Distributive and Service Trade Survey 2008-2009 (2001 E.C) (Dts 2008-2009)

Overview

Type	Distributive and Service Trade Survey [en/dts]
Identification	DDI-ETH-CSA-Dts-2001-v1.0
Version	Production Date: 2011-04-12 Version 1.0 This version of the metadata contains final cleaned dataset that used to produce the 2008-2009 (2001 E.C) Distributive and Service Trade Survey

Abstract

Distributive and Service Trade Enterprise Survey is the second of its kind in the country which was carried out in regional capitals and other sample selected towns by the Central Statistical Authority. This economic sector accounts for a substantial proportion of the total economic activity in every country, whether in terms of the contribution of the sector to the gross domestic product or in terms of its share of total employment. These activities are widely scattered within a country, and the economic function they perform in channeling the flow of goods and services from the producer to the consumer is of great significance.

Data on Distributive and Service Trade is required for a variety of puroses. One of the most important is, to provide a basis for assessing trends in the economy, i.e. to examine changes in sectoral distribution and the growth of the sector itself. For this purpose, annual and more frequent survey estimates on the contribution of this sector to the national economy and the growth of the sector is crucial. More specifically, sales of goods and services within the sector, to producers/agriculture and industry and final consumers; changes in stocks, fixed capital formation /capital investment/ and wages and salaries earned in the sector would provide useful indicators on the activity, structural distribution and trends of the sector. Comprehensive data on Distributive and Service Trade broken down by activity is required in building up indexes of wholesale and retail trades, which are important indicators of business activity. For planning purposes, an accurate knowledge of the volume and the channels of flow of goods and services is essential. Distributive and Service Trade data help not only in presenting the current picture, but also in studing structural changes, and are the basis in formulating plans for bringing about the desired changes through production, price and distribution policies. Distributive and Service Trade data are of great use to the sector itself, industry and agriculture for market researches, market surveys and trends analysis. Statistics of trade over a period of time by kind of activity can indicate areas of expanding or contracting demands for different commodity groups and broad patterns of changing consumer tastes. A clearer picture of the margins between wholesale and producer's price, wholesale and retail prices et. could be obtained through the survey of Distributive and Service Trade. Hence in February 2003, Distributive and Service Trade Enterprise Survey was conducted as national level.

Kind of Data	Sample survey data [ssd]
Unit of Analysis	Enterprise (Distributive and Service Trade)

Scope & Coverage

Scope

The scope of distributive trade defined in this survey is wholesale and retail trade; repair of motor vehicles and motor cycles. The range of data items that the 2008/09 (2001 E.C) distributive trade sample survey comprises number of enterprises involved, employment, income obtained, volume of trade, distribution of enterprises in the regions and major towns of the country, the investment situation, and others within the distributive trade sector. Enterprises engaged in at least one or more of the activities of distributive trade were enumerated and data on the sector were acquired.

The 2010 distributive trade survey covered only urban parts of the country. Fifteen major urban centres (regional capitals and other major towns) and 106 other towns were covered in the survey. Totally 591 enumeration areas were planned to be covered in the survey and one EA was not covered for certain reasons. Thus, the survey

succeeded to cover 590 EAS. A fresh list of housing units was prepared to identify trade enterprises eligible for the survey. All wholesale trade enterprises found in the sampled EA were covered by the survey where as 10 retail trade enterprises and 10 Motor vehicle repair & maintenance enterprises were covered in each sampled EA.

Keywords	Household, Enumeration Area (EA), Distributive and Service Trade, Self employed worker, Employer, Employee, Unpaid family worker, Apprentices, Number of Employed, Wages and Salaries, Revenue from Sales, Gross value of income, Intermediate costs, Value Added in the National Account Concept (at market price), Operating Surplus, Fixed Capital Assets, Partnership, Share Company, Private Limited Company, Persons engaged, Co-operatives, Book of accounts, Minor permit (License), Permanent employee, Contract worker, Temporary worker, Enterprise/activity, Community and personal services, Wholesale trade, Service trade, Initial capital, Hand tools and equipment, Machinery, Urban centers

Geographic Coverage

The 2010 distributive trade survey covered only urban parts of the country. Fifteen major urban centres (regional capitals and other major towns) and 106 other towns were covered in the survey. Totally 591 enumeration areas were planned to be covered in the survey and one EA was not covered for certain reasons. Thus, the survey succeeded to cover 590 EAS. A fresh list of housing units was prepared to identify trade enterprises eligible for the survey. All wholesale trade enterprises found in the sampled EA were covered by the survey where as 10 retail trade enterprises and 10 Motor vehicle repair & maintenance enterprises were covered in each sampled EA.

