TABLE OF CONTENTS

| | <u>Page</u> |
|--|-------------|
| List of Tables | ii |
| List of Figures | xx |
| PART I. INTRODUCTION AND OBJECTIVES OF THE SURVEY..... | 1 |
| 1. Introduction | 1 |
| 2. Objectives of the Survey..... | 2 |
| PART II. SURVEY METHODOLOGY , DATA COLLECTION AND PROCESSING | 3 |
| 1. Scope, Coverage and Content of the Survey..... | 3 |
| 2. Concepts and Definitions..... | 5 |
| 3. Sample Design | 7 |
| 4. Field Organization | 9 |
| 5. Training of Field Staff | 11 |
| 6. Method of Data Collection | 11 |
| 7. Data Processing..... | 12 |
| a) Editing , Coding and Verification | 12 |
| b) Data Entry , Cleaning and Tabulation..... | 12 |
| PART III. SUMMARY OF SURVEY RESULTS | 13 |
| 1. Land Use Area Estimation..... | 13 |
| 2. Agricultural Households , Holders , Total Land , Average Land Holding Per Household and Average Land Holding Per Holder | 77 |
| 3. Agricultural Households , Holder , Members and Average Household Size | 141 |
| 4. Total Number of Agricultural Households by Size of Holding and Size of Household | 203 |
| 5. Number of Holders by Age and Type of Holding..... | 266 |
| 6. Number of Holders by Sex and Type of Holding | 329 |
| 7. Number of Holders by Educational Attainment and Type of Holding..... | 363 |
| 8. Number of Agricultural Households , Cropland and Average Cropland by Type of Crop and Size of holding | 397 |
| 9. Estimate of Area Under all Crops by Size of Holding | 458 |
| Appendix I Estimation Procedures of Total , Ratio and Sampling Errors | 519 |
| Appendix II Estimates , Their Standard Errors and Coefficient of Variations..... | 523 |

LIST OF TABLES

Estimates and Percentage of Area under Land Use by Size of Holding for Private Peasant Holdings, 1999/2000 (1992 E.C.)

PART I

INTRODUCTION AND OBJECTIVES OF THE SURVEY

1. Introduction

The issue of food security has continual national importance in Ethiopia. To achieve social and political stability the government has to be able to create and maintain food security by issuing the appropriate agricultural policy. Agricultural statistics is just one element that enters into this policy process to formulate, monitor, assess and evaluate the policy. The collection of reliable, comprehensive and timely data on agriculture is thus essential for the above purposes. In this regard, the Central Statistical Authority (CSA) has exerted effort to provide policy makers and users with reliable and timely agricultural data.

This report presents survey results on estimates of land use, number of agricultural households, number of holders, number of household members, average household size, and land by size of holding, number of holders by type of holding, age, sex, and educational status of agricultural holders with in the private peasant holdings sector of the economy. This report consists of three parts where Part I includes the objectives of this annual survey, Part II encompasses scope, coverage, and content of the survey; sample design; field organization; training of field staff; and method of data collection and Part III has survey results.

Estimation procedures and formulations for estimates of totals and variance for total area of land during main (Meher) season are presented in appendix I. Estimates of the standard errors with the corresponding coefficients of variations (CVs) for all land uses are presented in Appendix II.

The general objective of CSA's Agricultural Sample Survey (AgSS) is to collect basic quantitative information on the country's agriculture that is considered essential for development planning, socio-economic policy formulation, food security, etc. The AgSS is composed of four components: crop production forecast survey, Meher season survey, livestock survey, and survey of the Belg season crop area and production.

The specific objective of the Meher season land use survey is to estimate the total land used for various purposes by type of land use and the number of agricultural households, holders, members of agricultural households, average household size, average land holding per household and others. This report is based on the private peasant holdings in sedentary rural areas of the country further divided by regions and zones.

PART II

SURVEY METHODOLOGY, DATA COLLECTION AND PROCESSING

1. Scope, Coverage and Content of the Survey

The 1999/2000 (1992 E.C) annual Agricultural Sample Survey used a sampling frame which was designed to cover the sedentary rural agricultural population in all regions of the country (urban and nomadic areas were not included in the survey). Illustrated in Table A is a breakdown of the sample distribution as expressed by regions, zones and weredas. A total of 56 zones and 415 weredas was actually covered by the survey.

