

**THE FEDERAL DEMOCRATIC REPUBLIC OF ETHIOPIA
CENTRAL STATISTICAL AGENCY**

**STATISTICAL REPORT ON
The 2010 URBAN EMPLOYMENT UNEMPLOYMENT
SURVEY**

Addis Ababa
November 2010

499 STATISTICAL BULLETIN 499

TABLE OF CONTENT

Table of Content-----	i
List of Statistical Tables -----	iii
Chapter I Background to the Survey -----	1
1.1 Introduction -----	1
1.2 Objectives of the Survey -----	3
1.3 Content and Organization of the survey Questionnaire -----	4
1.4 Concepts and Definitions of Key Variables -----	5
1.5 Organization of the Report -----	6
1.6 Training of Field Staff -----	7
1.7 Organization of the Field Work -----	7
1.8 Data Processing -----	8
1.9 Abbreviations -----	9
Chapter II Survey Methodology -----	11
2.1 Coverage -----	11
2.2 Sample Frame -----	11
2.3 Sample Design -----	11
2.4 Sample Size and Selection Scheme -----	12
Chapter III Size and Socio-demographic Characteristics of Urban Population-----	15
3.1 Introduction -----	15
3.2 Size and Age- sex Structure of Urban Population and Other Socio- demographic Data-- -----	15
Chapter IV Economic Activity Status -----	39
4.1 Introduction -----	39
4.2 Data Collection Approaches of the Economically Active and Non- Active Population -----	41
4.2.1 Current Activity Status Approach-----	42
4.2.2 Usual Activity Status Approach-----	43
4.3 Economically Active and Non-active Population and Activity Rate -----	44
Chapter V Characteristics of the Currently Urban Employed Population-----	109
5.1 Introduction.....	109
5.2 Employment to Population Ratio	109
5.3 Occupation and Industry	110
5.4 Employment Status	111
5.5 Number of Hours Worked.....	111
5.6 Earning from Paid Employment.....	113
5.7 Absence from Work.....	114
5.8 Availability to work Additional Hours	114
5.9 Formal and Informal Employment Sector of the Economic Activity.	115

Chapter V I	Size and Rate of the Currently Urban Unemployed Population	239
6.1	Introduction	239
6.2	Measurement of Unemployment	239
6.3	The Size and Rate of Urban Unemployment	241
Annex I	Survey Questionnaire	279
Annex II	Estimation Procedures of Total, Ratio and Sampling Errors.....	285
Annex III	Estimates and CV's for Selected Tables.....	289

LIST OF STATISTICAL TABLES

	Page
Table 3.1	Estimated Total Population of Urban Areas by Age Group, Sex and Region: 201017
Table 3.2	Distribution of Urban Population, Households and Average Household Size by Region: 201019
Table 3.3	Distribution of Urban Population by Region, Sex and Relationship to the Head of Household: 201020
Table 3.4	Distribution of Urban Population Aged Ten Years and Over by Age Group, Sex, Literacy Status and Educational Attainment - COUNTRY TOTAL: 201022
Table 3.5	Distribution of Urban Population Aged Ten Years and Over by Region, Sex, Literacy Status and Educational Attainment:201024
Table 3.6	Distribution of Urban Population Aged Ten Years and Over by Age Group, Sex and Marital Status, COUNTRY TOTAL: 2010 26
Table 3.7	Distribution of Urban Population Aged Ten Years and Over by Region, Sex and Marital Status: 2010 27
Table 3.8	Distribution of Urban Population Aged Ten Years and Over by Region, Sex, Training Status and Types of Training - COUNTRY TOTAL: 201028
Table 3.9	Distribution of Urban Population by Five Years Age Group, Sex and Sex Ratio - COUNTRY TOTAL: 201037
Table 3.10	Distribution Urban population by Region, Broad Age Group, Sex and Sex Ratio: 201038
Table 4.1	Urban Population Aged Ten years and Over by Age Group, Sex, Activity Status and Rate during the Last Six Months (Usual Status Approach)- COUNTRY TOTAL: 201045
Table 4.1.1	Urban Population Aged Ten years and Over by Age Group, Sex, Activity Status and Rate during the Last Six Months (Usual Status Approach)- TIGRAY REGION: 201046
Table 4.1.2	Urban Population Aged Ten years and Over by Age Group, Sex, Activity Status and Rate during the Last Six Months (Usual Status Approach)- AFFAR REGION: 201047
Table 4.1.3	Urban Population Aged Ten years and Over by Age Group, Sex, Activity Status and Rate during the Last Six Months (Usual Status Approach)- AMHARA REGION: 201048
Table 4.1.4	Urban Population Aged Ten years and Over by Age Group, Sex, Activity Status and Rate during the Last Six Months (Usual Status Approach)- OROMIA REGION: 2010..... 49
Table 4.1.5	Urban Population Aged Ten years and Over by Age Group, Sex, Activity Status and Rate during the Last Six Months (Usual Status Approach)- SOMALI REGION: 201050
Table 4.1.6	Urban Population Aged Ten years and Over by Age Group, Sex, Activity Status and Rate during the Last Six Months (Usual Status Approach)- BENISHANGUL GUMUZ REGION: 2010..... 51
Table 4.1.7	Urban Population Aged Ten years and Over by Age Group, Sex, Activity Status and Rate during the Last Six Months (Usual Status Approach)- SNNP REGION: 201052
Table 4.1.8	Urban Population Aged Ten years and Over by Age Group, Sex, Activity Status and Rate during the Last Six Months (Usual Status Approach)- GAMBELLA REGION: 2010 53
Table 4.1.9	Urban Population Aged Ten years and Over by Age Group, Sex, Activity Status and Rate during the Last Six Months (Usual Status Approach)- HARARI REGION: 201054

Table 4.1.10	Urban Population Aged Ten years and Over by Age Group, Sex, Activity Status and Rate during the Last Six Months Usual Status Approach)- ADDIS ABABA CITY ADMINISTRATION: 2010	55
Table 4.1.11	Urban Population Aged Ten years and Over by Age Group, Sex, Activity Status and Rate during the Last Six Months (Usual Status Approach)- DIRE DAWA ADMINISTRATION: 2010	56
Table 4.2.	Urban population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach) - COUNTRY TOTAL: 2010	57
Table 4.2.1	Urban population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach) -TIGRAY REGION: 2010.....	58
Table 4.2.2	Urban population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach) - AFFAR REGION: 2010	59
Table 4.2.3	Urban population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach) - AMHARA REGION: 2010	60
Table 4.2.4	Urban population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach) – OROMIA REGION: 2010	61
Table 4.2.5	Urban population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach) - SOMALI REGION: 2010	62
Table 4.2.6	Urban population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach) - BENISHANGUL GUMUZ REGION: 2010	63
Table 4.2.7	Urban population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach) - SNNP REGION: 2010	64
Table 4.2.8	Urban population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach) - GAMBELLA REGION: 2010	65
Table 4.2.9	Urban population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach) - HARARI REGION: 2010	66
Table 4.2.10	Urban population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach)- ADDIS ABABA CITY ADMINISTRATION: 2010	67
Table 4.2.11	Urban population Aged Ten Years and Over by Age Group, Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach) – DIRE DAWA ADMINISTRATION: 2010	68
Table 4.	Population of Major Towns Aged Ten years and Over by Sex, Activity Status and Rate During the Last Six Months (Usual Status Approach): 2010	69
Table 4.4	Population of Major Towns Aged Ten Years and Over by Sex, Activity Status and Rate During the Last Seven Days (Current Status Approach): 2010.....	71