Universe

The Distributive and Service Trade Survey is confined in selected urban parts of the country.

Sampling

Sampling Procedure

Sample design

The urban areas of the country were divided in to two broad categories. Regional capitals and big towns constitute one category where as other towns in the regions constitute the second category. The frame compiled from the 2009 small scale manufacturing survey and list of EAs from population census is used as a frame for this survey.

Category one (regional capitals and big towns)

This category consists of eleven regional capitals and four towns of the country. Each of them is considered to be the survey domain (reporting level) for which separate results are reported. Capitals and big towns included in this category are:-

1. Mekele
2. Asayita
3. Bahirdar
4. Nazreth

5. Jijiga
6. Asosa
7. Awasa
8. Gambela
9. Harar
10. Addis Ababa
11. Dire Dawa
12. Gonder
13. Dese
14. Jimma
15. Debre Zeit

For this category a three-stage stratified cluster sample design is used to select the samples in which the primary sampling units (PSUs) are the kebeles which are selected using systematic probability proportional to size sampling; size being number of trade enterprises obtained from the 2009 small scale industry survey. The secondary sampling units (SSUs) are the enumeration areas (EAs). EAs are selected by simple random sampling. Finally, at the third stage, establishments are selected systematically.

Category two (other towns)

This catagory consists of eight domains (reporting levels) of other towns that are not included in the first group, namely,

1. Tigray other towns
2. Afar other towns
3. Amhara other towns
4. Oromia other towns
5. Somali other towns
6. Benishangul-Gumuz other towns
7. SNNPR other towns
8. Gambella other towns

Three-stage stratified cluster sample design is adopted to select the sample from domains in category two. The PSUs are urban centers and they are selected using systematic probability proportional to size sampling; size being number of trade enterprises obtained from the 2009 small scale industry survey. The secondary sampling units are EAs that are selected using simple random sampling (SRS) method and the ultimate sampling units are the trade enterprises. In addition to the above categories survey results are produced for each regional capital, big towns, and other towns by combining the two categories in the region.

Planned and covered EAs in the survey

Categorey Domain (reporting level)	EA Planned	EA Covered
Category One- major urban		
Mekele	20	20
Asayita	16	16
Gonder	24	24
Dese	20	20
Bahirdar	20	20
Bishoftu	20	20
Adama	25	25
Jimma	20	20
Jijiga	16	16
Asosa	15	15
Hawasa	22	22
Gambela	15	15
Harar	24	24
Addis Ababa	100	100
Dire Dawa	24	24
Category Two- other urbans		
Tigray Others	20	20

Afar Others 20 20
Amhara Others 36 36
Oromia Others 50 49
Somali Others 20 20
Benishangul -Gumuz Others 16 16
SNNP Others 34 34
Gambela Others 14 14
Total 591 590

Data Collection

Data Collection Mode	Face-to-face [f2f]

Data Collection Notes
Method of Data Collection
 The distributive trade data for the year 2008/09(2001 E.C) was collected from enterprises in urban centres by
 interviewing the selected enterprises and recording the data to obtain the required information on activities of
 distributive trade. The data obtained were recorded in a set of forms designed for this purpose.
For this purpose an enumerator was assigned to a randomly selected enumeration area (EA) to list the entire
 housing units consisting of enterprises and households with the help of an EA map which was prepared for the
 2007 Population and Housing Census and later updated to include changes that occurred since the census.
In order to identify the enterprises engaged in distributive trade activity to be surveyed, the following tasks were
 performed in the order they appear.
i) All housing units (dwelling and non dwelling) were listed.
ii) Among the housing units listed only those conducting distributive trade activity (enterprises) were screened
 out.
iii) The screened enterprises were then categorized into three groups namely, wholesale trade, retail trade, and
 Motor vehicles and motorcycles sales and repair.
The reference year for the survey was 2008/09 (2001 E.C) despite the fact that the survey was conducted in April,
 2009/10 (2002 E.C).

Questionnaires
The Urban Distributive and Service Trade Establishments Survey questionnaire contains the following section
 (parts):
Section 1: Identification particulars of the distributive/service trade establishment : This section has variables that
 use to identify each questionnaire uniquely.
Section 2: Basic information of the establishment: This section contains variables that have basic information
 about the establishments like, type of sector, type of ownership, number of owners by sex, aabout the
 establishment's book of accounts, etc...
Section 3.1: Employment in the Enterprise
Section 4.1: Salaries, wages, and other benefits paid to the enterprise's employees
Section 4.2: Expenditure on Commodities Purchased for Sale
Section 4.3: - Miscellaneous Expenses
section 4.4: - Investment by Source of Fund
section 4.5:- Payable and Receivable Money
Section 5: Fixed Assets of the Enterprise .
Section 6.- Value of Stock
Section 7.1. Sales Revenue
Section 7.2. - Miscellaneous Revenue
Section 8: Supplementary Information

Supervision
Field Organization

All CSA Branch Statistical Office were involved in this survey. Accordingly, 25 statisticians from branch offices,
 272 field supervising on the average 5 enumerators depending on the extent of the area to be covered and 1007

enumerators (including reserve enumerators) were participated in the survey. Supervisors did the listing and data collection activity in the rural areas.