The area sampling unit used for this survey is defined as an Enumeration Area (E.A) as identified for the 1994 Population and Housing Census. For the 1999/2000 AgSS a total of 1450 enumeration areas was selected from all regions of the country. Due to various reasons 5 E.As were not covered in the survey which resulted in the survey actually covering 1445 enumeration areas (E.As). From each of the selected E.As a representative sample of forty agricultural households was selected to estimate the various agricultural population items of interest of the sampled E.A.

Of these forty agricultural households, the first twenty-five were used for obtaining information on area under crops, Meher and Belg season production of major crops, land utilization, agricultural practices, crop damage, and quantity of agricultural inputs used. A total of 35,692 agricultural households was covered and 255,950 fields belonging to these households under different land uses were objectively measured.

| REGION | NUMBER OF ZONES / SP. WEREDAS | | | NUMBER OF WEREDAS | | |
|--------------------------|-------------------------------|-----------|-------------|-------------------|------------|-------------|
| | TOTAL | COVERED | NOT COVERED | TOTAL | COVERED | NOT COVERED |
| TIGRAY ¹ | 5 | 4 | 1 | 33 | 33 | - |
| AFAR ² | 5 | 3 | 2 | 8 | 8 | - |
| AMHARA ¹ | 11 | 10 | 1 | 93 | 92 | 1 |
| OROMIYA | 12 | 12 | - | 171 | 170 | 1 |
| SOMALIE ² | 9 | 3 | 6 | 9 | 9 | - |
| BENISHANGUL_GUMUZ | 3 | 3 | - | 18 | 18 | - |
| SNNP | 14 | 14 | - | 73 | 73 | - |
| GAMBELA ² | 4 | 3 | 1 | 5 | 5 | - |
| HARARI | 1 | 1 | - | 1 | 1 | - |
| ADDIS ABABA ¹ | 6 | 2 | 4 | 5 | 5 | - |
| DIRE DAWA | 1 | 1 | - | 1 | 1 | - |
| TOTAL | 71 | 56 | 15 | 417 | 415 | 2 |

Note

1= Zones not covered in these regions are urban.

2 = Zones not covered in these regions are not inhabited by significant number of sedentary population.

3 = Numbers of total weredas signify those weredas in covered zones of the respective regions.

SNNPR = Southern Nations, Nationalities and Peoples Region.

2. Concepts and Definitions

In order to collect standardized data of acceptable quality the same concepts and definitions must be used by all field enumerators during data collection. Below are defined some of the more important concepts and definitions used for the survey.

Enumeration Area (E.A) : an enumeration area in rural parts of the country is a locality that is less than or equal to a farmers' association in geographical area and usually consists of 150-200 households.

Household : a household may be either,

- a) a one person household, that is a person who makes provisions for his own living without combining with any other person to form part of a multi-person household or
- b) a multi-person household, that is, a group of two or more persons who live together and make common provisions for food and other essentials of living. The persons in the group may pool their incomes and have a common budget to a greater or lesser extent. They may be related or unrelated persons, or a combination of both. These persons are taken as members of the household.

Agricultural household : a household is considered an agricultural household when at least one member of the household is engaged in growing crops and/or breeding and raising livestock in private or in combination with others.

Holder : a holder is a person who exercises management control over the operations of the agricultural holding and makes the major decisions regarding the utilization of the available resources. He has primary technical and economic responsibility for the holding. He may operate the holding directly as an owner or as a manager. Under conditions of traditional agricultural holding the holder may be regarded as the person who with or without the help of others, operates land and/or raises livestock in his own right, i.e. the person who decides on what, when, where and how to grow

crops or raise livestock, and has the right to determine the utilization of the products.

Holding : a holding is all the land and/or livestock kept which is used wholly or partly for agricultural production and is operated as one legal entity by one person alone, or with others without regard to management, organization, size or location.

Size of holding : in this report the size of holding is determined by total area of land under different uses, i.e. area under temporary crops, permanent crops, fallow land, grazing land, wood land and other land.