Table 4.5	Economically Active Population of Urban Areas Aged Ten Years and Over by Age Group, Sex, Employed, Unemployed and Unemployment Rate During the Last Six Months (Usual Status Approach) - COUNTRY TOTAL: 2010	73
Table 4.5.1	Economically Active Population of Urban Areas Aged Ten Years and Over by Age Group, Sex, Employed, Unemployed and Unemployment Rate During the Last Six Months	74
Table 4.5.2	Economically Active Population of Urban Areas Aged Ten Years and Over by Age Group, Sex, Employed, Unemployed and Unemployment Rate During the Last Six Months (Usual Status Approach) - AFFAR REGION: 2010	75
Table 4.5.3	Economically Active Population of Urban Areas Aged Ten Years and Over by Age Group, Sex, Employed, Unemployed and Unemployment Rate During the Last Six Months (Usual Status Approach) - AMHARA REGION: 2010	76
Table 4.5.4	Economically Active Population of Urban Areas Aged Ten Years and Over by Age Group, Sex, Employed, Unemployed and Unemployment Rate During the Last Six Months (Usual Status Approach) - OROMIA REGION: 2010	77
Table 4.5.5	Economically Active Population of Urban Areas Aged Ten Years and Over by Age Group, Sex, Employed, Unemployed and Unemployment Rate During the Last Six Months (Usual Status Approach) - SOMALI REGION: 2010	78
Table 4.5.6	Economically Active Population of Urban Areas Aged Ten Years and Over by Age Group, Sex, Employed, Unemployed and Unemployment Rate During the Last Six Months (Usual Status Approach)-BENISHANGUL GUMUZ REGION: 2010	79
Table 4.5.7	Economically Active Population of Urban Areas Aged Ten Years and Over by Age Group, Sex, Employed, Unemployed and Unemployment Rate During the Last Six Months (Usual Status Approach) - SNNP REGION: 2010	80
Table 4.5.8	Economically Active Population of Urban Areas Aged Ten Years and Over by Age Group, Sex, Employed, Unemployed and Unemployment Rate During the Last Six Months (Usual Status Approach) - GAMBELLA REGION: 2010	81
Table 4.5.9	Economically Active Population of Urban Areas Aged Ten Years and Over by Age Group, Sex, Employed, Unemployed and Unemployment Rate During the Last Six Months (Usual Status Approach) - HARARI REGION: 2010	82
Table 4.5.10	Economically Active Population of Urban Areas Aged Ten Years and Over by Age Group, Sex, Employed, Unemployed and Unemployment Rate During the Last Six Months (Usual Status Approach) – ADDIS ABABA CITY ADMINISTRATION: 2010	83
Table 4.5.11	Economically Active Population of Urban Areas Aged Ten Years and Over by Age Group, Sex, Employed, Unemployed and Unemployment Rate During the Last Six Months (Usual Status Approach) - DIRE DAWA ADMINISTRATION: 2010	84
Table 4.6	Economically Active Population of Urban Areas Aged Ten Years and Over by Age group, Sex, Employed, Unemployed and Unemployment Rate During the Last Seven Days (Current Status Approach)- COUNTRY TOTAL: 2010	85
Table 4.6.1	Economically Active Population of Urban Areas Aged Ten Years and Over by Age group, Sex, Employed, Unemployed and Unemployment Rate During the Last Seven Days (Current Status Approach)- TIGRAY REGION: 2010	86

Table 4.6.2	Economically Active Population of Urban Areas Aged Ten Years and Over by Age group, Sex, Employed, Unemployed and Unemployment Rate During the Last Seven Days (Current Status Approach)- AFFAR REGION: 2010	87
Table 4.6.3	Economically Active Population of Urban Areas Aged Ten Years and Over by Age group, Sex, Employed, Unemployed and Unemployment Rate During the Last Seven Days (Current Status Approach)- AMHARA REGION: 2010	88
Table 4.6.4	Economically Active Population of Urban Areas Aged Ten Years and Over by Age group, Sex, Employed, Unemployed and Unemployment Rate During the Last Seven Days (Current Status Approach)- OROMIA REGION: 2010	89
Table 4.6.5	Economically Active Population of Urban Areas Aged Ten Years and Over by Age group, Sex, Employed, Unemployed and Unemployment Rate During the Last Seven Days (Current Status Approach)- SOMALI REGION: 2010	90
Table 4.6.6	Economically Active Population of Urban Areas Aged Ten Years and Over by Age group, Sex, Employed, Unemployed and Unemployment Rate During the Last Seven Days (Current Status Approach)- BENISHANGUL GUMUZ REGION: 2010	91
Table 4.6.7	Economically Active Population of Urban Areas Aged Ten Years and Over by Age group, Sex, Employed, Unemployed and Unemployment Rate During the Last Seven Days (Current Status Approach)- SNNP REGION: 2010	92
Table 4.6.8	Economically Active Population of Urban Areas Aged Ten Years and Over by Age group, Sex, Employed, Unemployed and Unemployment Rate During the Last Seven Days (Current Status Approach)- GAMBELLA REGION: 2010	93

CAHAPTER I

BACKGROUND TO THE SURVEY

1.1 Introduction

Statistical information on all aspects of the population is vital for the design, implementation, monitoring and evaluation of economic and social development plan and policy issues. Labour force survey is one of the most important sources of data for assessing the role of the population of the country in the economic and social development process. It is useful to indicate the extent of available and unutilized human resources that must be absorbed by the national economy to ensure full employment and economic well being of the population. Statistics on the labour force further deals with the measurement of economic activity status and its relationship between other social and economic characteristics of the population. Seasonal and other variations as well as changes over time in the size and characteristics of the employment and unemployment can be monitored using up-to-date information from labour force surveys. It is also an input for assessing the meeting of the Millennium Development Goals (MDGs). Furthermore, data on economic activity and other labour force data would be used as a springboard for monitoring and evaluation of the five years growth and transformation plan that launched at different levels of the country.

In order to fill the gap in data requirement for the purpose of socio-economic development planning, monitoring and evaluation, the Central Statistical Agency (CSA) has been providing labour force and related data at different levels with various contents and details. These include the 1976 Addis Ababa Manpower and Housing Sample Survey, the 1978 Survey on Population and Housing Characteristics of Seventeen Major Towns, the 1980/81 and 1987/88 Rural Labour Force Surveys (RLFS). Also, the 1984, 1994 and 2007 Population and Housing Censuses and the 1999 and 2005 National Labour Force Surveys provided a comprehensive national labour force data representing both urban and rural areas.

Considering the dynamic and sensitive nature of the sector and also in response to the demands of different data users, the CSA had launched Urban Employment Unemployment Survey program since 2003. The Agency conducted four surveys in four rounds, that is, October 2003, April 2004, April 2006 and May 2009. The results of these surveys were published in statistical and analytical Bulletin number 301, 319, 373,469 and 477. The current Urban Employment and Unemployment Survey, which was conducted from May 20 - June 5, 2010 is the fifth series. Unlike the previous surveys, the May 2009 and the current survey of May 2010 have collected information from selected major towns with population size 100,000 and above including regional capitals.

These survey results mainly provide data on the main characteristics of employed and unemployed, that is, the work force engaged or available to be engaged in the production of economic goods and services and its distribution in the various sectors of the economy during a given reference period.

To capture child labour data, the former minimum age limit 10 years was lower down to 5 years during the survey periods May 2009 and May 2010. Therefore, the data in these surveys was collected from those persons aged five years and over. However, for the purpose of measuring the economic activity status based on Ethiopian situation the lower age limit was fixed at ten years. This is because children in rural and urban areas used to work at their early age such as collection of fire wood, looking after cattle, shoeshine, street vendor, petty trading...etc. Therefore, the May 2010 Urban Employment and Unemployment Survey statistical report is mainly aimed at providing information on the economic characteristics of the population aged ten years and over.

