys that are based on household units, excludes street children (i.e. homeless children who do not live in a household dwelling units, but live on the street) and others that have no permanent or fixed place of residence. Such information can be obtained through independent and specialized survey.

7.2 Participation of Children in Economic Activity

Tables 7.1a - 7.1c show the distribution of children aged 5-14 years by age, sex and status of school attendance for the total country, urban and rural areas. The same information classified by sex and urban/rural areas for the regions and zones of the four regions are shown in Tables 7.2 and 7.3, respectively. In addition, the statistical tables for children aged 5-14 years who have quitted school by reason for quitting school at country level classified by age, sex and urban/ rural areas is presented in Tables 7.4a – 7.4c. The data for each region and for zones of the four regions classified by sex and urban/rural areas are also shown in Tables 7.5 and 7.6, respectively.

The distribution children aged 5-14 years according to work status and type of productive activity classified by age and sex is presented in Tables 7.7a - 7.7c for the country and in Tables 7.7.1a through 7.7.11c for each region. Table 7.8 present similar information at zonal level for the four regions classified by sex and urban/rural areas. In the survey work status refers to the engagement of children in productive activity during the seven days prior to the date of the interview. In these tables, work status is presented as not working, working in domestic activity and working in productive activity. Children labeled as 'working in domestic activity' are those who work domestic chores for their families with out payment as opposed to those working in productive activity (for the definition of productive activity refer to chapter IV). Children engaged in productive activity were classified by type of activity. The type of activity is grouped into: household enterprise in agricultural sector, household enterprise in non

agricultural sector, paid employment in agricultural sector, paid employment in non-agricultural sector, paid domestic service and self employment in any sector.

The data on the distribution of children aged 5-14 years who were engaged in productive activity are presented by reason for working, sex and urban/rural areas for the country and region in Table 7.9. Table 7.10 shows working children aged 5-14 years by parental survival status, sex and urban/rural areas at country and regional levels, while Table 7.11 presents the distribution of those children whose parents are alive by parent's marital status, sex and urban/rural residence.

Finally, Table 7.12 shows the distribution of working children aged 5-14 years for the country and regions according to living arrangements classified by sex, urban and rural areas.

** Estimates for SOMALI REGION refers to Shinele Zone, Jigjiga Zone and Liben Zone out of the total 9 zones.
*** Estimates for rural part of ADDIS ABABA could not be reported because of small sample size allocated to it. However they are consolidated in the total estimates.

ANNEX I SURVEY QUESTIONNAIRE/English Translation/

THE CENTRAL STATISTICAL AUTHORITY

NATIONAL INTEGRATED HOUSEHOLD SURVEY PROGRAM- NATIONAL LABOUR FORCE SURVEY 1999

SECTION 1. AREA IDENTIFICATION OF THE SELECTED HOUSEHOLD

1 Killil	2 Zone	3 Wereda	4 Town	5 Keftegna/wereda	6 Kebele/ Farmer Association	7 Enumeration Area code	8 Household selection ser.no	9 Name of Head of household

Survey Round
1. Round One
2.Round Two

Section 2: PARTICULARS OF HOUSEHOLD MEMBERS

10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	
FOR ALL MEMBERS OF THE HOUSEHOLD												For members aged 5 years and above		For members aged 10 years and above				
Serial Number	Name of usual household members	Relationship to the head of the household	Sex	Age	Religion	Ethnic Group	Migration status					Educational Status		Type of Training			Marital Status	
Serial number of household member	List names of usual household members in the following Order: -Head -Spouse -Never married children According to Seniority in age -Married children and their household members who live in this housing unit -Other relatives - Non relatives	0- Head 1- Spouse 2- Son/daughter of head and spouse 3- Son/daughter of head 4- Son/daughter of spouse 5- Mother/father of head/spouse 6- Sister/brother of head/spouse 7- Other relatives 8- Non-relatives	1. Male 2. Female	What is your age? (enter age in completed year. If under one year enter '00' in the column)	What is your Religion? 1. Orthodox 2. Protestant 3. Catholic 4. Muslim 5. Traditional 6. Others	What is your Ethnic group? list of codes are provided in the manual	What is the number of years you have Continuously lived in this town (rural part of this wereda)? 0. Below 1 year 1. 1 year 2. 2 years 3. 3 years 4. 4 years 5. 5 - 6 years 6. 7 - 9 years 7. 10 years and above 8. Since birth → skip to Col. 22	who respond code 0-4 in col.17(Duration of migration less than 5 years) Before you came to this_ town (rural part of this wereda) In which Killil were you living (list of codes are provided in the manual)	In which Zone were you living (list of codes are provided in the manual)	Was your area of previous residence Urban/Rural? 1- Urban 2- Rural If rural write "Rural" if it is urban write the name of the town	For what reason did you leave your previous residence? 01. Education 02. Marriage arrangement 03. Marriage Dissolution 04. Search for work 05. Job transfer/ have got job/ 06. Displacement/war, draught.../ 07. Along with family 08. Return back to home 09. Shortage of land/ 10. Other/Specify	Can you read and write? 1. Yes 2. No → Skip to Col. 24	What was the highest grade you have completed? For grades 1-12 use the grades as code 20- Certificate 21- Diploma not completed 22- Degree not completed 23- Diploma 24- Degree 25- Above Degree 95. Literacy campaign 96. Non-formal	Have you received Certificate or above in any professional (Vocational/Technical education or training?) 1. Yes 2. No → Skip to Col. 27	In what type of profession (Vocational/ technical) are you trained? list of answers & codes are provided in the manual	Where did you get the training? 1. College/University/ Institute 2. Vocational/Technical school 3. Comprehensive high school 4. Employer Organization 5. NGO 6. Private training orgn. 7. Others/Specify	1. Never married 2. Married 3. Divorced 4. Widowed 5. Separated