Parcel : a parcel of holding is any piece of land entirely surrounded by land and/or water and/or road and/or forest etc. which is not part of the holding. It may consist of one or more cadastral units, plots or fields adjacent to each other.

Field : a field is defined as any plot of land which is a parcel or part of a parcel under the same or mixed crops or any other forms of private land holding.

Meher (main) season crop : any crop harvested from Meskerem (September) to Yekatit (February) is considered as Meher season crop.

Belg season crop : any crop harvested between the months of Megabit (March) and Nehase (August).

Temporary crops : crops which are grown under a cycle of less than a year's time sometimes only a few months with an objective to be sown or replanted again for additional production following the current harvest. Continuously grown crops planted in rotation are also considered temporary crops since each is harvested and destroyed by ploughing in preparation for each successive crop.

Permanent crops crops which are grown and occupy land for a long period of time, not requiring replanting for several years after each harvest, are considered permanent crops, but meadows and pastures are excluded.

Grazing land : land used for growing herbaceous forage crops either through cultivation or naturally, is considered to be grazing land.

Fallow land : land which has been or is intended to be kept at rest for at least one agricultural year and a maximum idleness of less than five years is considered fallow land.

Wood land : all tracts of timber, natural or planted and part of the holding, which has value as wood, timber, other wood products and/or used for production. Forest land used for recreational purposes would not be included as wood land.

Other land use : land occupied by the holders' house and/or buildings, parking areas, gardens, barn, wells, ponds, etc. are considered other land uses.

3. Sample Design

The 1999/2000 (1992 E.C.) Meher season Agricultural Sample Survey covered the rural part of the country except two zones in Afar R, one Zone in Gambela Region and six zones in Somalie Region that are predominantly nomadic. A two-stage stratified sample design was used to select the sample. Each zone/special wereda was adopted as stratum for which major findings of the survey are reported except the four regions; namely, Gambela, Harari, Addis Ababa and Dire Dawa which were considered as strata/reporting levels. The primary sampling units (PSUs) were enumeration areas (EAs) and agricultural households were the secondary sampling units.

The survey questionnaires were administered to all agricultural holders within the sample households. A fixed number of sample EAs was

determined for each stratum/reporting level based on precision of major estimates and cost considerations. Within each stratum EAs were selected using probability proportional to size; size being total number of households in the EAs as obtained from the 1994 Population and Housing Census. From each sample EA, 40 agricultural households were systematically selected for the annual agricultural sample survey from a fresh list of households prepared at the beginning of the field work of the annual agricultural survey. Of the forty agricultural households, the first twenty five were used for obtaining information on area under crops, Meher and Belg season production of crops, land use, agricultural practices, crop damage, and quantity of agricultural inputs used. It is important to note that of the total forty agricultural households sampled in each of the selected EAs, data on crop cutting were collected for only the fifteen households (11th-25th households selected).

A total of 1,450 EAs (2.9 % of the total EAs in the rural areas of the country) were selected for the survey. However 5 EAs were closed for various reasons beyond the control of the Authority and the survey succeeded in covering 1445 (99.7 %) EAs. With respect to ultimate sampling units, for the Meher season agricultural sample survey, it was planned to cover 36,250 agricultural households. The response rate was found to be 98.5 %. Estimation procedures of parameters of interest (total and ratio) and their sampling error is presented in Appendix I. Estimates, their standard errors and coefficients of variations are given in Appendix II.

4. Field Organization

All the 22 Branch Statistical Offices of the CSA participated in the survey undertaking, especially in organizing the second stage training, in deploying the field staff to their respective sites of assignment, in supervising the data collection, and retrieving completed questionnaires and submitting them to the head office for data processing. They were also responsible in administering the financial and logistic aspect of the survey within the areas of their assignment. In the data collection of the survey, a total of 1559 enumerators and 331 field supervisors were involved with an average supervisor-enumerator ratio of 1-to-5. To accomplish the data collection operation, all the enumerators were supplied with the necessary survey equipment at the completion of the training. To assist the data collection activities in deployment, supervision and retrieval of completed questionnaires, a total of 123 four-wheel vehicles were used. The following table shows distribution of the field staff and vehicles by branch offices.