In addition, a separate section that deals with filtering question for informal employment sector were also attached to the main questionnaire as a module. Except this section, almost similar questions that were used for the fourth round are administered in this series. This statistical report presents a brief introduction of each chapter including basic concepts based on ILO standard definitions together with statistical tables.

1.2. Objectives of the Survey

The 2010 Urban Employment and Unemployment Survey program was designed to provide statistical data on the characteristics and size of the economic activity status i.e. employed, unemployed population of the country at urban levels on annual basis. The data obtained from this survey will be useful for policy makers, planners, researchers, entrepreneur, and other data users.

The specific objectives of the 2010 Urban Employment and Unemployment Survey are:

- collect statistical data on the potential manpower and those who are available to take part in various socio-economic activities;
- update the data and determine the size and distribution of the labour force participation and the status of economic activity for different sub-groups of the population at different levels of the country; and also to study the socio-economic and demographic characteristics of these groups;
- identify the size, distribution and characteristics of employed population i.e. working in the formal or informal employment sector of the economy and earnings from paid employees and its distribution by occupation and Industry...etc;
- provide data on the size, characteristics and distribution of unemployed population and rate of unemployment;
- provide data that can be used to assess the situation of women's employment or the participation of women in the labour force;
- Provide the generated time series data to trace changes over time;

1.3. Content and Organization of Survey Questionnaire

The survey questionnaire is organized into six sections;

- | | |
|-------------|--|
| Section - 1 | Area identification of the selected household: this section deals with area identification of respondents such as region, zone, wereda, etc. |
| Section - 2 | Particulars of household members: it consists of the general socio-demographic characteristics of the population such as age, sex, relationship to the head of household, literacy status educational levels, types of training and marital status. |
| Section - 3 | Economic activity during the last seven days: this section deals with whether persons were engaged in productive activities during the last seven days prior to date of interview, the status and characteristics of employed persons such as occupation, industry, employment status, hours of work, employment sector /formal and informal employment sector/ and earnings from paid employment. |
| Section - 4 | Unemployment rate and characteristics of unemployed persons: this section focuses on the size, distribution and characteristics of the unemployed population and unemployment rate only for those aged 10 years and over. |
| Section - 5 | Economic activity during the last six months: this section contains Information on the economic activity status of the population in the long reference period i.e. during the last six months. |
| Section - 6 | Filtering questions on the informal sector of Employment. |

The survey has used a structured questionnaire to solicit the required data. Before taking its final shape, the draft questionnaire was tested by undertaking a pilot study in selected kebeles (lower administrative unit) in the city of Addis Ababa. Based on the result of the pilot study the content, layout and presentation of the questionnaire was amended. The questionnaire used in the field for data collection was prepared in Amharic language. Most questions have pre coded answers and column numbers were assigned for each question. A copy of the questionnaire translated to English language is attached as Annex I of this report for reference.

1.4. Concepts and Definitions of Key Variables

Some of the major operational definitions of basic concepts are given below. Moreover, other concepts and definitions related to the economic activity status are provided under respective chapters.

Urban Center: it is defined as a locality with 2000 or more inhabitants. In this survey, however, for practical purposes an urban center includes the following regardless of the number of inhabitants.

- a) All administrative capitals
 - i) Regional capitals
 - ii) Zonal capitals not included in (i)
 - iii) Wereda capitals not included in (i) and (ii)
 - iv) Localities with Urban Dweller's Association (UDAs) not included in (I-iii).
- b) Municipal town not included in item (a) above.
- c) All localities which are not included either in item (a) or (b) above, having a population of 1000 or more persons, and whose inhabitants are primarily engaged in non-agricultural activities. Note that localities with population less than 1000 persons should be considered as rural.

Major Urban Centers: For the purpose of this study, major urban center include those selected urban centers with population 100,000 and above. It also includes region capitals irrespective of their population size.

Urban Kebele: is the lowest administrative unit in an urban center with its own jurisdiction. It is an association of urban dwellers (commonly known as kebele) formed by the inhabitants.

Enumeration Area (EA): is a unit of land delineated for the purpose of enumerating population and housing units without omission and duplication. An EA in rural areas usually consists of 150-200 households. On the other hand, an EA in urban areas constitutes 150-200 housing units.

Household: Consists of a person or group of persons, irrespective of whether related or not, who normally live together in the same household and housing units and have common cooking and eating arrangements.

Housing Unit : is defined as a separate and independent place of abode either intended for habitation or not intended for habitation but was occupied as a living quarter by a household during the survey period. Although intended for habitation by one household, a housing unit may, at the survey be occupied by one or more households or may be used partly for living and partly for establishment.

Head of Household: is a person who provides economic supports or manages the households. The head of the household is selected by household members for some reasons of his age or respect regardless of their sex.

Usual Member of a Household: a person is considered as usual members of a household if he or she is:-

- a) a person who continuously live/reside at least for six months and have a common cooking and eating arrangements with the household; or
- b) a person who is temporarily absent from the household at the time of the survey but his absence has not violated the six months criterion.
- c) House maids, guards, baby sitters, etc...with no other dwelling and who were staying with the household at the time of the survey.
- d) Persons who plan to live more than six months due to searching for job and transfer from job ...etc.

1.5. Organization of the Report

This statistical report contains seven chapters. The first chapter covers background to the survey, where the objectives and the contents of the survey questionnaire, training of field staff, organization of field work, concepts and definitions of key variables. Chapter II deals with the survey methodology, where scope, coverage, sample size and response rate. Chapter III deals in brief with the size and socio-demographic characteristics of the urban population such as the distribution of population by age group and sex. Chapter IV presents data on the economic activity status of the population aged ten years and over using the usual and current status approach. Chapter V explores the size, characteristics and distribution of the employed population aged ten years and over. Chapter VI focused on the size, characteristics and distribution of the unemployed population and unemployment rate aged ten years and over. Annex I provides survey questionnaire English version, while estimation procedures of total, ratio and sampling errors; and estimates and CV's for selected tables are presented in Annex II and Annex III, respectively.

1.6. Training of Field Staff

The training program of enumerators, supervisors and other field office staff was conducted in two stages. The first stage training of trainers was conducted at the headquarters of the Central Statistical Agency (CSA), in Addis Ababa for five days including half day field practice. The participants were selected from professionals and associate professionals with long time experiences, branch office statisticians and coordinators who were supposed to train enumerators and supervisors during the second stage of training conducted at the branch statistical offices of CSA. The training was guided by an enumerator and supervisor manuals, which consists of detailed explanation of concepts, ideas and instructions on how to fill each entry in the questionnaire.

The second stage training undertaken at the CSA branch offices. The trainers were those who were trained at the head office and they have conducted similar training for enumerators and field supervisors for ten days. The training consisted of theoretical classroom discussions on concepts, definitions and techniques of completing the questionnaire as well as mock interview. The class discussions were intended to exchange experiences among participants and pinpoint the areas of the survey questions that need more care and attention. There was also one day field practice for interviewing of the households and/or household members. The objectives of mock and practical interviewing of households were twofold. First, it enabled to assess how well the classroom theoretical discussions were understood by all participants so that they could convey the same message to the enumerators and the supervisors. The second objective was to examine the difficulty, which would likely be encountered during actual fieldwork.

1.7. Organization of the Fieldwork

In order to carry out this survey with the desired level of quality, there was a need to organize a large staff that performs the various survey activities. The 25 Branch Statistical Offices of the Agency carried out the data collection operation. These offices have permanent and contract enumerators stationed in the selected enumeration areas. The data collection operation of the survey involved a total of about 695 enumerators, 48 coordinators and 170 field supervisors with an average supervisor to enumerator ratio of 1: 4.