END OF QUESTIONNAIRE

THANK YOU FOR YOUR COOPERATION

Column 60

01. Illness	07. To work
02. Lack of enough family income	08. Fail in school performance
03 Lack of peace in the family	09. Marriage engagement
04. Family disorganization (due to death, divorce, etc.)	10. Lack of family interest for education
	11. Displacement due to war, drought
05 Family transfer	12. Lack of personal interest for education
06. School was to far	13. Others/Specify/

Column 64

1. To help in family farming	5. To be self reliant(self help)
2. To help in family business	6. Others/ Specify
4. Augment household income	

column 68

1. Mother and Father	5. Employer (Non-relative)
2. Father only	6. Alone
3. Mother only	7. Others/Specify/
4. Other relatives	

ANNEX II:ESTIMATION PROCEDURE OF TOTAL, RATIO AND SAMPLING ERROR

I) Estimate of domain total, $\hat{Y}_h$, is given by:

$$\hat{Y}_h = \sum_{i=1}^{n_h} \frac{M_h H_{hi}}{n_h M_{hi} h_{hi}} \sum_{j=1}^{h_{hi}} Y_{hij} \qquad (1)$$

$$= \sum_{i=1}^{n_h} \sum_{j=1}^{h_{hi}} W_{hi} Y_{hij}$$

$W_{hi} = \frac{M_h H_{hi}}{n_h M_{hi} h_{hi}}$ Is the sampling weight?

Where:

M_h= Total number of households in stratum h obtained from the sampling frame

M_{hi}= Total number of households in EA/PSU i stratum h obtained from the sampling frame

n_h= Number of sample EAs successfully covered in stratum h

H_{hi} = Total number of households obtained from the survey listing in EA/PSU i stratum h

h_{hi}= Number of sample households successfully covered in EA/PSU i stratum h

Y_{hij} = The observed value of a characteristic y for household j in EA/PSU i stratum h.

Note: Estimate of total at country level, $\hat{Y}$, is obtained by summing up stratum/domain total estimates.

$$\hat{Y}=\sum_{h}\hat{Y}_{h} \qquad (2)$$

II) Sampling error of estimates:

The variance of domain total estimate is:

$$Var(\hat{Y}_{h})=\frac{n_{h}}{n_{h}-1}\left[\sum_{i=1}^{n_{h}}\hat{Y}_{hi}^{\,2}-\frac{\hat{Y}_{h}^{\,2}}{n_{h}}\right] \qquad (3)$$

In which $\hat{Y}_{hi}=W_{hi}\sum_{j=1}^{h_{hi}}Y_{hij}$

$$Var(\hat{Y})=\sum_{h}Var(\hat{Y}_{h}) \qquad (4)$$

Standard error of domain total estimate is:

$$SE(\hat{Y}_{h})=\sqrt{Var(\hat{Y}_{h})} \qquad (5)$$

Percentage Coefficient of variation (CV) of domain total:

$$CV(\hat{Y}_{h})=\frac{SE(\hat{Y}_{h})}{\hat{Y}_{h}}X100 \qquad (6)$$

Ninety five percent confidence interval (CI) of domain total:

$$\hat{Y}_{h}\pm 1.96XSE(\hat{Y}_{h}) \qquad (7)$$

III) Estimator of ratio:

$$\hat{R}_h = \frac{\hat{Y}_h}{\hat{X}_h} \qquad \text{And } \hat{R} = \frac{\hat{Y}}{\hat{X}} \tag{8}$$

Where the numerator and the denominator are estimates of domain totals of characteristic y and x, respectively.

$$Var(\hat{R}_h) = \frac{1}{\hat{X}_h^2}\left[Var(\hat{Y}_h) + \hat{R}_h^2 Var(\hat{X}_h) - 2\hat{R}_h Cov(\hat{Y}_h, \hat{X}_h)\right] \tag{9}$$

In which

$$Cov(\hat{Y}_h, \hat{X}_h) = \frac{n_h}{n_h - 1}\left[\sum_{i=1}^{n_h} \hat{Y}_{hi}\hat{X}_{hi} - \frac{\hat{Y}_h \hat{X}_h}{n_h}\right]$$

Estimates of standard error, coefficient of variation and confidence interval for the ratio estimate can be calculated by adopting formulas 5, 6 and 7.