**TABLE B : DISTRIBUTION OF FIELD STAFF AND VEHICLES
BY BRANCH OFFICES**

| Branch office | Number of | | |
|---------------|-------------|-------------|----------|
| | Enumerators | Supervisors | Vehicles |
| Mekele | 103 | 22 | 7 |
| Asayita | 66 | 15 | 5 |
| Gondar | 75 | 16 | 6 |
| Debre Markos | 94 | 20 | 8 |
| Dessie | 94 | 20 | 7 |
| Debre Birhan | 61 | 13 | 5 |
| Nazreth | 50 | 11 | 4 |
| Ambo | 66 | 15 | 5 |
| Nekemte | 66 | 15 | 6 |
| Jima | 66 | 15 | 7 |
| Goba | 49 | 12 | 4 |
| Asebe Teferi | 50 | 11 | 4 |
| Jijiga | 66 | 15 | 4 |
| Asosa | 84 | 19 | 6 |
| Awasa | 112 | 22 | 8 |
| Mizan Teferi | 66 | 14 | 6 |
| Arba Minch | 122 | 22 | 8 |
| Hosana | 127 | 25 | 7 |
| Gambela | 33 | 7 | 5 |
| Harar | 49 | 10 | 4 |
| Addis Ababa | 28 | 6 | 4 |
| Dire Dawa | 33 | 6 | 3 |
| Total | 1559 | 331 | 123 |

5. Training of field staff

The field staff training program was carried out in two stages. The first stage consisted of training of staff from the Head Office, Branch Statistical Office heads and senior field supervisors. This training was given for a period of one week at CSA's headquarters in Addis Ababa. Many of these personnel trained in the first stage were assigned to conduct similar training for field supervisors and enumerators for fifteen days in all the twenty-two CSA branch offices which are distributed all over the country. During this second stage training, the field staff were given detailed classroom instruction on the objectives and uses of the AgSS, concepts and definitions of terms used, the method of area measurement, method of crop cutting, correct interviewing procedures, etc.. The training of the supervisors and enumerators also included field practice to reinforce the understanding of the concepts, definitions and theories discussed in the classroom with regard to field measurement and crop cutting methods.

6. Method of Data Collection

Data for the AgSS were recorded on questionnaires using both subjective and objective enumeration methods. Information on agricultural practices (application of fertilizer, pesticide, use of improved seeds and irrigation) were collected subjectively by interviewing the holders in each sampled household.

The objective measurement procedures for area measurement were carried out for the twenty-five selected households from each sampled E.A. This required that all separate fields by land area utilization be physically measured using compass and measuring tape.

7. Data Processing

7.1. Editing, Coding and Verification

In order to insure the quality of the collected survey data an editing, coding and verification instruction manual was prepared, and printed. Then 35 editor-coders and 20 verifiers were trained for two days in the editing, coding and verification operation using the aforementioned manual as a reference and teaching aid.

The completed questionnaires were edited, coded and later verified on a 100% basis before the questionnaires were passed over to the Data entry unit. The editing, coding and verification exercise of all questionnaires was completed in about 40 days.

7.2 Data Entry, Cleaning and Tabulation

Before starting data entry, professional staff of Agricultural Statistics Department prepared edit specifications for personal computers utilizing the Integrated Microcomputer Processing System (IMPS) software for data consistency checking purposes.

The data on the coded questionnaires were then entered into personal computers using IMPS software. The data were then checked and cleaned using the edit specification prepared earlier for this purposes.

The data entry operation involved about 35 data encoders and it took 30 days to complete the job. Finally, tabulation was done on personal computers to produce results as indicated in the tabulation plan.

PART III

SUMMARY OF SURVEY RESULTS

1. Land Use Area Estimation

During the 1999/2000 (1992 E.C) Agricultural Sample Survey data on different land uses were collected. Most of the land within the private peasant holdings was under temporary crops and/or permanent crops. From the survey results it was also found that the remaining portion of land was used as grazing land, wood land, fallow land and/or for some other purposes.