The interviews have been done by canvassing from house-to-house. Information was collected from the head of the household or from other responsible household member. The enumerators were assigned to one sampled enumeration area, where he/she could easily converse with the respondent's dialect. However, in some cases whenever enumerator faces difficulty to converse with the respondent's dialect interpreters were used. Data collection from the field took place from 20 May - 5 June 2010.

During the survey data collection operation, close and regular supervision was undertaken at various levels. Immediately after the commencement of the data collection exercise the supervisors had made spot checking, close supervision, re-interviewing and a thorough scrutiny of filled-in questionnaires to ensure that the data collection activities are taking place according to the given instruction. The branch statistical office heads, coordinators and statisticians were also made supervision of the data collection operation. Moreover, senior staff members from the CSA head office made field supervision activities in seven branches for a week at different towns.

1.8. Data Processing

The filled-in questionnaires that were retrieved from the field were first subjected to manual editing and coding. During the fieldwork the field supervisors and the heads of branch statistical offices have checked the filled-in questionnaires and carried out some editing. However, the major editing and coding operation was carried out at the head office. All the edited questionnaires were again fully verified and checked for consistency before they were submitted to the data entry by the subject matter experts.

Using the computer edit specifications prepared earlier for this purpose, the entered data were checked for consistencies and then computer editing or data cleaning was made by referring back to the filled-in questionnaire. This is an important part of data processing operation in attaining the required level of data quality. Consistency checks and re-checks were also made based on frequency and tabulation results. This was done by senior programmers using CSPro software in collaboration with the senior subject experts from Manpower Statistics Team of the CSA.

1.9 ABBEREVATIONS

CSA- Central Statistical Agency

EA - Enumeration Area

HH- Households

ICSE- International classification of Status in Employment

ILO- International Labour Organization

CSPRO- Census and Survey Processing system

ISCO- International Standard Classification of occupation

ISIC- International Standard Industrial Classification of all economic activities

ICLS- International Conference on Labour Statistics

KILM- Key Indicators of Labour Market

MDGs- Millennium Development Goals

NIHSP- national Integrated Household Survey Program

NLFS - National Labour Force Survey

NS- Not Stated

NOIC- National Occupation and Industrial Classification

PASDEP- Plan for Accelerated and Sustained Development to End Poverty

PSU- Primary Sampling Unit

RLFS- Rural Labour Force Survey

SNA- System of National Account

SNNPR- southern Nations, Nationalities and peoples Region

TVET- Technical Vocational Educational Training

UEUS- Urban Employment and Unemployment Survey

UBEUS- Urban Bi-annual Employment and Unemployment Survey

CHAPTER II

SURVEY METHODOLOGY

2.1 COVERAGE

The 2010 Urban Employment and Unemployment Survey (UEUS) covered all urban parts of the country except three zones of Afar, Six zones of Somali, where the residents are pastoralists. This survey follows household approach and covers households residing in conventional households, thus population residing in the collective quarters such as universities/colleges, hotel/hostel, monasteries and homeless population etc are not covered by this survey.

It was initially planned to cover 660 EAs and 19800 households in the survey, but ultimately 100% of EAs and 99.68% of households were successfully covered.

2.2 SAMPLING FRAME

The list of households obtained from the 2007 population and housing census is used to select EAs. A fresh list of households from each EA was prepared at the beginning of the survey period. The list was then used as a frame in order to select households from sample EAs.

2.3 SAMPLE DESIGN

For the purpose of the survey the country was divided into two broad categories. That is major urban center and other urban center categories.

Category I:- Major urban centers:- In this category all regional capitals and four other major urban centers that have a high population size as compared to others were included. Each urban center in this category was considered as a reporting level. The category has a total of 15 reporting levels. In this category, in order to select the sample, a stratified two-stage cluster sample design was implemented. The primary sampling units were EAs of each reporting level. From each sample EA 30 households were then selected as a Second Stage Unit (SSU).

Category II: - Other urban centers: Urban centers in the country other than those under category I were grouped into this category. A domain of other urban centers is formed for each region. Consequently 8 reporting levels were formed in this category. Harari, Addis Ababa and Dire Dawa do not have urban centers other than that grouped in category I. Hence, no domain was formed for these regions under this category.

A stratified three stage cluster sample design was adopted to select samples from this category. The primary sampling units were urban centers and the second stage sampling units were EAs. From each EA 30 households were finally selected at the third stage and the survey questionnaires administered for all of them.

2.4 SAMPLE SIZE AND SELECTION SCHEME

Category I: - In this category 394 EAs and 11,820 households were selected. Sample EAs from each reporting level in this category were selected using probability proportional to size systematic sampling; size being number of households obtained from the 2007 population and housing census. From the fresh list of households prepared at the beginning of the survey, 30 households per EA were systematically selected and covered by the study.

Category II:-81 urban centers, 266 EAs and 7,980 households were selected in this category. Urban centers from each domain and EAs from each urban center were selected using probability proportional to size systematic method; size being number of households obtained from the 2007 Population and housing census. From the listing of each EA then 30 households were systematically selected and the study performed on the 30 households ultimately selected.

The distribution of planned and covered EAs and households and the Estimation procedures are given in the appendix.

Appendix I Number of planned and actually covered sampling units (EAs and households) of the 2009 (2001 E.C) Urban Employment and unemployment survey (UEUS).

CHAPTER III

SIZE AND SOCIO- DEMOGRAPHIC CHARACTERISTICS OF URBAN POPULATION

3.1 Introduction

The figure in this section refers to the de jure population residing in conventional households. The de jure population comprises all the people who belong to a given area at a given time by virtue of usual residence. Thus, excluded are visitors, persons residing in collective quarters (hotel/hostel, boarding schools, prisons...etc.) as well as homeless persons.

This chapter presents some highlights on the basic socio-demographic characteristics of the general population. The topics covered in this chapter include population size; distribution of the population by age and sex; sex ratio, literacy status, educational level, training status and type of training.

Size and Age-Sex Structure of Urban Population and Other Socio-Demographic Data

This section presents a set of tables that depict the main socio-demographic characteristics of the urban population as of 2010. The distribution of estimated total population of urban areas by age group, sex and region is shown in Table 3.1. Table 3.2 presents the distribution of urban population, households and average household size by region. The average household size is computed from the total population to that of the total households. Data on household size and distribution of persons per household can sometimes be used as a proxy measure of crowdedness of population and has a great implication to health and housing problem.

The distribution of urban population by region, sex and the relationship of the respondents to that of the head of household is presented in Table 3.3. The literacy status and educational attainment of urban population at country level by age group and sex is given in Table 3.4. Similar information by each region and sex is also given in Table 3.5. As clearly indicated in these tables secondary education refers to those persons who did not complete high school education, that is, grades 9 - 11 in old curriculum and grade 9 in new curriculum, while secondary education completed covers those persons who completed high school education that means grade 12 in old curriculum and grade 10 in new curriculum.

The 2010 Urban Employment and Unemployment Survey also collected data on marital status of urban population aged ten years and over. The marital status distribution of urban population of the country classified by age group and sex is presented in Table 3.6. Also, the distribution of marital status of urban population by region and sex is shown in Table 3.7. Table 3.8 contains the status of training and type of training received classified by region and sex.

The overall sex ratio for successive five-year age group for urban areas of the country is presented in Table 3.9. The last table of this chapter that is, table 3.10 shows the distribution of urban population by region, broad age group, sex and sex ratio. Sex ratio is defined as the number of males per 100 females in a given population. The sex composition has an effect on economic activities through changing the relative size of the working population.