Data Processing & Appraisal

Data Editing
DATA PROCESSING
a) Editing, Coding and Verification
Statistical data editing plays an important role in ensuring the quality of the collected survey data. It minimizes the effects of errors introduced while collecting data in the field, hence the need for data editing, coding and verification. Although coding and editing are done by the enumerators and supervisors in the field, respectively, verification of this task is also done at the Head Office comprehensively.
An editing, coding and verification instruction manual was prepared and reproduced for this purpose. Then 30 editors-coders and verifiers were trained for one day in editing, coding and verification using the aforementioned manual as a reference and teaching aid. The completed questionnaires were edited, coded and later verified on a 100 % basis before the questionnaires were passed over to the data entry unit. The editing, coding and verification exercise of all questionnaires took 20 days.

b) Data Entry, Cleaning and Tabulation
Before data entry, the Business Statistics Directorate of the CSA prepared edit specification for the survey for use on personal computers for data consistency checking purposes. The data on the edited and coded questionnaires were then entered into personal computers. The data were then checked and cleaned using the edit specifications prepared earlier for this purpose. The data entry operation involved about 20 data encoders and it took 15 days to finish the job. Finally, summarization of the data was done on personal computers to produce statistical tables as per the tabulation plan.

Accessibility

Access Authority	Central Statistical Agency of Ethiopia (CSA) , http://www.csa.gov.et , csa@csa.gov.et
Contact(s)	Data Administrator (Central Statistical Agency) , http://www.csa.gov.et , data@csa.gov.et

Access Conditions
The Central Statistical Agency (CSA) is committed to achieving excellence in the provision of timely, reliable and affordable official statistics for informed decision making in order to maximize the welfare of all Ethiopians. This is achieved through the collection and analysis of censuses, surveys and the use of administrative data as well as the dissemination a range of statistical products and providing assistance and services to users.

A microdata dissemination policy is established by CSA to address the conditions and the manner in which anonymized microdata files may be released to users for research purposes. It also strives to identify the different levels of anonymization for different categories of data use. This policy is available at CSA website (www.csa.gov.et <http://www.csa.gov.et>).

CSA will release microdata files for use by researchers for scientific research purposes when:
The Director General is satisfied that all reasonable steps have been taken to prevent the identification of individual respondents
The release of the data will substantially enhance the analytic value of the data that have been collected
For all but purely public files, researchers disclose the nature and objectives of their intended research,
It can be demonstrated that there are no credible alternative sources for these data, and
The researchers have signed an appropriate undertaking.

Terms and conditions of use of public data files are the following:
The data and other materials provided by CSA will not be redistributed or sold to other individuals, institutions, or organizations without the written agreement of CSA.

The data will be used for statistical and scientific research purposes only. They will be used solely for reporting of aggregated information, and not for investigation of specific individuals or organizations.

No attempt will be made to re-identify respondents, and no use will be made of the identity of any person or establishment discovered inadvertently. Any such discovery would immediately be reported to the CSA. No attempt will be made to produce links among datasets provided by CSA, or among data from the CSA and other datasets that could identify individuals or organizations.

Any books, articles, conference papers, theses, dissertations, reports, or other publications that employ data obtained from CSA will cite the source of data in accordance with the Citation Requirement provided with each dataset.

An electronic copy of all reports and publications based on the requested data will be sent to CSA. The original collector of the data, CSA, and the relevant funding agencies bear no responsibility for use of the data or for interpretations or inferences based upon such uses.

Cost Recovery Policy:

It is the policy of CSA to encourage broad use of its products by making them affordable for users. Accordingly, CSA attempts to ensure that the costs of creating anonymized microdata files are built-in to the survey budget. At the same time, CSA attempts to recover costs associated with the provisions of special services that benefit only a specific group. Information on the price of each dataset is available at CSA website (www.csa.gov.et <http://www.csa.gov.et>).

Citation Requirements

The following statement must be used as citation:

" Central Statistical Authority of Ethiopia (CSA) Distributive and service trade survey, February 2003.