As indicated in the survey results (Summary Table B) the total land area under different land usēs was estimated to be 10.72 million hectares at country level. Out of this 8.47 million hectares (79.02%) of the land was under temporary crops, about 662.19 thousand hectares (6.17%) was under permanent crops, 671.05 thousand hectares (6.26%) was used for grazing land, 550.74 thousand hectares (5.14%) of land was kept as fallow land. 49.85 thousand hectares (0.47%) was used for wood land, and 314.74 thousand hectares (2.94%) was used for some other purposes. The largest portion of the total land holdings (79.02%) was used for cultivating temporary crops while the smallest portion (0.47%) was used for wood land within the privte peasant holding. For details refer to Table 1.1.

Summary Table B. Area of Land in Different Uses

| Land use | Area | |
|----------------------------|-------------|---------|
| | ('000 HA) | Percent |
| Land under temporary crops | 8471.32 | 79.02 |
| Land under permanent crops | 662.19 | 6.17 |
| Grazing land | 671.05 | 6.26 |
| Fallow land | 550.74 | 5.14 |
| Wood land | 49.85 | 0.47 |
| Other land use | 314.74 | 2.94 |
| All land use | 10719.89 | 100 |

In this report, sizes of holdings were classified into seven size groups. These groupings are

- Group I - under 0.10 hectare
- Group II - 0.10 - 0.50 hectare
- Group III - 0.51 - 1.00 hectare
- Group IV - 1.01 - 2.00 hectare
- Group V - 2.01 - 5.00 hectare
- Group VI - 5.01 - 10.00 hectare
- Group VII - 10.01 and above hectares

As illustrated in Table 1.1, of the total private holdings under temporary crops, over one-third (34.75%) of them fall in Group IV, i.e. 1.01 - 2.00 hectares. On the other hand, most of the holdings under permanent crops (56.51%) fall in Group II, i.e. 0.1 - 0.50 hectare. The survey result also indicated that (37.40%) of grazing land, and 43.88% of land kept as fallow and 43.65% of the "wood land" fall in Group II. It should also be noted that 70.79% of the "other land use" falls in Group I which is less than 0.10 hectare. Also, in this Table, the total area of peasant holdings and percentage by size group are presented. The largest estimate (30.00%) of the total area of peasant holdings is found in Group IV. The largest size group (Group VII) accounted for only 2.21% of the total area of peasant holdings. The survey results for land utilization at the regional and zonal levels are presented in Tables 1.3 - 1.13

2. Agricultural Households, Holders, Total Land, Average Land Holding per Household and Average Land Holding per Holder

The survey results indicate that the total number of agricultural households in rural areas (excluding nomadic areas) is estimated to be 10.74 million while the total number of agricultural holders is about 11.02 million. The total land area under different land uses is 10.72 million hectares, and the average land holding per household and per holder are estimated to be 1.00 hectares and 0.97 hectares, respectively. See Summary Table C.

Summary Table C: Agricultural Households, Holders, Total Land Area, Average Land Holding per Household and per Holder

| Item | Number / area |
|---------------------------------------|----------------------|
| Households ('000) | 10738.20 |
| Holders ('000) | 11018.74 |
| Total land use ('000 HA) | 10719.89 |
| Average land holding / household (HA) | 1.00 |
| Average land holding / holder (HA) | 0.97 |

As mentioned earlier sizes of holding have been categorized into seven groups. Based on this classification the estimates of the number of agricultural households and holders falling in each size group respectively are as follows: 1192.88 thousand households (11.11%) and 1195.82 thousand holders (10.85%) in group I; 3168.12 thousand households (29.50%) and 3175.98 thousand holders (28.83%) in group II; 2561.93 thousand households (23.86%) and 2655.57 thousand holders (24.10%) in group III; 2457.94 thousand households (22.89%) and 2520.81 thousand holders (24.83%) in group IV; 1257.77 thousand households (11.71%) and 1346.37 thousand holders (10.68%) in group V; 88.32 thousand households (0.83%) and 109.10 thousand holders (0.60%) in group VI; and 11.24 thousand households (0.10%) and 15.10 thousand holders (0.11%) in group VII.