CHAPTER IV

ECONOMIC ACTIVITY STATUS

4.1 Introduction

Statistical data on the economic activity status is essential for planning and formulating policies on the development of human resources of the country. The collection of data on the economic activity status refers to that of the size and distribution of the work forces of economically active and non-active population during a given reference period at a specified area and also its distribution in the various sectors of the economy.

In this survey, information was collected on economic participation of all persons aged five years and over. For the purpose of capturing information for economic activities of children, the lower age limit was fixed at five years and hence data were collected from persons aged five years and over. However, for measuring the economic activity status of adult, the statistical tables are produced based on the population aged ten years and over which is divided into broad categories of economically active and non active population.

The 2010 Urban Employment and Unemployment Survey administered detailed labour force questions to measure the economic activity status in urban areas of the country. This section focused on the economic activity status of the population which includes:

- a) Economic activity status and activity rate and reason for not being economically active during the last seven days;
- b) Economic activity status and activity rate and reason for not being economically active during the last twelve months;
- c) The distribution of population aged ten years and over whether currently or usually employed or unemployed i.e. during the reference period of the last seven days or during most of the last twelve months, respectively;

The 2010 Urban Employment and Unemployment Survey followed the ILO international standard definitions of economic and non-economic activities. The concept of economic

activity as adopted by the 13th International Conference on Labour Statistics (ICLS,1982) is defined in terms of the production of goods and/or services that falls within the United Nations System of National Accounts (SNA) production boundary (ILO, 1990). In this survey, economic/productive activity is defined as work, which involves the production of goods and /or services for sale or exchange. In addition, production of goods and services for own consumption or own uses are also considered as economic activities. These include production of primary products (agriculture, hunting, fishing, forestry and logging, mining and quarrying), for own consumption; processing of primary products by the producers themselves; production of other commodities where part of it is sold on the market; and own account construction and fixed asset formation (expected life use of one year or more). Such economic activities could be performed for an individual, family or private enterprise, government establishment or social organization. The remuneration may be on daily, weekly, monthly, yearly or contract basis. The practical activities of apprentices are also considered as economic activities. On the other hand, unpaid household chores such as preparing food, cleaning the house, taking care of children are not considered to be economic activities. Similarly, unpaid community and volunteer services are classified as non-economic activities.

This chapter presents the main statistical tables of the survey on the economically active and non-active population as well as reason for not being active during specified reference period. Persons aged ten years and over who were productively engaged or available to be engaged during the reference period were included as economically active persons. In other words, the economically active population comprises all persons age ten years and over who were employed or unemployed in the reference period. The complement, i.e., those who neither engaged nor available to furnish their labour were considered as economically non- active or inactive population.

4.2 Data Collection Approaches of the Economically Active and Non-active Population

In the 2010 Urban Employment and Unemployment Survey, the two approaches were used in the collection of data on economic activity status, that is, current and usual activity status approaches. The main difference between these two approaches is the length of the reference period. The current activity status approach measures the economic activity based on a short reference period of seven days before the date of interview. In this approach, all persons aged ten years and over who were productively engaged or available to be engaged during the reference week were considered as currently economically active. On the other hand, the usual activity status approach measures the economic activity based on the long reference period of the twelve months prior to the date of interview. In the usual activity status approach, all persons aged ten years and over who were engaged or available to be engaged in the production of economic goods and services during most of the year or in the cases of this survey during most of the last six months were classified as usually economically active.

In the rural areas to capture the slack and peak periods in the agricultural activities, a longer reference period (usual activity status approach) is found to be more appropriate to determine the overall economic activity status of the rural population. On the other hand, in the urban areas, the activities are relatively less affected by seasonal variations and hence shorter reference period or the current activity status approach was found to be more convenient. With this understanding, care should be taken when comparing the results of this survey to that of the retrospective data in relation to the economic activity status variables by urban and rural areas.

Despite the aforementioned facts, in the 2010 survey results some of the figures such as activity status, activity rate, reason for inactivity, employed, unemployed and unemployment rate are presented using the two approaches, that is, the current and usual activity status approach for urban areas of the country, each region urban and selected major towns.

4.2.1 Current Activity Status Approach

The current activity status approach measures the economic activity status in relation to a short reference period, that is, the seven days prior to the date of the interview. In this approach a series of inquiries related to engagement in economic activity, seeking and availability to work, reason for not being seeking or available to work, etc., were administered to determine the economic activity status of the population during the reference week of the last seven days. These questions were presented to those population aged ten years and over and used to divide these population into the three mutually exclusive categories: employed, unemployed, and not in the labour force. The employed and the unemployed population together make up the labour force or the currently active population. The third category, that is, those not in the labour force, represented the population not currently active.

The economically active population comprises all persons aged ten years and over who were employed or unemployed in the reference period. The employed population based on the current activity status approach consists of those who were engaged in productive activity at least for four hours during the seven days prior to the date of the interview. Persons who had regular jobs, or business, or holdings to return to but who were temporarily absent from work (not at work or worked less than four hours) for various reasons such as illness or injury, holiday or vacation, strike or lock out, and seasonality of work, annual leave, temporary closure of establishment were also considered as employed. For a person to be considered as absent from work, he/she must have formal attachment to the job.

The currently unemployed population, which is defined in detail in Chapter VI, consists of those persons without work but looking for work or available and ready to work if any job is found during the reference period of the coming one month. The reference period of the coming one month refers to the survey week plus the next three weeks. If a

person who is looking for work but engaged in productive activity during the reference period is recorded as employed but not as unemployed.

4.2.2 Usual Activity Status Approach

In the usual status approach, all persons aged ten years and over were asked to report whether they were engaged in productive activities during most of the last six months prior to the survey date. Those who were engaged in productive activities during the reference period were classified as usually employed. In the cases of persons engaged in agriculture, it was decided to classify them in the usually employed category if they have worked during most of the main agricultural season of the reference period. Persons who responded that they were not engaged in productive work were further asked the reasons why they were not so engaged during most of the six months prior to the survey date. Those who were not working during most of the reference period and were actively looking for work considered as usually unemployed. The usually employed and the usually unemployed persons together make up the usually active population. On the other hand, those who were not engaged in productive activity during most of the last six months for the following reasons such as engaged in homemaking activities, attending education, illness, old age/pensioned etc. are classified as population not usually active or economically non-active.

According to the ILO recommendations (1990), if a person experienced a combination of the three activity status and reported equal number of weeks for these activities during the last six months, their economic activity status was assigned based on the priority rule which favors or give the advantage to the economically active over economically non-active and employed over the unemployed.

4.3 Economically Active and Non-active Population and Activity Rate

Based on the above classification of economic activity status, the size and activity rates that were obtained using the usual status approach (i.e., during most of the last six months) for urban areas of the country and for each region by age group and sex are presented in Tables 4.1 and 4.1.1- 4.1.11, respectively. The corresponding figures for the current status approach are shown in Table 4.2 and 4.2.1 - 4.2.11.

The extent of the economic activity of the population is measured using economic activity rates. Economic activity rate or economic participation rate is computed as the percentage of the economically active population over the total of the active plus non-active population aged ten years and over. The usual and current economic activity status, that is, the size of economically active and the non-active population and activity rate of selected major towns by sex is presented in Table 4.3 and 4.4.

Tables 4.5 and 4.5.1 - 4.5.11 show the distribution of the economically active population according to whether they were employed or unemployed and unemployment rate during the last six months by age group, sex for urban areas of the country total and for each region. Tables 4.6 and 4.6.1 - 4.6.11 exhibit similar information for the last seven days classified by age group and sex for the country total and for each region. Similarly, Table 4.7 and 4.8 present analogous information only by sex for selected major towns.

