Introduction

The Consumer Price Index (CPI) measures the average change in the price paid by consumers for a fixed market basket of goods and services. It is usually based on household expenditure weights of the goods and services in the basket and their current market prices. The twelve CPI's (i.e., the CPI's of the 11 Regions and the CPI at Country Level) presented in this report are based on the results of the Household Income, Consumption and Expenditure Survey (HICES) conducted by the Central Statistical Agency in 2004/2005 from which expenditure weights are derived for major household goods and services of that period and adjusted using the December 2006 retail prices of the goods and services as a base period.

The December 2006 based CPI updates the previous CPI series (i.e. December 2000 based) and the newly selected baskets are more diversified and the weights are more accurate. It also showed various improvements and incorporates non-food index as an independent group. The new series is constructed for country as a whole and Regional States including Dire Dawa and the Addis Ababa City Administration. However, similar indices had been utilized at Addis Ababa Level since 1963 and at Country, Urban and Rural Levels since 1995/96 and in Country and Regional level since 2000.

All the twelve general indices are divided into two major groups that is food and non-food index. The non-food index has ten major groups each, namely: Beverages; Cigarettes and Tobacco; Clothing and Footwear; House Rent, Construction Materials, Water, and Fuel and Power; Furniture, Furnishing, Household Equipment and Operation; Medical Care and Health; Transport and Communication; Recreation, Entertainment and Education; Personal Care and Effects; and Miscellaneous Goods and Services. On the other hand, the Food Index has 13 sub-groups. These are: Cereals; Pulses; Bread and Other Prepared Food; Meat; Milk, Cheese and Eggs; Vegetables and

Fruits; Oil and Fats Spices; Potatoes, Other Tubers and Stems; Coffee Beans (whole) and Tea Leaves; Other Food Items; Milling Charges; and Food taken Away from Home. Furthermore, the new CPI based on December 2006 includes more detailed #Housing, Construction materials, Water and Fuel and Power; components.

For the construction of the current consumer price indices, up to date data on retail prices are collected in the purposely selected sample market places located in representative urban centers in each zone/special weredas of the country. Hence, a total of 119 market places were selected for the retail price survey. In each market place an enumerator is assigned to undertaking the data collection activities. The price data is collected from the 1st day through 15th days of European Calendar month under consideration. To calculate the monthly regional consumer price indices, geometric means of prices of the specific regions are used. The distribution of the market place of each region and items included in the basket of commodities are given on Table A on page 2.

An important factor in constructing a Consumer Price Index is to select the representative basket of goods and services. Including all consumption items into the market basket of goods and services is both cumbersome and unnecessarily costly in term of data collection and processing. Furthermore, it doesn't make sense to include an insignificant weight into an index basket which could not move the price relative up or downwards compared to the general market trend. As a result, basket of goods and services included in the regional baskets are determined by expenditure cut-off point. The total numbers of items included in the regional basket in the December 2006 based indices are given in Table A on page 2.

Country level CPI aggregates the regional group indices and the contributions of the five relatively big regions in terms of the magnitude of the expenditure account for more than 95 percent. These regions are Oromiya, Amhara, SNNP, Addis Ababa and Tigray. On the other hand, the contributions of the remaining regions to the

Country Level Consumer Price Index is about five percent.

According to the weights for food and non-food groups in Table B below, the December 2006 based CPI is about 57 percent of household expenditure spent on the food component, which declined by 3 percentage points as compared to the December 2000 based CPI. On the other hand, the expenditure on non-food components increased from 40 percent to 43 percent. This indicates that the economic situation in the country is going in the right direction as postulated by economic theory. Similarly, in this period larger regions resulted in a substantial decrease in the average weights for food. despite the increased food taken out of home. It was offset mainly by an increase in housing, construction materials, water and fuel and power, furnishing and transport and communication.

Table B: Major groups in the 2000 and 2006 based CPI and their weights at Country Level

No.	Major Group	Weights

October 2012 Country Level Inflation Rate

a) 12 months Moving Average Inflation at Country Level

As it is indicated in Table 'C' below the country level overall inflation rate (annual change based on 12 months Moving Average) rose by 26.4 percent in October 2012 as compared to the one observed in a similar period a year ago. The country level food inflation increased by 30.4 percent as compared to the one observed a year ago. The country level Non-food inflation rate increased by 20.4 percent in October 2012 as compared to the one observed in October 2011. The 12 months moving average inflation rate shows the longer term inflationary situation.

b) Inflation based on comparison of Current vs. Last year's similar month at Country Level

Inflation based on comparison of Current vs. Last year's similar month shows the current inflation situation. Table (D) shows Inflation rate based on last year's similar month comparison. As can be seen from the table the October 2012 General year-on-year inflation has increased by 15.8 percent as compared to the one observed in October 2011. The 15.8 percent rise in General inflation rate is due to the fact that the General Consumer Price Index (CPI) of 314.0 percent observed in October 2012 was higher than the corresponding 271.1 percent General Consumer Price Index (CPI) observed in October 2011. The year-on-year Food inflation has increased by 13.2 percent in October 2012 as compared to the one observed in October 2011. The reason for the increase in the food Inflation rate was that the 338.5 percent Food Consumer Price Index (CPI) observed in October 2012 was greater than the corresponding 298.9 percent Food Consumer Price Index (CPI) observed in October 2011. The total price index of cereals in October 2012 has increased by 19.2 percent as compared to similar month last year which significantly contributed to the rise in the indices of Food and the General Consumer Price Index. Among the food components, Maize and Pulses showed a slight declining trend in October 2012. Moreover, the Non-Food inflation also increased i.e by 20.1 percent in October 2012 as compared to the one observed in October 2011. Rise in Inflation in the Non-food component is mainly due to rise in the prices of Clothing and Footwear, Firewood and Household goods and furnishings.

c) Inflation based on comparison of Current vs. Last month at Country Level

The General CPI for October 2012 has showed a decline of 0.7 percent as compared to the preceding month of September 2012. The monthly inflation rate measures the price change between the two latest months. Although up to date, it can be affected by seasonal and other short term effects.

Budget Year	Inflation Rate based current Vs last month comparison			
	Overall Inflation rate	Food Inflation rate	Non-food Inflation rate	

Most of the components of Food index showed increase as compared to similar month last year (Table 1(b)). Especially, Cereals (19.2 percent), Bread and Other Prepared Food (17.5 percent), Meat (49.0 percent), Milk, Cheese and Eggs (32.0 percent), Vegetables and fruits by (36.1.0 percent), Potatoes, Other Tubers and Stems (31.8 percent), Other Food Items (12.5 percent), Milling Charge by (23.3 percent) and Food Taken Away from Home (27.4 percent). On the other hand, declines were observed in the indices of Pulses (4.5 percent), oils Fats by (10.1 percent), Spices by (37.2 percent) and Coffee and Tea Leaves (4.6 percent),

Table 2(b) reveals the rise in the food index by 17.7 percent is due to the rise in the indices of the regions namely: Addis Ababa 22.9 percent, Afar 26.9 percent, Amhara 20.5 percent, Benishangul Gumuz 10.2 percent, Dire Dawa 23.6 percent, Gambella 38.2 percent, Harari 8.7 percent, Oromia 14.0 percent, SNNP 17.9 percent, Somali 7.9 percent and Tigray 22.7 percent.