It can be seen that most of the agricultural households and holders (29.50%) and 28.83%, respectively have a total size of holding ranging from 0.10-0.50 hectares each and fall in group II. The second largest number of

agricultural households and holders fall in group III i.e. 23.86% and 24.10%, respectively.

Unlike the number of agricultural households, most of the land falls in group V, consisting of 33.13% and in group IV consisting of 32.41% of the total land in rural peasant holdings.

It should be noted that only 0.10% of the total agricultural households and 0.11% of the total agricultural holders own more than 10 hectares each, accounting for only 2.49% of the total holding area. Details are given in Table 2.1. Estimates of regional distribution of agricultural household, holders, land use and average land holding per household and per holder are presented in Table 2.2.

3. Agricultural Households, Holders, Members and Average Household Size

As illustrated in the summary table below in 1999/2000 (1992 E.C) the total agricultural households and holders were estimated to be 10.74 and 11.02 million, respectively. The total rural agricultural population (excluding nomadic areas and non agricultural households) was estimated to be 53.68 million. From the survey result, it is also observed that the average rural sedentary agricultural household size is 5.0.

The projected rural population of the country for the same year was about 54.02 million. The difference is attributed to

- a) coverage of only the rural sedentary portion of the population by the survey
- b) the exclusion of nomadic areas from the survey.
- c) the exclusion of non-agricultural households from the survey.

Summary Table D. Number of Agricultural Households, Holders, Household Members and Average Household size

| Items | Number |
|--------------------------|---------------|
| Households ('000) | 10738.20 |
| Holders ('000) | 11018.74 |
| Household members ('000) | 53677.29 |
| Average household size | 5.0 |

As indicated in Table 3.1 the average household size ranges from 4.22 to 7.69 members per household from Group I to Group VII.

4. Total Number of Agricultural Households by Size of Holding and Size of Household

The estimates of agricultural households by size of holding and size of agricultural households are presented in Table 4.1 at country level, in Table 4.2 at regional level and in Tables 4.3-4.13 at zonal level. The percentage distribution of agricultural households by household size is summarized as follows.

Of the total agricultural households, 2.63% of them had only one member each, 25.3% had 2-3 members each, 34.84% had 4-5 members 33.69% had 6-9 members each, 3.54% had 10 and above members each. This result indicates that most of the agricultural households have 4-5 members each while the number of households having only one member each is the smallest. For details, refer to Table E below.

Summary Table E. Total Number of Agricultural Households by Size of Household

| Household size | Household | |
|----------------|---------------|---------|
| | Number ('000) | Percent |
| One member | 282.89 | 2.63 |
| 2-3 members | 2716.85 | 25.30 |
| 4-5 members | 3741.20 | 34.84 |
| 6-9 members | 3617.32 | 33.69 |
| 10 and above | 379.74 | 3.54 |
| Not stated | 0.20 | 0.00 |

LAC : NUMBER OF THE HEADS OF LABOUR HOLDINGS

5. Number of Holders by Age and Type of Holding

Attempt has been made to categorize agricultural holders by their age and type of holding. The types of holding were categorized into three groups as follows:-

Category I crops only

Category II livestock only

Category III combination of crops and livestock

Having the above categories, 1.62 million holders (14.74%) are estimated to fall in Category I, 259.26 thousand holders (2.35%) fall in Category II, and 9.14 million holders (82.91%) fall in to Category III, at national level. (See summary table below).

It can be seen that most of the holders have a combination of crops and livestock and is consistent across all regions and zones. See Tables 5.3-5.13 for details.

Summary Table F. Total Number of Holders by Type of Holding

| Type of holding | Total holders | |
|--------------------|---------------|---------|
| | Number ('000) | Percent |
| Crop only | 1623.73 | 14.74 |
| Livestock only | 259.26 | 2.35 |
| Crop and livestock | 9135.77 | 82.91 |
| All Holding | 11018.75 | 100 |

It should also be noted that, considering the age distribution of holders, the highest number of holders fall in the age group of 30-39 years (24.78%) while the smallest proportion of holders fall in the age group of under 18 years (0.79%). For details refer to Tables 5.1-5.13.