The distribution of economically non-active population of urban areas by age group, sex and reason for not being active (for those who were not so engaged) during the last six months and the last seven days for country total are presented in Table 4.9 and Table 4.10, respectively. The corresponding figures referring to the last six months and the last seven days i.e. the usual and the current status approach classified by region and sex are presented in Tables 4.11 and 4.12. The reasons are classified as: students, home makers, disabled, illness, too young, old age /pensioned... etc.

CHAPTER V

CHARACTERISTICS OF THE CURRENTLY URBAN EMPLOYED POPULATION

5.1. Introduction

The previous chapter has defined the economically active population to be the sum of the employed and the unemployed population. This chapter presents statistical data on the size, distribution and characteristics of the currently employed population based on the definition given in chapter IV. The survey has collected the following information regarding the characteristics of the currently employed population:

- a) Main type of occupation;
- b) Main product or service of the establishment or industry;
- c) Employment status for main activity and terms of employment;
- d) Reasons for absence from work for those employed persons who worked less than four hours or does not work at all but have formal job attachment during the reference period;
- e) Amount of earnings from paid employees;
- f) Hours worked per week and
- g) Whether employed persons were available or seeking to work additional hours.
- h) Sector of the economy (Formal or informal employment sector);

5.2. Employment to Population Ratio

According to the 18 Key Indicators of Labour Market (KILM) used by the ILO, employment to population ratio is calculated as a percentage of total employed persons to that of the working age population (ILO, 1999). The distribution of employment to population ratio for urban areas of the country by age group and sex is shown in Table 5.1. The corresponding figures for each region are presented in Table 5.1.1 - 5.1.11. The data for employment to population ratio for the total major towns and each selected major towns by age group and sex are presented in Table 5.2 and 5.2.1 - 5.2.16, respectively.

5.3. Occupation and Industry

In this survey, the currently employed persons were asked about the type of main activity such as occupation and major product or service of the establishment or industry in which they were engaged during the survey reference period. The questions used to identify the type of occupation and industry, were left open ended so that they will be filled in with the fullest description and its code in the field. For those employed persons engaged in multiple activities, the activity that took the largest share of the respondents' time was taken as the main type of activity.

The responses of the descriptions and codes for the type of occupation and industry filled in by enumerators were further checked and edited at the CSA head quarters in Addis Ababa using the National Occupational and Industrial Classifications (NOIC) code-book. The NOIC codes were adopted from the International Standard Classification of Occupation (ISCO-88) and International Standard Industrial Classification (ISIC, 1993) by taking into account the prevailing national socio-economic conditions.

The NOIC uses a 3-digit coding systems corresponding to 3 level classifications in successively finer detail. In the cases of occupation and industry, the levels are ordered as major divisions, sub major divisions, and minor divisions. The occupational classification was categorized into 9 major groups, 28 sub major groups and 113 minor groups. The industrial classification contains, 13, 60 and 159 major, sub major and minor divisions, respectively.

The distribution of employed population of urban areas by major occupational groups, age group and sex for the country total and each region is presented in Table 5.3 and 5.4, respectively. Table 5.5 presents the distribution of employed population by major occupation, sex and for each selected major towns. The distribution of employed population by minor occupational groups for each region classified by sex appears in

Table 5.6. One should note that in Table 5.6 and 5.10 major and sub major occupation and industrial classification are written in capital letter, while minor occupation and industrial classification are written in small letter, respectively. Analogous information that deals with the industrial divisions are also shown in Table 5.7 to 5.10.

5.4. Employment Status

Employment status of a person indicates the level of involvement and degree of decision-making in his main activity. In this survey employed persons were asked about the employment status of their main activity which was classified into: employer, paid employees, self-employed, unpaid family worker, apprentice, member's of producer's, cooperative and others categories. Paid employees were further disaggregated into employees-government, employees government parastatal, employees NGO's, employees private organization, employees domestic and other paid employees.

Table 5.11 and Table 5.12 present the distribution of status in employment for urban areas of country total and each region by age group and sex. The distribution of status in employment of the employed population of major towns classified by sex is presented in Tables 5.13. Table 5.14 contains data on major occupational groups classified by major industrial divisions and sex for urban areas of the country total. The cross classification of status in employment by major industrial divisions and sex for a country total is shown in Table 5.15. Also, the figures for status in employment by major occupation and sex for country total are presented in Table 5.16.

5.5. Number of Hours worked

The absence of standard working hours and irregular nature of working days in the informal sectors or in the self employment, data collection as well as getting accurate data on hours of work were found to be difficult. In addition, the reliability of the data collection is likely to be affected due to memory lapse and lack of knowledge or information about the concepts of time on the part of the respondent. Thus, considering

the inherent data collection problem on hours of work in developing countries, the figures presented in these tables should be regarded as indicative and not the true levels of intensity of work.

The 2010 Urban Employment and Unemployment Survey included questions on the number of hours worked for two purposes. First, the response on the number of hours worked during the seven days prior to the date of the interview is used to classify the respondents as employed or not on the basis of the given criteria of the minimum required hours of work. As described in Chapter IV persons who worked at least four hours or more, and those who were not worked or worked less than 4 hours but had a job to return to were considered as employed. The rest of persons were then subjected to other filtering questions for unemployment and inactivity. The second objective of including questions on number of hours worked was to gather data on intensity of work among the employed population.

In this survey, all persons who were engaged in productive activities during the seven days prior to the date of interview were asked to provide the number of hours they worked in all of their productive activities. The response was recorded for each of the days in a separate notebook so as to get the total actual hours of work during the reference week. Then the hours so obtained were added together for the week and finally filled in the main questionnaire.

According to the resolution concerning statistics on hours actually worked that adopted by the tenth ICLS in 1962 (ILO, 1976), in this survey, the hours actually worked included:

- a) Hours actually worked during normal periods of work and time spent for waiting for the market;
- b) Time worked in addition to hours worked during normal periods of work, and generally paid at higher rates than normal rates (overtime);
- c) Time spent at place of work on activities such as the preparation of the work place; repairing maintenance, preparing and cleaning of tools and others;

- d) Time spent at the place of work waiting or standing by for such reasons as lack of supply of work, break down of machinery, or accidents, or time spent at the place of work during which no work is done but for which payment is made under a guaranteed employment contract and
- e) Time corresponding to short rest periods at the work place including tea and coffee breaks;

According to the resolution in recording the number of hours worked, care was taken to exclude hours paid for but not worked, such as paid annual leave, paid public holidays or paid sick leave. Also excluded are meal breaks, time spent on travel from home to work and vice versa /for those who have specified place of work/, and hours spent on household activities that were not considered as productive. For employed persons who were not at work during the seven days prior to the date of interview, the number of hours of work is recorded as zero. On the other hand, any time that employed persons have spent in productive activity in places other than work site is considered as working hour.

Table 5.17 presents the distribution of the number of hours worked during the last seven days by age group and sex at country urban level. Similarly, the distribution for each region classified by sex appears in Table 5.18. The distribution of number of hours worked by major industrial divisions, major occupation, and status in employment for country total disaggregated by sex are shown in Table 5.19, 5.20 and 5.21, in that order.

5.6. Earning from Paid Employment

Paid employment jobs are those jobs where the employees hold explicit (written or oral) or implicit employment contracts, which give them a basic remuneration. Some or all of the tools, capitals equipment, information systems and/or premises used by the employees may be owned by others, and the employees may work under direct supervision or according to the strict guidelines set by the owner(s) or persons in the owners' employment. Persons in "paid employment" jobs are typically remunerated by

wages and salaries, but may be paid by commission from sales, by piece rates, bonuses or in kind payments such as food, housing or clothing. In this survey, earnings for paid employees refer to gross remuneration and include bonus, overtime, allowances and other benefits that are obtained only from the main job.

Table 5.22 shows the distribution of paid employees for urban areas the country and each region disaggregated by sex. The distribution of paid employees in urban areas by sex and period of payment at country level is presented in Table 5.23. The distribution of paid employees of urban areas of the country classified by amount and period of payment and sex is presented in table 5.24. Paid employees population of urban areas of the country by major industrial divisions, sex and amount of payment per month has also shown in Table 5.25

5.7. Absence from Work

Employed persons that were considered to be absent from work were those who were not engaged in any productive activity or who work less than four hours during the seven days prior to the date of the interview but have formal job attachment. These persons were asked their main reason for being absent from work. Reasons for absence from work was classified as illness, holiday /vacation, Training/education, off-season, reduction in economic activity and “others” categories. The data presented in Table 5.26 indicates the distribution of employed population for their reasons for being absent from work by region and sex.

5.8. Availability to Work Additional Hours

This survey collected data on time related under employment in an attempt to capture the insufficiency of the hours of work of employed persons in relation to an alternative employment situation in which persons are willing and available to be engaged in. The response of employed persons depending on their availability and readiness or not to work for additional hours was coded as “yes” or “no”. The response for additional hours

available could be for another job (jobs) in addition to the current job; replacing any of current jobs by another job with increased hours of work or longer time on the current job.

The distribution of employed population whether they were available or ready to work additional hours for urban areas of the country by age group and sex is shown in Table 5.27. Table 5.28 shows distribution of employed persons who sought or available for work additional hours together with the actual number of hours worked by age group and sex for the total urban areas of the country. Table 5.29 present the distribution of urban employed population of each region who were sought or available for additional hours of work classified by type of work sought or available for and sex.

5.9. Formal and Informal Employment Sectors of the Economic Activity

For statistical purposes, the informal sector is regarded as a group of production units, which according to the definitions and classification provided in the United Nation System of National Accounts (SNA Rev.4), form part of the household sector as household enterprises or, equivalently, unincorporated enterprises owned by households. The informal sector is defined irrespective of the kind of work place where the productive activities are carried out, the extent of fixed capital used, the duration of the enterprise and its operation as main or secondary activity of the owner.

The figures here were not referring to the whole employed population. In this survey, according to the 15th ICLS recommendations, those employed persons who were engaged in subsistence farming and work in private households were exempted from the analysis of the formal and informal sectors of the economic activity.

This survey includes questions to identify the employment sector of the economy and some of the characteristics in which the employed persons are engaged in their main activity. However, employed persons whose employment status were classified as employee-government, employee-government parasitatal, employee-non-governmental organization, or members of producers' cooperative were not necessary to ask such

questions related to the activities of their sectors because they were considered as formal and later classified as being working in the formal sector. On the other hand, other employed persons whose employment status were employer, employee of private organization, self employed, and apprentice were asked the following questions whether the business /enterprise they were engaged in,

- a) is keeping book of account that show the monthly income statement and balance sheet; or
- b) has business/enterprise license.

Based on the response to these three questions classification on sector of economy was made as: formal, informal or “not – identified”. Employed persons who satisfy at least one of the above conditions were considered as working in the formal sector. For those who respond “no” for all of the three questions, the activity was taken as informal. For those who don't know the situation about their main activity/business/enterprise with respect to the above questions was labeled as “not – identified”.

Table 5.30 presents the distribution of employed population of urban areas of the country according to sector of the economy classified by age group and sex. The distribution of employed population by sector of economy, region and sex is presented in 5.31. Similar information for selected major town is shown in Table 5.32. Table 5.33-5.38 presents the cross classification of the informal sector by sex and region with some of the related variables, such as major occupation and sector of economy, mean number of hours of worked, educational attainment, size of workers and type of working place. The distribution of informal sector by type of difficulties they faced during their work at national level is also given in Table 5.39.

CHAPTER VI

SIZE AND RATE OF THE CURRENTLY URBAN UNEMPLOYED POPULATION

6.1. Introduction

This chapter presents the size and rate of unemployment categorized at national and regional urban levels. In addition, the distribution of unemployment in relation to age, sex, education, previous work experience... etc., are shown in detail. Even though, information regarding unemployment was collected based on the current and usual measurement approaches, the results presented in this chapter refers only to the current activity status approach. Those who were aged ten years and over were asked to report details questions on unemployment such as:

- a. whether seeking for employment if not reason for not seeking.
- b. whether available for work during the coming one month if not reason for not being available.
- c. type of job looking for /i.e. self employment or paid employment/
- d. type of problems faced to establish own business.
- e. previous work experience and duration of unemployment.

6.2. Measurement of Unemployment

The measurement of unemployment is based on the following three criteria that must be satisfied simultaneously: "without work", "currently available for work" and "seeking work" (ILO, 1983). The standard definition of unemployment is based on the "seeking work" criterion that can be interpreted as activity or efforts searching for job by non-working persons during a specified reference period or prior to it (i.e., paid or self employment). The specific steps include registration at a public or private employment exchange, application to employers, checking at worksites, farms, factory gates, market or other assembly places, placing or answering news paper advertisements, seeking assistance of friends or relatives, looking for land, building, machinery or equipment to establish own enterprise, arranging for financial resources, applying for work permits and licenses, etc.

However, It was felt that the standard definition of unemployment, in situations where the conventional means of seeking work are of limited relevance, where the labour market is largely unorganized or of limited scope, where labour absorption is, at the time inadequate or where the labour force is largely self-employed, the above standard definition of unemployment with its emphasis on seeking work criterion might be restrictive and might not fully capture the prevailing employment situations in many developing countries including Ethiopia.

Hence, the International standards introduced provisions, which allows for the relaxation of the seeking work criterion in certain situations. The provisions are two types, namely, partial relaxation and complete relaxation. Following the recommendations of the International standard and reviewing the prevailing national situations, the employment and unemployment and related surveys introduced a provision to capture the different forms of unemployment using the above alternative measurements. The treatment of the two options in the survey is described as follows.

Under partial relaxation, the definition of unemployment includes discouraged job seekers and future start and layoffs in addition to persons satisfying the standard definition. Discouraged job seekers are those who want a job but did not take any active step to search for work because they believe that they cannot find one. Future starts are those persons without work who have made arrangements to take up paid employment or to undertake self-employment activity at a date subsequent to the reference period. Layoffs are a person whose contract of employment or activity has been suspended by the employer for a specified or unspecified period at the end of which the person concerned has a recognized right or recognized expectation to cover employment with the employer (ILO, 1990).

Under the completely relaxed definition, unemployment includes persons without work and those who are available for work, including those who were or were not seeking work. That is, the seeking work criterion is completely relaxed and unemployment is based on the “without work” and “availability” criterion only. The availability in this

situation is tested by asking the willingness to take up work for wage or salary in locally prevailing terms, or readiness to undertake self-employment activity; given the necessary resources and facilities. It should be noted that fulltime students are considered as available if and only if they are ready to withdraw from their studies in order to accept a job.

This survey collected unemployment data in the standard, partially relaxed and completely relaxed options of measurements. After thorough evaluation and assessment of the results obtained using the three alternative and complementary measures; the rates obtained using the completely relaxed definition was found most plausible and hence selected for reporting. In this survey, those persons aged ten years and over who did not work at least four hours or did not have job to return to, were asked to respond whether they were available or willing to work if job was found during the coming one month. Those who responded “Yes” answer to this question were further tested whether they were ready to take a job under prevailing conditions.