6. Number of Holders by Sex and Type of Holding

The total number of holders is estimated to be 11.02 million of which 8.88 million (80.57%) are males and 2.14 million (19.43%) are females.

Summary Table G. Number of Holders by Sex and Type of Holding

('000)

| Holding type | Sex of holder | | | | Total | |
|------------------|---------------|---------|---------|---------|----------|---------|
| | Male | | Female | | | |
| | Number | Percent | Number | Percent | Number | Percent |
| Crop only | 1162.32 | 13.09 | 461.41 | 21.56 | 1623.73 | 14.74 |
| Livestock only | 133.85 | 1.51 | 125.40 | 5.86 | 259.25 | 2.35 |
| Crop & livestock | 7581.99 | 85.40 | 1553.77 | 72.59 | 9135.76 | 82.91 |
| Total | 8878.17 | 100 | 2140.58 | 100 | 11018.75 | 100 |

Out of the total male holders, 7.58 million holders (85.40%) were engaged in growing crops and raising livestock, whereas 13.09% were growing crops only and 1.51% raising livestock only. Similar trends have also been observed concerning female holders with respect to the type of holding they have, i.e. 72.59 % were engaged in both crop and livestock, 21.56% in crop and 5.86% in livestock only. Based on the survey result one can conclude that 82.91% of holders at country level exercise both crop cultivation and livestock husbandry.

The estimates of holders by sex and type of holding at country level is given in Table 6.1 while the regional and zonal estimates are given in tables 6.2-6.13.

9. Estimates of Area Under All Crops by Size of Holding

As shown in summary Table J the total area under temporary crops was estimated to be 8.47 million hectares out of which 6.75 million hectares is under cereal crops, 1044.91 thousand hectares under pulses, 408.11 thousand hectares under oilseeds and 272.39 thousand hectares under other crops. For details refer to Table 9.1.

Summary Table J. Area Under All Crops

| Crop type | Area | |
|-----------------------|-----------|---------|
| | ('000 HA) | Percent |
| Cereals | 6746.04 | 79.63 |
| Pulses | 1044.91 | 12.33 |
| Oilseeds | 408.11 | 4.82 |
| Other temporary crops | 272.39 | 3.22 |
| Total | 8471.45 | 100 |
| Permanent crops | 662.19 | - |

The distribution of area under cereal crops shows that the largest area was devoted to Teff 2.12 million hectares (31.47%) followed by maize 1.41 million hectares (20.86%).

On the other hand, the distribution of area under pulses shows that the area under horse beans accounted for the largest area (34.37%) followed by chickpeas (17.68%) of the total area under pulses.

In the case of oil seeds, area under Nueg is the largest (62.86%) followed by linseed (18.16%). The survey result also indicates that of the total cropland area, 662.19 thousand hectares (7.25%) was under permanent crops. Of this total area under permanent crops, area under Enset accounted for 40.29% followed by coffee which accounted for 37.04%. Details are given in Table 9.1, for the country and in Tables 9.2-9.12, for regions and zones.

8. Number of Agricultural Households, Cropland and Average Cropland by Type of Crop and Size of Holding

As mentioned earlier, the total number of agricultural households was estimated to be about 10.74 million. Of this total, 9.01 million agricultural households (83.87%) were engaged in the cultivation of temporary crops while about 4.89 million (45.53%) households were engaged in growing permanent crops (see summary Table I). It should be noted here that agricultural households which are engaged in cultivating both temporary and permanent crops are not exclusive (i.e. households might grow both temporary and permanent crops and could be counted twice). It was also indicated earlier that the average crop land per household was estimated at 0.85 hectare, while the average temporary crop land per household was 0.94 hectare, and the average permanent cropland per household was 0.14 hectare. See the details in Table 8.1.

Summary Table I. Land Under Temporary and Permanent Crops

| Items | Number / area |
|--|---------------|
| Land under temporary crops ('000 HA) | 8471.32 |
| Households reporting tempo. crops ('000) | 9006.24 |
| Land under permanent crops ('000 HA) | 662.19 |
| Households reporting perm. crops ('000) | 4889.24 |

7. Number of Holders by Educational Attainment and type of Holding

For the purpose of this survey, educational attainment was categorized into seven groups as follows:-

1. Illiterate (who cannot read and write)
2. attended/completed grades 1-3
3. attended/completed grades 4-6
4. attended/completed grades 7-8
5. attended/completed grades 9-11
6. 12th grade completed
7. attended higher education institution.