6.3. The Size and Rate of Urban Unemployment

The magnitude of unemployed population is measured with the unemployment rate. The unemployment rate is computed as the percentage of the unemployed population over the total number of economically active population. The distribution of the current unemployed population and unemployment rate of urban areas of the country and regions aged ten years and over by age group, sex has shown in Table 6.1 and 6.1.1 - 6.1.11, respectively. The data in Table 6.2 and 6.2.1 - 6.2.15 refer to the distribution of currently unemployed population for the total major towns and selected major towns classified by age group and sex. Table 6.3 and 6.4 provide data on literacy status and educational attainment for the currently unemployed population of urban areas of the country and for each region by sex, while Table 6.5 shows the distribution urban unemployed population for each region by training status and types of training and sex. The distribution of unemployed persons of urban areas of the country disaggregated by marital status, age group and sex is presented in table 6.6. Table 6.7 shows similar information for each region classified by sex.

As defined above unemployed persons may or may not seek work. Unemployed persons who were looking for work during the three months prior to date of interview were asked to report what measures they have taken to seek work and type of work sought during this period. Accordingly, Table 6.8 presents the distribution of unemployed persons who were looking for work during the three months prior to the survey date by sex and step taken to seek work for urban areas of each region. Table 6.9 provides data on type of job looking for by sex and each region.

The distribution of unemployed persons of urban areas of the country categorized by age group sex, previous work experience and duration of unemployment is presented in table 6.10. The corresponding figure by sex and region is presented in Table 6.11. The distribution of unemployed persons according to the type of problems they faced by region and sex is shown in Table 6.12.

ANNEX II

Estimation Procedures of Total, Ratio and Sampling Errors

The following formulas were used to estimate the required variables by reporting levels.

1. Estimate of Total \hat{Y}_h in Major Urban Domain (Category I)

$$\hat{Y}_h = \sum_{i=1}^{n_h} \sum_{j=1}^{h_{hi}} W_{hi} Y_{hij}$$

Where,

$$W_{hi} = \frac{M_h H_{hi}}{n_h M_{hi} h_{hi}} \text{ is the basic sampling weight}$$

2. Estimate of Total \hat{Y}_h in Other Urban Domain (Category II)

$$\begin{aligned} \hat{Y}_h &= \sum_{i=1}^{n_h} \frac{M_h}{n_h n_{hi}} \sum_{j=1}^{n_{hi}} \frac{H_{hij}}{M_{hij} h_{hij}} \sum_{k=1}^{h_{hij}} Y_{hijk} \\ &= \sum_{i=1}^{n_h} \sum_{j=1}^{n_{hi}} \sum_{k=1}^{h_{hij}} W_{hij} Y_{hijk} \end{aligned}$$

Where,

$$W_{hij} = \frac{M_h H_{hij}}{n_h n_{hi} M_{hij} h_{hij}} \text{ is basic sampling weight}$$

The following notations were used in the formula:

M_h = Total number of households in stratum h obtained from the sampling frame.

M_{hi} = Total number of households in EA/PSU i for major urban domain or in urban center/PSU i for other urban domain, stratum h obtained from the sampling frame.

H_{hi} = Total number of households obtained from the survey listing in sample EA/PSU i stratum h for major urban domain.

h_{hi} = Total number of households successfully covered in EA/PSU i stratum h for major urban domain.

M_h = Total number of households of the domain in stratum h obtained from the sampling frame

n_h = Number of successfully covered urban centers for other urban domain / covered EAs for major urban domain in stratum h.

M_{hi} = Total number of households in EA/PSU i in stratum h obtained from the sampling frame

$h_{hi=}$ = Total number of sampled and covered households in sampled EA/PSU i , and stratum h

\hat{Y}_{hij} = The observed value of characteristic y for household j, in EA/PSU i, stratum h of Major Urban Domain

M_{hij} = Total number of households in EA/SSU j, urban centers/PSU i and stratum h obtained from the sampling frame for other urban center domain.

n_{hi} = Number of sample EAs successfully covered in urban center/PSU i and stratum h for other urban center domain.

H_{hij} = Total number of households obtained from the survey listing in EA/SSU j, urban center/PSU i and stratum h for other urban center domain

h_{hij} = Number of sample households successfully covered in EA /SSU j, urban center/PSU i and stratum h for other urban center domain.

Y_{hijk} = The observed value of a characteristic y for household k in EA/SSU j, urban center/PSU i and stratum h for other urban domain.

Note: Estimate of total at country level, \hat{Y} , is obtained by summing up stratum/domain total estimates.

$$\hat{Y} = \sum_h \hat{Y}_h$$

4. Sampling Variance of the Estimates:

Sampling variance of estimate of stratum total are given by the following formulas:

The variance of domain or reporting total estimate is:

$$Var(\hat{Y}_h) = (1 - f_h) \frac{n_h}{n_h - 1} \sum_{i=1}^{n_h} \left(\hat{Y}_{hi} - \frac{\hat{Y}_h}{n_h} \right)^2 + f_h \sum_{i=1}^{n_h} (1 - f_{hi}) \left(\frac{h_{hi}}{h_{hi} - 1} \right) \sum_{j=1}^{h_{hi}} \left(\hat{Y}_{hij} - \frac{\hat{Y}_{hi}}{h_{hi}} \right)^2$$

in which $\hat{Y}_{hi} = W_{hi} \sum_{j=1}^{h_{hi}} Y_{hij}$ for major urban centers domains,

and $\hat{Y}_{hi} = \sum_{j=1}^{n_{hi}} W_{hij} \sum_{k=1}^{h_{hij}} y_{hijk}$ for other urban center domain.

$$V(\hat{Y}) = \sum_h V(\hat{Y}_h)$$

$$SE(\hat{Y}_h) = \sqrt{Var(\hat{Y}_h)}$$

5. Coefficient of Variation (CV) and Confidence Interval (CI)

The following formulas were used to calculate CV and CI of the domain (reporting level) total.

The coefficient of variation (CV) of domain total in percentage is:

$$CV(\hat{Y}_h) = \frac{\sqrt{VAR(\hat{Y}_h)}}{\hat{Y}_h} * 100$$

and Ninety-five percent confidence interval (CI) of domain total:

$$\hat{Y}_h \pm 1.96 * SE(\hat{Y}_h)$$

6. Ratio Estimates:

$$\hat{R}_h = \frac{\hat{Y}_h}{\hat{X}_h} \text{ and } \hat{R} = \frac{\hat{Y}}{\hat{X}}$$

Where the numerator and the denominator are estimates of domain totals of characteristic y and x, respectively.

$$Var(\hat{R}_h) = \frac{1}{\hat{X}_h^2} \left[Var(\hat{Y}_h) + \hat{R}_h^2 Var(\hat{X}_h) - 2\hat{R}_h Cov(\hat{Y}_h, \hat{X}_h) \right]$$

In which

$$Cov(\hat{Y}_h, \hat{X}_h) = (1 - f_h) \frac{n_h}{n_h - 1} \sum_{i=1}^{n_h} \left(\hat{Y}_{hi} - \frac{\hat{Y}_h}{n_h} \right) \left(\hat{X}_{hi} - \frac{\hat{X}_h}{n_h} \right) + f_h \sum_{i=1}^{n_h} (1 - f_{hi}) \left(\frac{h_{hi}}{h_{hi} - 1} \right) \sum_{j=1}^{h_{hi}} \left(\hat{Y}_{hij} - \frac{\hat{Y}_{hi}}{h_{hi}} \right) \left(\hat{X}_{hij} - \frac{\hat{X}_{hi}}{h_{hi}} \right)$$

ANNEX III