Based on the above categories, out of the total 11.02 million holders, 8.12 million (73.68%) were illiterate, 1.48 million (13.40%) had attended/completed grades 1-3, about 884.53 thousand (8.03%) had attended /completed grades 4-6, about 321.31 thousand (2.92%) had attended/completed grades 7-8, about 145.78 thousand (1.32%) had attended/completed grades 9-11, and 51.37 thousand (0.47%) had completed grade 12. (Refer to Summary Table H)

Summary Table H Number of Holders by Educational Attainment

| Educational attainment | Holders | |
|---------------------------------|---------------|---------|
| | Number ('000) | Percent |
| Illiterate | 8118.16 | 73.68 |
| Grades 1-3 | 1476.57 | 13.40 |
| Grades 4-6 | 884.53 | 8.03 |
| Grades 7-8 | 321.31 | 2.92 |
| Grades 9-11 | 145.78 | 1.32 |
| 12 th Grade complete | 51.37 | 0.47 |
| Higher education | 20.72 | 0.18 |
| Total | 11018.76 | 100.00 |

APPENDIX I
ESTIMATION PROCEDURES OF TOTALS,
RATIO AND SAMPLING ERRORS

SHAGGY DOG STORY
WILLIAM STANLEY JONES

BY RAYMOND BRADBURY

Appendix I

Estimation procedures of total, ratio and sampling errors

The following formulas are used to estimate total area of land under specific land use in a given stratum, stratum being Zones or Special Weredas.

$$\hat{A}_h = \sum_{i=1}^{n_h} W_{hi} a_{hi}$$

in which

$$W_{hi} = \frac{M_h H_{hi}}{n_h M_{hi} h_{hi}}$$
 is a basic weight.

1. Notation

h Represents the stratum.

n_h Total number of successfully covered sample EAs in the h^{th} stratum.

M_h Measure of size of the h^{th} stratum, size being agricultural households obtained from the sampling frame.

M_{hi} Measure of size of the i^{th} sample EA in the h^{th} stratum obtained from sampling frame.

H_{hi} Total number of agricultural households currently listed at the time of the survey in the i^{th} sample EA in the h^{th} stratum.

h_{hi} Total number of successfully covered sample agricultural households of the i^{th} sample EA in the h^{th} stratum.

a_{hi} Is the sample total of area values in the i^{th} EA in the h^{th} stratum for the specific land use.

A_h Is estimate of total area under specific land use in the h^{th} stratum.

Moreover, sampling variance of estimate of stratum total of area for a specific land use is estimated by the following formula.

$$Var(\hat{A}_h) = \frac{n_h}{n_h - 1} \left[\sum_{i=1}^{n_h} A_{hi}^2 - \frac{\hat{A}_h^2}{n_h} \right]$$

In estimating the sampling variance by the above formula, selection of EAs within a stratum is assumed to be with replacement. By so doing the variance estimate may be slightly over estimated but it greatly simplify the estimation procedure. Further more the finite population correction (fpc) is ignored in the formula. This is due to the fact that its effect is negligible.

Households, holders and members are estimated in the same manner mentioned above.

Some of the survey estimates take the form of a ratio of two variables (For example, average land holding per household). This ratio estimate is given by:-

$$\hat{R} = \frac{\sum \hat{A}_h}{\sum \hat{H}_h} = \frac{\hat{A}}{\hat{H}}$$

Where

\hat{H}_h is estimate of household in the stratum h

The sampling variance of ratio estimate is approximated by:-

$$Var(\hat{R}) = \frac{1}{\hat{H}^2} [Var(\hat{A}) + \hat{R}^2 Var(\hat{H}) - 2\hat{R} Cov(\hat{A}, \hat{H})]$$

Coefficient of variation for a total of characteristic A in percent is estimated by:

$$CV(\hat{A}) = \frac{\sqrt{Var(\hat{A})}}{\hat{A}} \times 100$$
